I know that items or portions of an item from an upcoming page will ghost at the bottom of a page. This is a problem with Adobe's piss poor programming. If someone wants to financially support the project, I will gladly make a PDF creating program that works.

A dictionary and other materials for nerds (including a lexicon of computer programming language reserved and keywords plus Table Top Role Playing Games).

The suffix *-ary* means “a thing belonging to or connected with.” So a nerdary is a book or other media belonging to or connected with nerds.

This work started as a dictionary of computer-related terms. I know it is absurd to think that I could reasonably complete this work, but Peter Mark Roget didn't release his Thesaurus until he was 73 years old (29 April 1852). He started work on it in 1805.

This work evolved into a nerdary when it changed from a single topic dictionary to a collection of information that I find useful and/or interesting. Hence, a nerdary.

Now including a section on Table Top Role Playing Games (TTRPG) in response to Hasbro ruining D&D.

I know that items or portions of an item from an upcoming page will ghost at the bottom of a page. This is a problem with Adobe's piss poor programming. If someone wants to financially support the project, I will gladly make PDF creating program that works.

When you see me criticize past actions, whether by a political party, a government, a religion, academia, or any other social entity, I am not criticizing or insulting you.

Permissions: Anyone may make private personal use of any of these materials.

Permissions: Professors, teachers, tutors, and other educational professionals, as well as accredited schools, may duplicate and distribute for free to students.

A little more than two decades ago, a brand new Wikipedia took at least five of my web pages and used them as their entire web page. Initially they gave my website credit, but they removed the credit after a year or two. Yes, they added to my materials, but they didn't remove my material when they took away my credit.

I am using materials from Wikipedia, but they give permission under their license. And unlike the rich people who run Wikipedia I am giving them credit, because I'm not rich, so I'm honest.

External links are marked like [this](#).

Images: I am making liberal use of the royalty free artwork at Pixabay. I am including all of the artist credits (although emojis are being dropped until I figure out how to get them into a PDF).

Wikis: Initially I intend to make use of information from Wikis, including Wikipedia, to quickly get initial information into the drafts of this book, but depending on how things move forward and your feedback, I may keep some amount of this material and just credit the correct source and license.

Game copyrights: I am going to quote here from the US Copyright Office:

Copyright does not protect the idea for a game, its name or title, or the method or methods for playing it. Nor does copyright protect any idea, system, method, device, or trademark material involved in developing, merchandising, or playing a game. Once a game has been made public, nothing in the copyright law prevents others from developing another game based on similar principles. Copyright protects only the particular manner of an author's expression in literary, artistic, or musical form.

Material prepared in connection with a game may be subject to copyright if it contains a sufficient amount of literary or pictorial expression. For example, the text matter describing the rules of the game or the pictorial matter appearing on

the gameboard or container may be registrable.

If your game includes any written element, such as instruction or directions, the Copyright Office recommends that you apply to register it as a literary work. Doing so will allow you to register all copyrightable parts of the game, including any pictorial elements. When the copyrightable elements of the game consist predominantly of pictorial matter, you should apply to register it as a work of the visual arts.

SDRs: I am including information from SDRs released by Wizards of the Coast under one of the Open Game Licenses.

I was placing the legal notice for d20 SDR Game System License after each quotation, but it adds too much extraneous repeated info, so now it is here just once:

It was edited and reformatted by The Bishop based on previous formats by Bombshell and the dynamic duo of Sage & Sovellor. The document has been further adapted by the [Dragon.ee crew](#).

Recipe copyrights: I am going to quote here from the US Copyright Office:

How do I protect my recipe?

A mere listing of ingredients is not protected under copyright law. However, where a recipe or formula is accompanied by substantial literary expression in the form of an explanation or directions, or when there is a collection of recipes as in a cookbook, there may be a basis for copyright protection. Note that if you have secret ingredients to a recipe that you do not wish to be revealed, you should not submit your recipe for registration, because applications and deposit copies are public records.

A recipe is a statement of the ingredients and procedure required for making a dish of food. A mere listing of ingredients or contents, or a simple set of directions, is uncopyrightable. As a result, the Office cannot register recipes consisting of a set of ingredients and a process for preparing a dish. In contrast, a recipe that creatively explains or depicts how or why to perform a particular activity may be copyrightable. A registration for a recipe may cover the written description or explanation of a process that appears in the work, as well as any photographs or illustrations that are owned by the applicant. However, the registration will not cover the list of ingredients that appear in each recipe, the underlying process for making the dish, or the resulting dish itself. The registration will also not cover the activities described in the work that are procedures, processes, or methods of operation, which are not subject to copyright protection.

Examples:

Jules Kinder submits an application to register a cookbook, *Pie in the Sky*. In the “Author Created” field of the application, Kinder asserts a claim in “text, photographs, and compilation of ingredients.” Each recipe contains a list of ingredients, instructions for making a pie, and a photograph of the finished product. The claim in a “compilation of ingredients” will not be accepted because there is no copyrightable authorship in a mere listing of ingredients. Since this claim is not acceptable, the Office may communicate with Jules Kinder to limit the extent of the registration to the text and photographs only.

Paulina Neumann submits an application to register a recipe for caesar salad dressing. In the “Author Created” field, Neumann asserts a claim in “text.” The work consists of a list of eleven ingredients with the following instructions: “(1) puree anchovies, garlic, Dijon, egg yolks; (2) drizzle oil in gradually to emulsify; (3) add lemon, parmesan cheese, salt, pepper, Worcester-shire and tabasco sauce.” The Office will refuse registration for this work, because the list of ingredients is uncopyrightable, and the instructional text contains an insufficient amount of creative authorship.

Artificial Intelligence copyrights: I am going to quote here from the US Copyright Office:

Copyright Registration Guidance: Works Containing Material Generated by Artificial Intelligence

AGENCY: U.S. Copyright Office, Library of Congress.

ACTION: Statement of policy.

SUMMARY: The Copyright Office issues this statement of policy to clarify its practices for examining and registering works that contain material generated by the use of artificial intelligence technology.

DATES: This statement of policy is effective March 16, 2023.

FOR FURTHER INFORMATION CONTACT: Rhea Efthimiadis, Assistant to the General Counsel, by email at meft@copyright.gov or telephone at 202-707-8350.

SUPPLEMENTARY INFORMATION:

I. Background

It will take me some time to get this moved over. The main point is that AI generated material is not copyrightable. All AI generated material in this work is clearly identified and is excluded from any copyright claims.

The Copyright Office (the “Office”) is the Federal agency tasked with administering the copyright registration system, as well as advising Congress, other agencies, and the Federal judiciary on copyright and related matters.^[1] Because the Office has overseen copyright registration since its origins in 1870, it has developed substantial experience and expertise regarding “the distinction between copyrightable and noncopyrightable works.”^[2] The Office is empowered by the Copyright Act to establish the application used by applicants seeking registration of their copyrighted works.^[3] While the Act identifies certain minimum requirements, the Register may determine that additional information is necessary for the Office to evaluate the “existence, ownership, or duration of the copyright.”^[4] Because the Office receives roughly half a million applications for registration each year, it sees new trends in registration activity that may require modifying or expanding the information required to be disclosed on an application.

One such recent development is the use of sophisticated artificial

intelligence (“AI”) technologies capable of producing expressive material.^[5] These technologies “train” on vast quantities of preexisting human-authored works and use inferences from that training to generate new content. Some systems operate in response to a user’s textual instruction, called a “prompt.”^[6] The resulting output may be textual, visual, or audio, and is determined by the AI based on its design and the material it has been trained on. These technologies, often described as “generative AI,” raise questions about whether the material they produce is protected by copyright, whether works consisting of both human-authored and AI-generated material may be registered, and what information should be provided to the Office by applicants seeking to register them.

II. The Human Authorship Requirement

III. The Office's Application of the Human Authorship Requirement

IV. Guidance for Copyright Applicants

A. How To Submit Applications for Works Containing AI-Generated Material

B. How To Correct a Previously Submitted or Pending Application

V. Conclusion

This policy statement sets out the Office’s approach to registration of works containing material generated by AI technology. The Office continues to monitor new factual and legal developments involving AI and copyright and may issue additional guidance in the future related to registration or the other copyright issues implicated by this technology.

introduction

personal introduction

A dictionary and other materials for nerds (including a lexicon of computer programming language reserved and keywords plus instruction on how to write code and Table Top Role Playing Games).

The suffix *-ary* means “a thing belonging to or connected with.” So a nerdary is a book or other media belonging to or connected with nerds.

This work started as a dictionary of computer-related terms. I know it is absurd to think that I could reasonably complete this work, but Peter Mark Roget didn't release his Thesaurus until he was 73 years old (29 April 1852). He started work on it in 1805.

Now including a section on Table Top Role Playing Games (TTRPG) in response to Hasbro ruining D&D.

the reason you will probably hate me and what I say:

Members of the American Nazi, Democratic, Libertarian, and Republican parties (including paid spokespersons of the Democratic Party) have used eugenics slurs (idiot, imbecile, moron, etc.) and some have specifically called for my imprisonment or execution for the views I express. This is common.

Eugenics is the claim that science shows that society is improved by sterilizing or executing those with so-called defective genes.

Eugenics was created by Francis Galton, popularized by Andrew Carnegie, and taken to its logical extreme by Adolf Hitler.

While some large groups of people (such as the Romani, the Jews, Native Americans, Black people, and Hispanic people) have been the targets of eugenics, the first target is always those who are considered “deformed”, mentally handicapped, or physically handicapped.

One particular target is those who have autism. The term Asperger’s Syndrome as a description of mild autism has been dropped by the medical field because it comes from Nazi Doctor Hans Asperger, who invented the Nazi demarcation line between those who have mild enough autism to just be sterilized and those whose autism is severe enough that they must be executed.

The US Supreme Court’s 2 May 1927 *Buck vs. Bell* decision [*Buck v. Bell*, 274 U.S. 200, 47 §. Ct. 584, 71 L. Ed. 1000 (1927)] upheld a Virginia law that provided for the eugenic sterilization of people considered genetically unfit. This was before Hitler even came into power.

Eugenics is a form of genocide, as defined in Article II (d) of the Convention on the Prevention and Punishment of the Crime of Genocide (the entire treaty is included in this book).

International Genocide Treaty

The US Supreme Court’s 1 June 1942 *Skinner vs. Okoma* decision [*Skinner v. Oklahoma ex rel. Williamson*, 316 U.S. 535 No. 782 (1942)] said that because procreation is a fundamental right, the state can’t require the sterilization of criminals convicted of certain crimes. The court did not eliminate forced sterilizations, but required that court ordered sterilization be subject to the requirements of strict scrutiny.

The US Supreme Court’s 28 March 1978 *Stump v. Sparkman* decision [*Stump v. Sparkman*, 435 U.S. 349 No. 76-1750 (1978)] said that a woman sterilized by court order while a teenager and without her knowledge or right to appear in court on her own behalf can not sue the judge under judicial immunity because court ordered sterilization is a **duty** of a judge and even if improperly exercised, the victim can not sue the judge.

Let me emphasize that every judge accepted the duty to commit human genocide when they accepted the judicial office of judge.

I have autism. I am one of the people that Hitler and every judge in the United States wanted sterilized or executed.

Deep hatred of neurodivergent people like me is deeply embedded into society.

When I was growing up as a child, other children would routinely assert that I should never have children because I was “weird”.

Members of the American Nazi, Democratic, Libertarian, and Republican parties (including paid spokespersons of the Democratic Party) have used eugenics slurs (idiot, imbecile, moron, etc.) and some have specifically called for my imprisonment or execution for the views I express.

I am officially subhuman and do not qualify as a legally valid person (unlike a legally valid corporate person, I have not submitted paperwork, paid a fee, and received government permission to be a person and we know from the Supreme Court's *Scott v. Sandford* case that judges and lawyers oppose the personhood of oppressed minorities) nor as a member of the human species (see Adolph Hitler's *Mein Kampf*).

My direct family lineage includes several European nationalities, as well as Jewish, Black, Asian, and Native American. And my personal religion is a form of Witchcraft (Kemetic) that major Abrahamic religions consider a death penalty offense against their deity.

So, don't be surprised when you see a bunch of opinions that make you want to call for me to be tortured, imprisoned, or killed.

At the time of this writing, a Google search on Milo's Nerdary (by specific name) will not show the existence of this PDF. Elon Musk changed the algorithm on Twitter so that my tweets are buried because he claims that my poverty means I am not a verified human.

When people hear me speak out against the Democrats, they accuse me of being fascist or Republican. When people hear me speak out against the Republicans, they accuse me of being Marxist or Democrat. I oppose all of America's far right political parties, including the American Independent, American Nazi, Constitution, Democrat, Libertarian, and Republican.

Computers are logic machines. A program must be mathematical truth to work properly. I hope for a day when all societies are based on truth.

Comment from Milo: I don't have money. A close friend, Annie, is going through some horrible times. I need to gather some money to help her.

I do have programming and writing skills. I am gathering together materials I previously created and writing a whole bunch of new stuff, including lessons on how to program computers.

I am giving those lessons away for free. You can contact me directly through the contact form at the Twitter account [@TSOStheband](#) (which includes a lot of different subjects, including political views you may despise). My hope is to generate enough interest in this electronic PDF book that enough people will see it that a small portion will be willing to donate at [Help Annie GoFundMe page](#).

The lessons are free. Donations are completely optional. None of the money is for me, all of it is for Annie. She is a fantastic person. She really is.

IMPORTANT NOTE:

From [Help Annie GoFundMe page](#):

I'm Jeff, and I'd like to help a friend, Annie, who is suffering from depression and recovering from domestic abuse. She is having a tough time keeping a roof over her head, and is scheduled to be evicted on Monday or Tuesday. So I'm trying to raise money so she can move out from the motel and get into something more stable.

She's in the state of Virginia, and me and another friend of hers (Milo) are in California and are trying to raise money to, 1 - keep a roof over her head, and 2 - get her into a better place. The Virginia Rent Relief Program was going to pay her rent, but fell through at the last

minute because they won't pay for a motel.

So, the most immediate problem is paying for her motel, which is \$312 a week. Then she needs help with a first and last, etc... to move into something more stable.

I've suffered from severe depression before, and I know how horrible it is. I'd love to pay for everything, but I'm only barely getting by myself. So I'm asking for help for her.

Thank you for your time, and anything you can do to help her!

The word “a” is an indefinite article in English. It is used before singular nouns that begin with a consonant sound. Here are some common definitions and uses of the word “a”: [ChatGPT]

1. **Indefinite article:** “A” is used to indicate a non-specific or general item or person. It implies that the noun it modifies is one of many. For example: [ChatGPT]
 - “I saw a car on the street.” [ChatGPT]
 - “She adopted a cat from the shelter.” [ChatGPT]
 - “He is a doctor.” [ChatGPT]
2. **One or any:** “A” can be used to mean “one” or “any” when referring to a single instance or example of something. For example: [ChatGPT]
 - “Give me a pencil.” [ChatGPT]
 - “She wants to buy a house.” [ChatGPT] [Human response: bad example]
 - “He needs a break.” [ChatGPT] [Human response: bad example]
3. **Emphasizing uniqueness:** In certain contexts, “a” can be used to emphasize the uniqueness or rarity of something. For example: [ChatGPT] [Human response: questionable assertion]
 - “She is a gem of a person.” [ChatGPT]
 - “That was a once-in-a-lifetime experience ” [ChatGPT]

Before consonant sounds: “A” is used before singular nouns that begin with a consonant sound, regardless of whether the actual letter is a consonant or a vowel. For example, “a book,” “aa university,” and “a European country.” It’s important to note that the word “a” changes to “an” before singular nouns that begin with a vowel sound. For example, “an apple,” “an hour,” and “an honest person.” [ChatGPT]

A+

programming language

year created: 1985 by Arthur Whitney at Morgan Stanley.

A plus

From the Wikipedia page on [A+ \(programming language\)](#)

A+ is an array programming language descended from the programming language A, which in turn was created to replace [APL](#) in 1988. Arthur Whitney developed the A portion of A+, while other developers at Morgan Stanley extended it, adding a graphical user interface and other language features. A+ is a high-level, interactive, interpreted language, designed for numerically intensive applications, especially those found in financial applications. A+ runs on many Unix variants, including Linux. It is free and open source software released under a GNU General Public License.

A+ provides an extended set of functions and operators, a graphical user interface with automatic synchronizing of widgets and variables, asynchronous executing of functions associated with variables and events, dynamic loading of user compiled subroutines, and other features. A newer graphical user interface has not yet been ported to all supported platforms.

The A+ language implements the following changes to the APL language:

- an A+ function may have up to nine formal parameters
- A+ code statements are separated by semicolons, so a single statement may be divided into two or more physical lines
- The explicit result of a function or operator is the result of the last statement executed
- A+ implements an object called a dependency, which is a global variable (the dependent variable) and an associated definition that is like a function with no arguments. Values can be explicitly set and referenced in exactly the same ways as for a global variable, but they can also be set through the associated definition.

Interactive A+ development is primarily done in the Xemacs editor, through extensions to the editor. Because A+ code uses the original APL symbols, displaying A+ requires a font with those special characters; a font named kapl is provided on the web site for that purpose.

A-0 System

programming language

year created: 1951, 1952 by Grace Hopper.

From the Wikipedia page on [A-0 System](#)

A-0 system (*Arithmetic Language version 0*), written by Grace Murray Hopper in 1951 and 1952 for the UNIVAC I, was an early compiler related tool developed for electronic computers. The A-0 functioned more as a loader or linker than the modern notion of a compiler. A program was specified as a sequence of subroutines and its arguments. The subroutines were identified by a numeric code and the arguments to the subroutines were written directly after each subroutine code. The A-0 system converted the specification into machine code that could be fed into the computer a second time to execute the said program.

A single aardvark can eat 50,000 to 60,000 ants and termites in one night.

Aarvarks are good swimmers.

abacus

æb'-ə-kəs (Received Pronunciation, General American)

noun

plural **abaci** or **abacuses**

An instrument for performing calculations, usually a rectangular frame with rows of wires, rods, or grooves along which beads, balls, or pebbles are slid. Each wire or groove designates a denomination, such as units, tens, hundreds, etc (decimal system), and each bead represents a digit or a specific nuber of digits (such as representing five).

etymology: 1387 CE Middle English *abacus* from Latin: sandboard abacus, counting board, from Greek ἄβαξ (*ábax*): board covered with sand for tracing calculations, genitive form ἄβακος (*abakos*), from Phoenician, related to Hebrew אֲבָחָא (*abhaq*), dust

Chinese: 算盤

French: l' abaque

German: der abakus

Russian: счеты

Spanish: ábaco

A user of an abacus is called an *abacist*.

From the Wikipedia page on [Abacus](#)

The **abacus** (plural **abaci** or **abacuses**),

also called a **counting frame**, is a calculating tool which has been used since ancient times. It was used in the ancient Near East, Europe, China, and Russia, centuries before the adoption of the Hindu-Arabic numeral system. The exact origin of the abacus has not yet emerged. It consists of rows of movable beads, or similar objects, strung on a wire. They represent digits. One of the two numbers is set up, and the beads are manipulated to perform an operation such as addition, or even a square or cubic root.

In their earliest designs, the rows of beads could be loose on a flat surface or sliding in grooves. Later the beads were made to slide on rods and built into a frame, allowing faster manipulation. Abacuses are still made, often as a bamboo frame with beads sliding on wires. In the ancient world, particularly before the introduction of positional notation, abacuses were a practical calculating tool. The abacus is still used to teach the fundamentals of mathematics to some children, e.g., in post-Soviet states.

Designs such as the Japanese soroban have been used for practical calculations of up to multi-digit numbers. Any particular abacus design supports multiple methods to perform calculations, including the four basic operations and square and cube roots. Some of these methods work with non-natural numbers (numbers such as 1.5 and $\frac{3}{4}$).

Although calculators and computers are commonly used today instead of abacuses, abacuses remain in everyday use in some countries. Merchants, traders, and clerks in some parts of Eastern Europe, Russia, China, and Africa use abacuses. The abacus remains in common use as a scoring system in non-electronic table games. Others may use an abacus due to visual impairment that prevents the use of a calculator.

Abbe condenser

“The Abbe condenser is named for its inventor Ernst Abbe, who developed it in 1870. The Abbe condenser, which was originally designed for Zeiss, is mounted below the stage of the microscope. The condenser concentrates and controls the light that passes through the specimen prior to entering the objective. It has two controls, one which moves the Abbe condenser closer to or further from the stage, and another, the iris diaphragm, which controls the diameter of the beam of light. The controls can be used to optimize brightness, evenness of illumination, and contrast. Abbe condensers are difficult to use for magnifications of above 400X, as the aplanatic cone is only representative of a numerical aperture (NA) of 0.6.” —[Wikipedia](#)

Abbe number

“In optics and lens design, the Abbe number, also known as the V-number or constringence of a transparent material, is an approximate measure of the material’s dispersion (change of refractive index versus wavelength), with high values of V indicating low dispersion.” —[Wikipedia](#)

ABC

abbreviation

programming language

From the Wikipedia page on [ABC \(programming language\)](#)

ABC is an imperative general-purpose programming language and integrated development environment (IDE) developed at Centrum Wiskunde & Informatica (CWI), Netherlands by Leo Geurts, Lambert Meertens, and Steven Pemberton. It is interactive, structured, high-level, and intended to be used instead of BASIC, Pascal, or AWK. It is intended for teaching or prototyping, but not as a systems-programming language.

ABC had a major influence on the design of the language Python, developed by Guido van Rossum, who formerly worked for several years on the ABC system in the mid-1980s.

Features

Its designers claim that ABC programs are typically around a quarter the size of the equivalent Pascal or C programs, and more readable. Key features include:

- Only five basic data types
- No required variable declarations
- Explicit support for top-down programming
- Statement nesting is indicated by indentation, via the off-side rule
- Infinite precision arithmetic, unlimited-sized lists and strings, and other features supporting orthogonality and ease of use by novices

ABC was originally a monolithic implementation, leading to an inability to adapt to new requirements, such as creating a graphical user interface (GUI). ABC could not directly access the underlying file system and operating system.

The full ABC system includes a programming environment with a structure editor (syntax-directed editor), suggestions, static variables (persistent), and multiple workspaces, and is available as an interpreter-compiler. As of 2020, the latest version is 1.05.02, and it is ported to Unix, DOS, Atari, and Apple

MacOS.

abortion

“If the government can keep you from getting an abortion, they can also require it.” —Sandra Day O'Connor

The US Supreme Court has repeatedly upheld the right for judges to order the sterilization of autistic people and others that are deemed to be mentally or physically deficient by the standards of Francis Galton, Andrew Carnegie, and Adolf Hitler.

Forced sterilization is one of the five acts named in the definition of genocide in the international treaty Convention on the Prevention and Punishment of Genocide.

The US Supreme Court has upheld that judges can not be sued for issuing secret sterilization orders without a trial or a chance for the victim or the victim's family to protest or respond, calling literal genocide a judicial duty.

Joe Biden voted to allow states to overturn *Roe v. Wade* and in 1974 said “Women don't have sole right to say what should happen to their bodies.”

“I don't like the Supreme Court decision on abortion. I think it went too far. I don't think a woman has the sole right to say what should happen to her body.” —Joe Biden, 1974

“Despite professing support for the right to have an abortion, the Democratic Party has failed to take the long-term legislative steps that would provide federal protection.” —Cornel West

Jimmy Carter and the Democrats had a supermajority in Congress from 1977-1979 and a majority from 1979-1981. Did not codify *Roe v Wade* into law.

Bill Clinton and the Democrats had a full majority from 1993-1995. Did not codify *Roe v Wade* into law.

Barack Obama and the Democrats had a supermajority for 72 days and a full majority from 2009-2011 plus independents who agreed to vote for the Freedom of Choice Act. Obama campaigned on the promise of codifying *Roe v Wade* “first thing ” after winning the election. Did not codify *Roe v Wade* into law. A few days after being sworn in as president, Obama said it was not his “highest legislative priority.”

Donald Trump in 2016 called for “some form of punishment” for abortion.

During the first two years of Joe Biden's presidency, the Democrats had a full majority of both houses of Congress.

The Democrats passed the bill to codify *Roe* into law in the House of Representatives.

In addition, two Republican senators were co-authors of the bill to codify Roe into law.

Joe Biden put political pressure on Senate Democrats to avoid bringing the bill up for a vote.

In addition to Joe Biden's personal opposition to legalized abortion, the Democrats believe they can use the issue for fund raising to gather far more money than they could gather if they actually followed through on their promise to protect a woman's right to choose.

Both Bill Clinton and Barack Obama campaigned on codifying Roe into law, Obama promising to make it his first presidential action. Both abandoned the topic after being elected president.

Despite this record of failure, the Democrats have been fund raising for decades on a promise to codify Roe v Wade without ever taking action. It has been the single biggest money making promise.

PRESS RELEASE 3/17/2023

Discontinuation of Labor & Delivery Services at Bonner General Hospital

Bonner General Health's commitment to patient safety drives our decisions in the available services we can provide to our community, even with the most challenging choices having to be made. Therefore, Bonner General Health's Board of Directors and Senior Leadership team has made the emotional and difficult decision to discontinue providing Obstetrical services at Bonner General Health for the following reasons:

Loss of Pediatrician coverage - Without pediatrician coverage to manage neonatal resuscitations and perinatal care, it is unsafe and unethical to offer routine Labor and Delivery services; despite our best efforts over months of negotiations. Our inpatient pediatric services will no longer be consistent and reliable in May. BGH has reached out to other active and retired providers in the community requesting assistance with pediatric call coverage with no long-term sustainable solutions. Our low patient volume is insufficient to attract candidates for pediatric hospitalists, and we cannot afford to continue having locum tenens physicians.

Volumes and changing demographics – The number of deliveries at BGH has continued to decrease yearly. We delivered 265 babies in 2022 and admitted less than ten pediatric patients for other reasons. There are many reasons, including a nationwide decrease in births, an older population moving to Bonner County, and Kootenai Health having a new, updated unit with Neonatologists and OBs in-house 24/7.

Idaho's legal and political climate - Highly respected, talented physicians are leaving. Recruiting replacements will be extraordinarily difficult. In addition, the Idaho Legislature continues to introduce and pass bills that criminalize physicians for medical care nationally recognized as the standard of care. Consequences for Idaho Physicians providing the standard of care may include civil litigation and criminal prosecution, leading to jail time or fines.

acoustic treatment

10 January 2024: “How acoustic treatment affects the sound?

I had a chance to listen to inexpensive monitors, Kali LP6, in an average untreated bedroom (I mean it wasn't empty with lots of echo, it was just normal), and then in a very expensive proper acoustic environment

In untreated room I achieved very linear frequency response, using measurement microphone and Room EQ Wizard

But in proper treated room, the difference in sound was so drastic that it's impossible to even describe

Sound was so big and physical. It seemed like you can touch the objects with your hand and the soundstage was excellent. The definition and clarity were on another level. Sounded much more close to expensive monitors.

The difference between treated and untreated was I don't know, 10x? It was totally different so hard even to compare.

And I remind you, the frequency response was linear in both cases.

This is another reminder that your room is A PART of your monitoring system. It sounds. It really does.

If your room still has issues, upgrade it, and only then purchase new monitors. Otherwise, money I wouldn't say wasted, but spent with much smaller efficiency.

Acoustic treatment is not that expensive as you might think, if you are not trying to achieve very fancy looks. And especially if you are ready to work with your hands.” —[Nathaniel W.](#)

Africa

5 August 2023: “ ‘The French economy cannot survive without Africa’ is total nonsense
Ireland has one of the highest GDP per capita and has no colonies.

The big corporations that are in the hands of the globalists, not France, will not survive.

All resources in Africa are exploited by private companies, owned by French, American and British billionaires and politicians who lead these countries. For example, these companies paid \$11 million to Niger for the uranium, and then charged France (taxpayers' money) \$230 million.

Since most politicians in France have shares in these companies, they use the French military as their private security company. They send the french military to Africa to secure the mines for free, because the state pays for them.

Due to the exploitation, the population in Africa is terribly poor and huge waves of refugees are created towards Europe and even more pressure is created on the backs of the European and French economies.

Exploitation has a terrible negative impact on France, not the other way around.

Now with the cessation of uranium from Niger, private companies will not be able to exploit, but France will continue to pay the same amount, let's say to Australia.

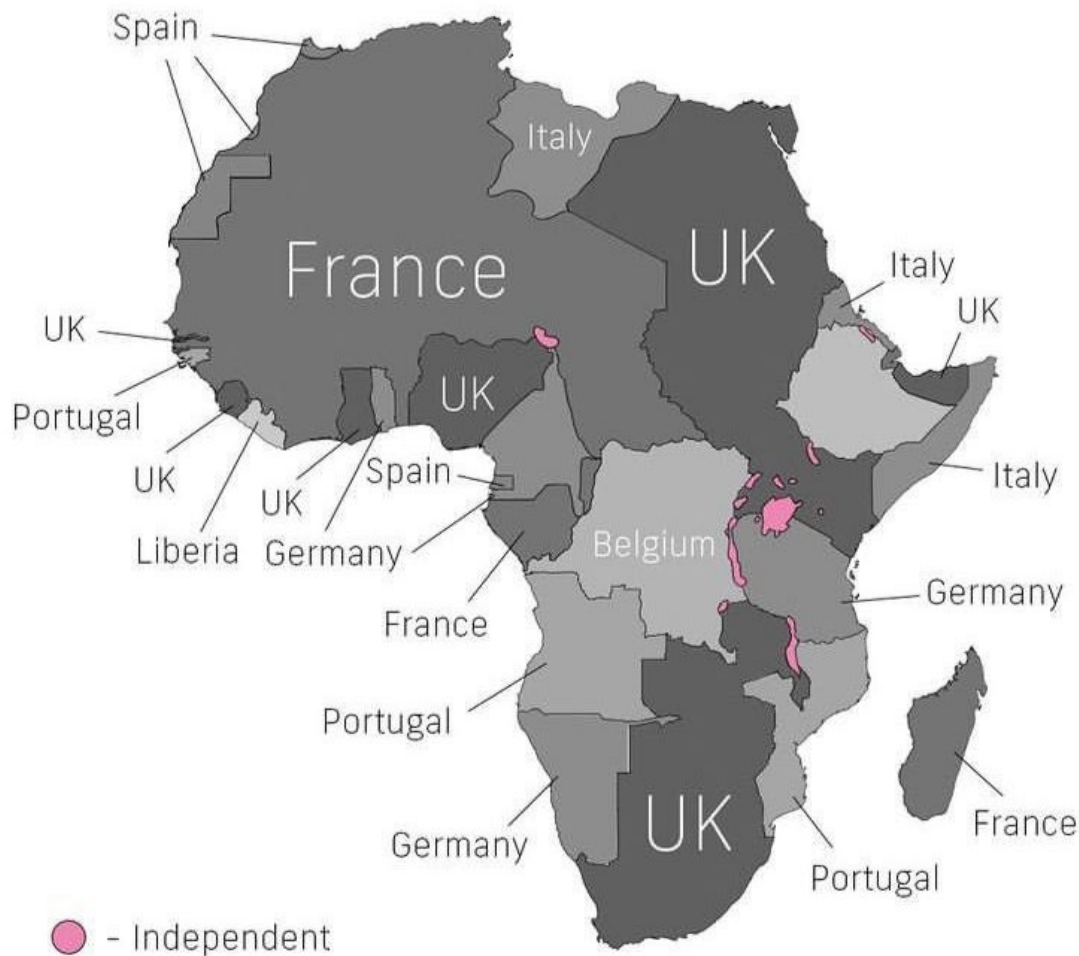

Who is losing here?

EUROPEAN CONTROL OVER AFRICA 1914

28 August 2023: “The EU is set to launch a new mission in West Africa in the fall, a German newspaper has reported. The combined military-civilian operation will aim to prevent instability triggered by jihadi groups.

European Union member states have agreed to begin a mission in the Gulf of Guinea in West Africa, with police and soldiers deployed to Ghana, Togo, Benin and Ivory Coast, German newspaper *Die Welt am Sonntag* reported on Sunday, citing diplomats.

According to the paper, the mission will aim to train and advise local security forces, help prepare for anti-terror operations, give technical support and implement confidence-building measures in the security sector.

The mission is to be launched after formal approval is given by EU foreign ministers at a meeting in October in Luxembourg.

The reason behind the planned mission is the EU’s concern that Islamist groups “could extend their activities in West Africa from the Sahel zone toward the southern coastal countries on the

Gulf of Guinea, leading to even more widespread instability in the region,” Welt am Sonntag reported.

Militant activity from extremist groups linked to “Islamic State” and al-Qaidahave rocked countries such as Mali, Niger and Burkina Faso in recent years.

The EU also wants to counter Russian influence in the region which has been spread through Wagner mercenaries who have supported military regimes in the Sahel.Ê

The situation was further complicated for the EU after Mali kicked out French and German forces that had been training Malian soldiers and police.

Benin and Ghana had already officially invited the EU to deploy the mission on their territories, according to the paper.

The report comes as several countries in the region have fallen under military governments following coups, the latest being on July 26 in Niger. Military juntas have also taken power in Mali and Burkina Faso.

The fall of Niger to junta control has been especially concerning as it had been a key ally to Western powers operating throughout the region.

KEY TAKEAWAYS:

- They’re deploying “Police and soldiers” on African soil!???
- Mission will be launched after formal approval is given by EU foreign ministers!
- Benin Republic and Ghana had already officially invited the EU to deploy the mission on their territories???

Wait! What??? Okay, if you have followed my reporting long enough, you must have heard me say it over and over again, that AFRICA is the new Ukraine for them. One of the first reports I published over the Niger crisis detailed what you’re now reading in this exclusive report. I made it clear that this is all about the battle between RUSSIA and the west and the fact that RUSSIA has chosen to throw its weight behind Africans in their quest to break lose from colonial enslavement. The battlefield has shifted and if you ever doubted that, there you have it.

The effrontery to send Police and Soldiers to our continent when we are not living in slavery era is enough to help you see what an incredibly historic time we live in, as AFRICANS. It’s a generational TURNING POINT. The west is losing big. Everywhere you turn, they’re losing. Even their own world bank just reported that Russia’s GDP has surpassed that of Europe amidst sanctions! And now they’re also losing AFRICA, which has been their sole provider. It’s fight to finish and God will not forgive any one on the continent who makes it easy for colonizers to continue to entrench themselves on the continent of AFRICA.

Africans! Let’s wake up en masse and be vigilant. This has got to STOP! If we were treated so well, there would be no Russian Wagner on the continent of AFRICA. To beat Africans for generations and tell them not to cry is the height of maniacal arrogance. My confidence is that THIS IS OUR TIME and no force on earth can defeat an IDEA whose time has come. Africans will resist this with everything in them.

11 August 2023: “All coding projects have two parts:

1. The fun part: where you get to “create”
2. The pain part: where you have to debug

Code LLMs are ‘automating’ the fun parts while introducing bugs and not helping much with debugging. As a developer, you’re left with more pain to deal with.

This is the main reason why devs, even with moderate experience, are hesitant to use code-gen tools.

Some parts of creation (“fun”) can be painful because of boilerplate code. However, the solution to boilerplates is not LLMs but the right kinds of abstractions and good programming languages.

Figuring that out is actually quite fun for most devs, and they won’t mind spending keyboard time on that.

So if you are selling stuff to developers, similar to any other customer, focusing on what they really want can set your product a mile apart from the competition.

If you think CoT variants help, that’s not true.” — [Delip Rao e/σ](#)

Alaska LNG project

President Joe Biden approved the \$38,000,000,000 Alaska LNG gas project on 14 April 2023.

The project includes 807 miles of pipeline, a gas treatment plant, a liquefaction facility, and an LNG terminal that will process 20,000,000 metric tons of gas per year.

Burning those 20,000,000 metric tons of gas will release 50,000,000 metric tons of carbon dioxide into the atmosphere.

This project alone will by itself raise Alaska's fossil fuel emissions by more than 30%.

There are always gas leaks. The gas leaks of methane are 28-86 times stronger than carbon

dioxide as a greenhouse gas.

The intent is to sell all of the gas produced to Asia.

Biden's project will have a lifetime of decades, at least 30 years.

489 new roads will be built across land previously untouched by human activity, devastating wildlife.

Aleppo

Aleppo, Syria, is about 6,300 years old.

14 October 2023: “The Israeli military’s recent offensive on the ancient and historically significant city of Aleppo in Syria represents an egregious transgression against international norms and human heritage. Aleppo, revered as one of the world’s oldest continuously inhabited cities, possesses a rich tapestry of cultural, architectural, and historical significance that transcends national boundaries. The repercussions of such actions are manifold, as this indiscriminate bombing not only exacerbates regional instability but also threatens to obliterate invaluable heritage, diminish cultural diversity, and deepen hostilities in an already volatile region. A more prudent course of action, rooted in diplomacy and respect for international law, should be sought to avert further devastation and promote the preservation of our shared human heritage.” —[Amazon Guy](#)

Texas police confirm Allen Mall shooter was neo-Nazi

by Jacob Crosse 10 May 2023

In the first press conference held by police officials since Saturday's massacre at the Allen, Texas mall, Dallas Public Safety Regional Director Hank Sibley confirmed on Tuesday that the 33-year-old gunman, Maucio Garcia, had a "neo-Nazi ideation."

The mass shooting left eight people dead, including a three-year-old, eight-year-old and 11-year-old.

Elon Musk doubled down on his claims that there's no evidence the Allen, Texas, mall shooter had white supremacist beliefs, and that @bellingcat "does psy-ops" professionally.

The word “and” is a conjunction used to connect words, phrases, clauses, or sentences. It is one of the most common and versatile words in the English language. Here are some common definitions and uses of the word “and”: [ChatGPT]

1. **Conjunction of addition:** “And” is used to add or join two or more similar or related elements. For example: [ChatGPT]
 - “I like to read books and watch movies.” [ChatGPT]
 - “John and Mary went to the park.” [ChatGPT]
 - “The dog is black and white.” [ChatGPT]
2. **Conjunction of alternatives:** “And” can also be used to present alternatives or choices.

For example: [ChatGPT]

- “Would you like tea or coffee?” [ChatGPT] [Note added by human: that is the word “or”, not the word “and”.]
 - “He can choose between staying home and going out.” [ChatGPT]
3. **Conjunction of sequence or continuation:** “And” is used to indicate a sequence of events or a continuation of an action. For example: [ChatGPT]
 - “He woke up, brushed his teeth, and got dressed.” [ChatGPT]
 - “She studied hard, and she passed the exam.” [ChatGPT]
 4. **Conjunction of contrast or opposition:** In some cases, “and” can be used to express a contrast or opposition between two ideas or statements. For example: [ChatGPT]
 - “She is intelligent and humble.” [ChatGPT]
 - “The weather is sunny and cold.” [ChatGPT]
 5. **Conjunction of cause and effect:** “And” can be used to show a cause and effect relationship between two clauses or statements. For example: [ChatGPT]
 - “He studied hard, and he got good grades.” [ChatGPT]
 - “She trained regularly, and she became a skilled athlete.” [ChatGPT]
 6. **Conjunction of agreement or similarity:** “And” can be used to express agreement or similarity between two ideas or statements. For example: [ChatGPT]
 - “I love ice cream, and my sister does too.” [ChatGPT]
 - “The movie was funny, and the audience laughed.” [ChatGPT]
 7. **Conjunction in compound subjects or objects:** “And” is used to join two or more subjects or objects within a sentence. For example: [ChatGPT]
 - “Tom and Jerry are friends.” [ChatGPT]
 - “She bought apples, oranges, and bananas.” [ChatGPT]

It’s important to note that the function of “and” can vary depending on the context and the relationship between the elements it connects. [ChatGPT]

a priori argument

The A Priori Argument (also, Rationalization; Dogmatism, Proof Texting.): A corrupt argument from logos, starting with a given, pre-set belief, dogma, doctrine, scripture verse, “fact” or conclusion and then searching for any reasonable or reasonable-sounding argument to rationalize, defend or justify it. Certain ideologues and religious fundamentalists are proud to use this fallacy as their primary method of “reasoning” and some are even honest enough to say so. E.g., since we know there is no such thing as “evolution,” a prime duty of believers is to look for ways to explain away growing evidence, such as is found in DNA, that might suggest otherwise. See also the Argument from Ignorance. The opposite of this fallacy is the Taboo.

Argentina

nation

8 September 2023: “Argentina’s far-right “libertarian” candidate Javier Milei clearly calls, in his platform, for many authoritarian state policies:

- “militarization of the institutions during the transition period”
- building for-profit “public-private” prisons
- making it much easier to imprison people
- mandating forced labor for prisoners

- reducing the age of being considered a minor
 - creating a nationwide surveillance network of cameras with facial recognition technology
- Milei's political program is Pinochet's. He is a fascist." — [Ben Norton](#)

Por todo lo expuesto desde La libertad avanza proponemos para encausar lo que a seguridad de refiere los puntos que a continuación detallamos.

- 1- Construcción de establecimientos penitenciarios (alcaldías y cárceles) por sistema de gestión público-privada.
- 2- Militarización de los institutos durante el período de transición a fin de recomponer el sistema, particularmente en lo a que hace a su personal.
- 3- Reformulación de la legislación penitenciaria eliminando los salarios de los reclusos. La recepción de remuneración durante la estadía carcelaria podrá estar solamente relacionada a la participación en trabajos organizados en la cárcel, tendrán la obligación de realizar trabajos y/o estudios dentro de los institutos penales a fin de sostenerse económicamente y capacitarse para su reinserción social.
- 4- Estudiar la factibilidad de reducir la edad de imputabilidad de los menores.
- 5- Agilizar los procesos penales que tanto demoran en la justicia.
- 6- Impulsar el tratamiento de proyectos en las cámaras para eliminar de la legislación penal clausulas garantistas.
- 7- Saneamiento de todas las fuerzas de seguridad, haciendo eje en la lucha contra la corrupción.
- 8- Coadyuvar para que las fuerzas de seguridad vuelvan a tener autoridad profesional y moral, capacitando y equipando a las mismas con las herramientas necesarias para cumplir exitosamente con su tarea.
- 9- Dar especial atención a la lucha contra el narcotráfico, atacando cada una de las células y organizaciones delictivas, controlando límites provinciales y espacio aéreo con radares y personal calificado, dotando a su personal

del conocimiento, herramientas de trabajo, de protección junto con el manejo y aplicación de las nuevas tecnologías.

- 10- Crear a nivel nacional una base de datos de personas con pedido de captura, vinculada a cámaras de seguridad con identificación de rostro, y promover su réplica en todas las provincias del territorio argentino.
- 11- Crear una base de datos de vehículos con impedimento para circular vinculada a cámaras de seguridad con lector de dominios de vehículos (patentes) y promover su ampliación a las provincias

(patentes) y promover su ampliación a las provincias.

12-Reformular el sistema de seguridad interior.

13-Promover la coordinación y cooperación entre las fuerzas federales y provinciales de seguridad para desarticular redes de delitos complejos.

14-Invertir en tecnología para todas las fuerzas de seguridad.

COMUNICADO DE PRENSA

SIN LIBERTAD NO HAY ORDEN Y SIN ORDEN NO HAY PROGRESO

Ciudad de Buenos Aires, 14 de diciembre de 2023.- Presentamos el protocolo para garantizar el orden público frente a los cortes, piquetes y bloqueos que impiden a los argentinos vivir en paz.

Por instrucción del presidente de la nación y con la firme convicción de hacer cumplir la ley a rajatabla y de cuidar a quienes nos cuidan, resolvemos lo siguiente:

1. Que las 4 fuerzas federales intervendrán frente a cortes, piquetes o bloqueos, ya sean parciales o totales. La ley no se cumple a medias: se cumple o no se cumple.
2. Las fuerzas podrán intervenir sin orden judicial, como lo determina el artículo 194 del Código Penal para los delitos en flagrancia.
3. No se tomará en cuenta que hayan vías alternativas al tránsito o la circulación. Si se corta la vía principal, se libera la vía principal.
4. Se actuará hasta dejar totalmente liberado el espacio de circulación.
5. Para llevar a cabo estas medidas, las fuerzas emplearán la mínima fuerza necesaria y suficiente y será graduada en proporción a la resistencia.
6. Serán identificados los autores, cómplices e instigadores de este tipo de delito.
7. También se identificarán a los vehículos utilizados para registrar una infracción administrativa y/o penal.
8. Los datos de los autores, cómplices, partícipes, instigadores y organizadores serán remitidos a las autoridades de aplicación correspondientes.
9. También se dará aviso al juez competente en caso de daño ambiental. Por ejemplo: la quema de cubiertas.
10. En el caso de participación de niños y adolescentes se dará aviso a la autoridad competente de la protección de los mismos y se procederá a sancionar a aquellos que lleven niños a los piquetes.
11. Los costos vinculados a los operativos de seguridad serán cubiertos por las organizaciones o individuos responsables. En caso de tratarse de extranjeros con residencia provisoria, se mandará la información a la Dirección Nacional de Migraciones.
12. Se creará un registro de las organizaciones que participan en este tipo de hechos.

El que las hace, las paga.

Melody Accent

Add details, excitement & interest

Make your track more dynamic and exciting by adding accents on some important notes.

All you need to do is copy the notes that could emotionally impact the listener and play them with a new sound on top of the main melody.

The diagram consists of two horizontal panels. The top panel, labeled 'Accent' on the left, shows a grey rectangular area divided into two sections. Each section contains a few black horizontal lines of varying lengths, representing notes. The bottom panel, labeled 'Melody' on the left, shows an orange rectangular area divided into two sections. Each section contains a series of black horizontal lines of varying lengths, representing a full melody. The lines in the 'Melody' panel are more numerous and varied in length than those in the 'Accent' panel.

DAILY PRODUCER TIPS & TRICKS

1/2

MAKE YOUR DROPS MORE INTERESTING

1. REVERB AUTOMATION

Automate the reverb level of your leads, chords, synths... between empty sections of the drop.

THIS FILLS IN THE GAPS & GIVES A SMOOTH REVERB TRANSITION.

2. ADVANCED FILTERING

Instead of using the classic HP & LP filters, try to use different filters (like morph & harmonic filters).

THESE FILTERS CAN MAKE TRANSITIONS MORE UNIQUE & INTERESTING SOUNDING.

3. RENDER TO AUDIO

Consolidate/freeze your tracks into audio and chop them up, change the length of each chop.

THIS ADDS VARIATION IN RHYTHM OF YOUR SOUNDS.

4. ADD GLIDING NOTES

Use mono legato mode on your synths, leads... with a porta time between 60 - 250 ms.

THIS GIVES OVERLAPPING NOTES A GLIDING EFFECT.

5. PITCH AUTOMATION

Add a pitch automation to your samples, leads... on the start or towards the end of the note.

THIS ADDS EXTRA EAR CANDY TO YOUR SOUNDS.

6. VIBRATO AUTOMATION

Add a vibrato LFO to your leads, synths and automate the rate in the drop. Increase the vibrato on longer notes.

THIS MAKES YOUR SOUND MORE INTERESTING.

22 November 2023: “The Pentagon is moving toward letting AI weapons autonomously decide to kill humans

The US is among countries arguing against new laws to regulate AI-controlled killer drones. The US, China, and others are developing so-called “killer robots.”

Critics are concerned about the development of machines that can decide to take human lives.

The deployment of AI-controlled drones that can make autonomous decisions about whether to kill human targets is moving closer to reality, *The New York Times* reported.

Lethal autonomous weapons, that can select targets using AI, are being developed by countries including the US, China, and Israel.

The use of the so-called “killer robots” would mark a disturbing development, say critics, handing life and death battlefield decisions to machines with no human input.

Several governments are lobbying the UN for a binding resolution restricting the use of AI killer drones, but the US is among a group of nations — which also includes Russia, Australia,

and Israel — who are resisting any such move, favoring a non-binding resolution instead, *The Times* reported.

“This is really one of the most significant inflection points for humanity,” Alexander Kmentt, Austria’s chief negotiator on the issue, told *The Times*. “What’s the role of human beings in the use of force — it’s an absolutely fundamental security issue, a legal issue and an ethical issue.”

The Pentagon is working toward deploying swarms of thousands of AI-enabled drones, according to a notice published earlier this year.

In a speech in August, US Deputy Secretary of Defense, Kathleen Hicks, said technology like AI-controlled drone swarms would enable the US to offset China’s People’s Liberation Army’s (PLA) numerical advantage in weapons and people.

“We’ll counter the PLA’s mass with mass of our own, but ours will be harder to plan for, harder to hit, harder to beat,” she said, reported Reuters.

Frank Kendall, the Air Force secretary, told *The Times* that AI drones will need to have the capability to make lethal decisions while under human supervision.

“Individual decisions versus not doing individual decisions is the difference between winning and losing — and you’re not going to lose,” he said.

“I don’t think people we would be up against would do that, and it would give them a huge advantage if we put that limitation on ourselves.”

The New Scientist reported in October that AI-controlled drones have already been deployed on the battlefield by Ukraine in its fight against the Russian invasion, though it’s unclear if any have taken action resulting in human casualties.” —[Business Insider](#)

autism

“Two boys diagnosed with Autism Spectrum Disorder (ASD) endured mistreatment at a mental institution in Lebanon in 1982. While references to autism can be found in earlier psychological records, ASD was formally recognized by German scientist Hans Asperger during

World War II. Asperger Syndrome, the term previously used to diagnose individuals with ASD, is no longer employed in the United States since 2013, although it remains in use in the United Kingdom. Nonetheless, individuals who received an Asperger Syndrome diagnosis prior to 2013 may still identify with this label.

ASD manifests differently in each individual, encompassing challenges in social interaction, sensory sensitivities, maintaining eye contact, engaging in repetitive behaviors, developing intense interests (commonly known as “special interests”), and encountering difficulties in motor skills and communication, among other symptoms. It is crucial to recognize that no two people with autism are exactly alike.

Autism often coexists with other conditions, such as obsessive-compulsive disorder (OCD), attention deficit hyperactivity disorder (ADHD), dyspraxia, dyslexia, dyscalculia, depression, and generalized anxiety disorder. People with autism can exhibit exceptional intelligence, artistic or creative abilities, impressive memory, and heightened levels of empathy. Some theories suggest that autism emerged in humans approximately 100,000 years ago. Certain historians argue that autism has played a significant role in humanity's progress, as individuals with autism have exhibited exceptional traits throughout history, including their ability to exist outside of societal norms, excel in complex mathematics (contributing significantly to architecture), and demonstrate remarkable organizational skills.

It is essential to acknowledge that Hans Asperger, despite his contributions to understanding autism, should not be glorified, as he was complicit in sending numerous autistic children under his care to their deaths in gas chambers. Autistic individuals are extraordinary, resilient, and valuable members of our society.” —[Historic Vids](#)

average tax

Joe Biden claimed in a speech about the economy given to union members at the IBEW Local Union 26 in Lanham, Md., on 15 Feb. 2023, that the “average tax” for billionaires is “about 3%,” which is “a lower tax than a schoolteacher or a firefighter.”

Joe Biden repeats the campaign slogan “No billionaire should be paying a lower tax rate than a schoolteacher or a firefighter.”

Prior to 1983, Social Security was not taxable. In 1983, Joe Biden voted with 88 Democrat and Republican senators to tax up to 50% of Social Security benefits.

In 1993, Joe Biden voted for Bill Clinton’s increase of up to 85% of Social Security benefits. The vote ended in a tie of 50 Democrats and 50 Republicans, with Vice President Al Gore casting the deciding vote.

During the first two years of Joe Biden’s presidency, when Democrats had control of both houses of Congress, Biden led the fight to prevent any rise in the minimum wage, but in just five days he got Congress to outlaw the right for RR workers to strike or even have sick days (signed into law 22 December 2022).

bail bonds

4 September 2023: “THREAD. Behind closed doors, a little-known bureaucrat in Los Angeles just signed one of the weirdest—and most dangerous—contracts I’ve seen in my career: it gives huge control over the “justice” system in Los Angeles to the consulting firm Accenture.

After years of hard work by community members, they won an inspiring political victory: they got the largest county in the U.S.—with the biggest, most profitable jail system—to transition to a safer system that prioritizes evidence and care instead of profit and incarceration.

Part of the background: last year, a court finally declared LA’s cash bail system unconstitutional: although it makes billions for the for-profit bail industry, it is unconstitutional to jail people solely because their families cannot pay a cash premium to a private company.

You can read more about that background here, because it’s essential for seeing how corporate profit-seekers are now trying to morph the cash bail system into one of profiting from supervision, surveillance, and electronic monitoring: [judicial ruling](#)

The community has been working against this for years: impacted people, professors, faith leaders, public health experts, philanthropists, organizers, lawyers got to planning, setting up commissions, doing research, making meticulous recommendations, and starting pilot programs.

The wide range of community experts did such a good job that they even got the County government to sign off on their work and adopt it as the County’s plan: [LA County plan](#)

The goal: instead of separating 10,000s of families and putting them in a jail where a lot of people die and contract infectious diseases solely b/c their families don’t have \$, people could be released prior to trial with their families getting treatment and resources they need.

But LA hired a relatively unknown former judge (with controversial reputation among people who know her) to run a crucial department (Justice, Care, and Opportunities Dep’t) tasked with implementing this community vision of care instead of cages. What happened next is baffling.

Accenture, one of the world’s largest consulting corporations, somehow secured from JCOD a multi-million dollar contract to erase and redo the community’s work to plan the County’s pretrial system.

The company started billing the county tens of thousands of dollars for consultant PowerPoint presentations and hundreds of dollars per hour for junior consultants:

Accenture has a long history of working with police and ICE to do exactly the opposite of what LA County voters, officials, and community experts decided they wanted: expand surveillance and incarceration.

Incredibly, the people assigned to milk money from LA County for this contract are like a who’s who of experts in surveillance and police profiteering.

A lot of people in the County government apparently didn’t even know that Accenture was doing this with public money. Everyone I’ve spoken to—from lawyers who work with the county to officials across Los Angeles to community leaders—are in disbelief.

It’s pretty rare to see the profit motive behind the punishment bureaucracy this out in the open, and this flagrantly in violation of the wishes of the community.

The company is positioning itself to convert LA’s pretrial system into one of police surveillance, highly-profitable electronic monitoring, huge windfalls for carceral unions, and more.

Luckily, the community found out about the contract before it's too late. While \$500,000 is already down the drain on PowerPoints and Kick-Off Meetings, LA can still save millions and return to the community plan that local experts already developed.

When we talk about getting involved in something local and making a difference, this is it. We can stop stuff like this. We can end the outsourcing of expertise and profiteering from the incarceration system. You can learn more and get involved here: [Expose Accenture](#) — [Alec Karakatsanis](#)

bass drum

Also called kick drum.

11 December 2023: “Kick mixing tip

If you hear that kick starts to drown at some point in the mix, or it sounds different and dull in the mix comparing to kick in solo

It is a sign of the conflict. Something is not allowing kick to cut through.

Try to turn off different elements to understand when this problem disappears

When you identify which sound doesn't allow kick to cut through, try to fix it, using either:

- Equalization (cut those frequencies that are important for kick, from the other instrument)
- Multiband compression, similar but in dynamic mode, sidechained from kick
- Spectral compression, same as mb compression but more precise (soothe2). Sidechain from

kick as well.” —[Nathaniel W.](#)

27 December 2023: “Frequent mixing mistake

This mixing mistake ruins both mixes and then masters.

Here is the thing. You may like your kick in solo but in the mix it becomes much less

noticeable and you don't get enough punch out of it.

What people start to do?

They start increasing the kick level, or reach out to transient shaper, or compressor, trying to get more punch out of it.

But they totally forget that the punch in solo is there. And if it's there, it's there.

You lose it in the mix not because of the kick, but because of other instruments. Kick can conflict with pretty much any instrument or even vocals.

Carve out more space for it. Sidechain more sounds from kick, let it breath.

It is a low frequency sound which already needs more loudness to perceive well enough since we hear low frequencies much worse.

When you try to increase the kick level trying to overpower everything, you make it much louder than other sounds. To the point where balance is destroyed.

And while it may sound good in the moment, your limiter will react to this kick very heavily during mastering, that will lead to pumping and hard limitations in terms of how much loudness you will get out of your mix.

It also will reduce the translation of the mix, it can get totally destroyed on other systems.

Conclusion: make sure your kick sounds the same in solo and in the mix. And if it's not, fix it by carving out the space for it.

Check your mixes. I'm almost sure you will hear this problem if you didn't pay specific attention to it.

Follow me for more daily mixing tips @natemixing" — [Nathantiel W.](#)

30 December 2023: "My tips for good bass

1. Sidechain from kick with multiband compressor, whole band below 100-150hz

2. Possibly you can use a second sidechain from kick, broadband compressor, a few db

All sidechain compressors are at fastest settings

3. Tape saturation if needed warmth and richness. Blackbox HG2 or Vertigo VSM-3 to add more aggressive richness.

4. Heavier distortion if needed to cut through (Fabfilter Saturn, Decapitator)

5. soothe2 to remove low resonances (I do it very often because most bass tracks I get are muddy)

6. Cut with EQ 150-200 hz to remove low mid muddiness

7. Adjust sub frequencies by reference and spectrum analyzer if you don't have a full range system

8. dbx160 is a great compressor for bass. 1176 and Distressor recommended also.

9. Sidechain melody and vocals from bass using soothe2 or multiband compressor

10. Find yourself one bass enhancing plugin, highly recommend Low End Focus from iZotope Ozone. Works like charm

11. Make sure you have energy in every bass range: sub bass (if production considers), low bass, mid bass, high bass. Or you will lose translation.

12. If higher frequencies of bass are not audible in the mix, cut them.

13. Cut side information from bass on the master channel if production doesn't consider stereo bass.

14. Pay special attention how your bass sound when you solo Side signal. Muddiness and

rumble there will do twice as more harm.

15. Make sure nothing becomes quieter when you turn on bass. Making sure it doesn't mask anything.

Bonus tip: never use any reverb, unless it's a very well considered special FX at some moments" —[Nathaniel W.](#)

17 January 2024: "Get more body for your kick

Sometimes your kick may have a punch but it's too thin. How to make this kick sound more "fat" and "heavy"?

A great decision would be to use tape emulation device. Analog tapes tend to smoothly round off the transients, leaving the body of your sounds.

You can use this trick to smooth out your other sharp sounds as well.

I use UAD Studer A800 for that." —[Nathaniel W.](#)

part of speech: verb

Oxford English Corpus (OEC) rank: #2

Corpus of Contemporary American English (COCA): #2

Dolch level: Primer

Polysemy: 21

“Be” is a verb in the English language that serves as an auxiliary verb and a main verb. It is a highly versatile verb that is used to indicate various states, qualities, conditions, or existence. As an auxiliary verb, “be” is used in the construction of continuous tenses (e.g., “I am running”) and passive voice (e.g., “The book was written”). It helps to convey ongoing actions, temporary situations, or actions performed on the subject.

[ChatGPT]

As a main verb, “be” functions as a linking verb that connects the subject of a sentence to its complement, describing or identifying the subject. For example, in the sentence “He is a doctor,” “is” links the subject “he” to the complement “doctor,” indicating his profession or identity. “Be” can also express a state of being, such as “I am happy” or “She is tired.” Furthermore, “be” is used in imperatives (e.g., “Be quiet!”) and in conditional sentences (e.g., “If I were you...”).

[ChatGPT]

The forms of “be” include “am,” “is,” “are,” “was,” “were,” “been,” and “being,” depending on the tense, person, and number of the subject. It is an essential and frequently used verb in English grammar.

beatmakers

27 December 2023: “Beatmakers can be sued over drum patterns?”

This isn’t about sampling— if you sample a sound recording, that requires clearance. But copyright law has never covered drum patterns/rhythms.

To be clear, this lawsuit would change the law so that producers/artists who use a drum pattern that another producer/musician claims they invented would be guilty of copyright infringement. This strikes me as a slippery slope as boom bap, trap, EDM, RnB, Disco, Blues, DnB, Afrobeat, Bachata, Salsa, etc all have similar rhythmic foundations.

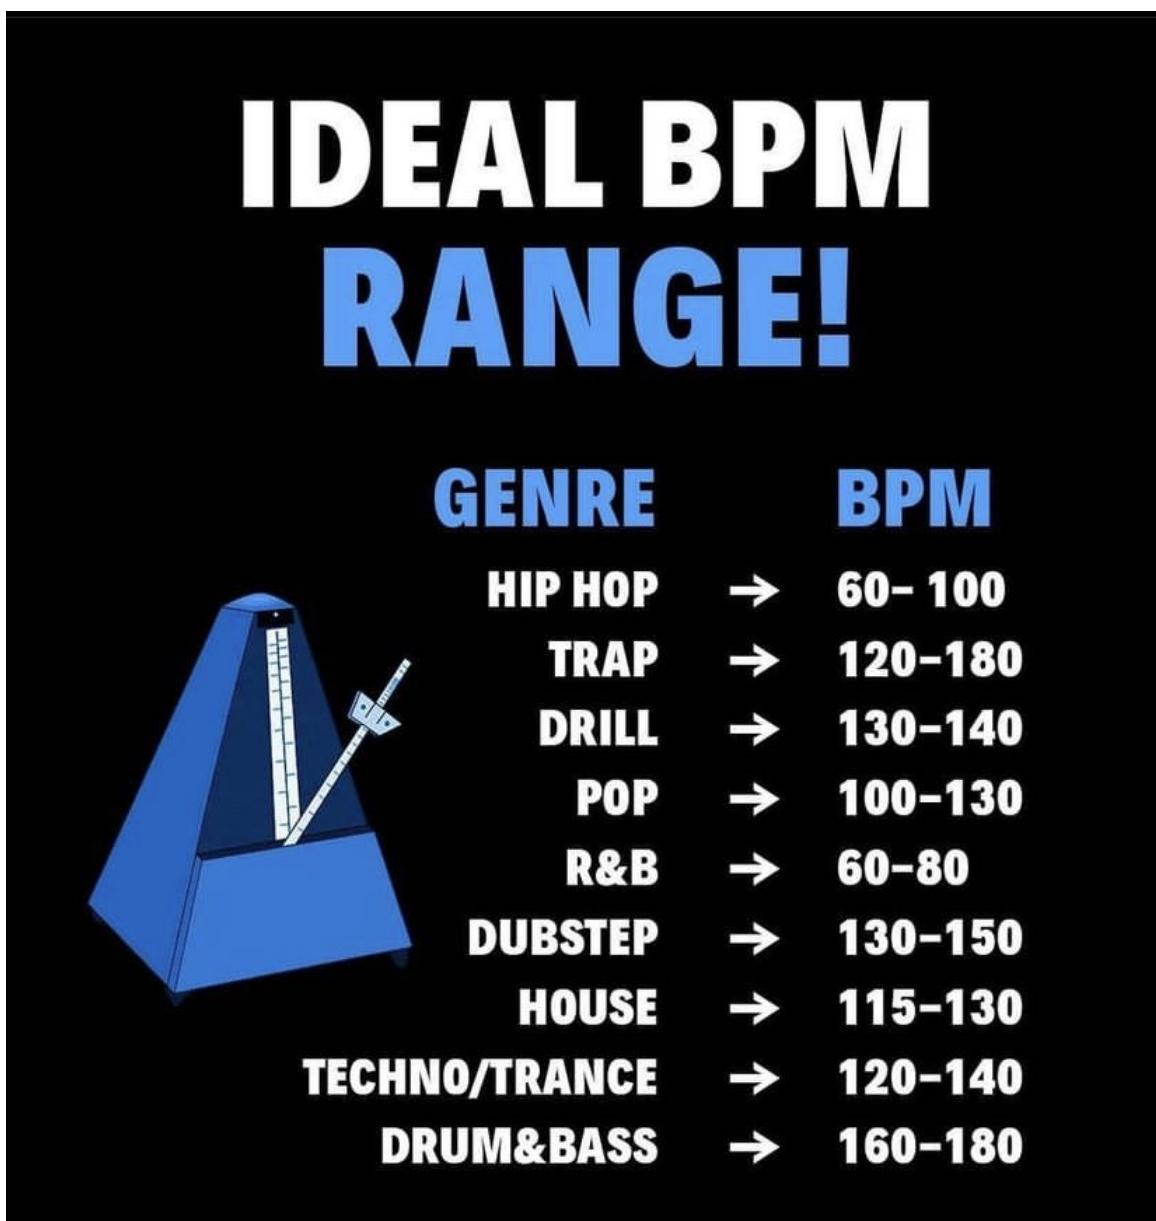

What is more, the producers suing virtually the entire reggaeton genre are claiming ownership

of a drum pattern that I have heard before their ‘fish market riddim’ dropped, for example in Womack and Womack’s ‘Baby I’m Scared of You,’ not to mention tracks like ‘pounder riddim’ that sound much more like the modern Reggaeton drum pattern and sound.

What do you think? Should producers and the music industry in general be concerned?” —[DJ Pain 1](#); includes video

beer

an alcoholic drink made from yeast-fermented malt flavored with hops

Beer is an [alcoholic beverage](#).

origin:

Origin: There is debate as to where the first beer was brewed, but Sumeria and ancient Egypt (Kemet) were certainly among the first civilizations to brew beer. Half of all the grain grown in Sumeria was used for beer and the ancient Egyptians referred to the beverage as “joy-beer”.

history:

History: Leavened bread from ancient Egypt around 4000 B.C.E. Herodotus called the Egyptians “the bread eaters”. [Onions](#), [bread](#), and beer were the basics of Egyptian the diet. Onions were extremely popular and used extensively in cooking. Beer was extremely popular among the ancient Egyptians.

Egypt: [Barley](#) was popular in ancient Egypt, where it was used to make bread and to make barley beer sweetened with honey. Barley beer is likely to have been the first alcoholic beverage humans made.

History: The Little Ice Age (from the 14th to mid-19th centuries) is the reason that Americans today now drink eleven (11) times as much beer as wine. The lower temperature hurt wine production (grapes required warmer climate) and encouraged the production of beer.

History: Prior to the American Revolution, George Washington made beer with [molasses](#).

Day Beer Flowed: At 12:01 a.m. April 7, 1933, beer was legally available in the U.S. again. Incoming President Franklin Roosevelt convinced Congress to pass a Constitutional Amendment repealing the infamous 18th Amendment (Prohibition, which outlawed alcohol except for religious use by the Roman Catholic Church). It took eight months for the 23rd Amendment (revoking Prohibition) to be ratified by enough states. Roosevelt convinced Congress to modify the Volstead Act on March 13, 1933, changing the definition of “alcoholic” and “intoxicating” beverages from more than 0.5% to more than 3.2%, thereby making beer legal. Throughout the United States, sirens, fire alarms, and train whistles greeted the legalization of beer.

Approximately 800 persons stood outside the White House while two cases of beer were turned over to the Secret Service for delivery to President Roosevelt.

nutritional information:

Alcohol is harmful to the [liver](#) and therefore should be reduced or eliminated from your diet.

Beer is abundant with silicon (a trace mineral and an element) that helps prevent the body from absorbing aluminum. Aluminum is a neurotoxin and plays a role in the development of Alzheimer's disease. Do not drink more than one beer a day, as drinking more is related to increased risk of breast cancer. The silicon in beer can also help prevent osteoporosis by strengthening bones (similar to the role of calcium) and preventing loss of calcium in bones.

ritual uses:

Ritual uses: Lammas celebrations include offerings of bread and beer.

January 6: Twelfth Night: European holy day. Day to clean up the debris from the Yule Feast.

Wassailing: Pre-Christian Germanic tradition was to wassail, which comes from the Anglo-Saxon phrase *waes hael*, which meant “to be whole” or “to be healthy”. The Anglo-Saxons would toast each other's health and share drink from a large wooden bowl. The wassail drink was called “lamb's wool”. The traditional mixture was made by adding spices to hot [ale](#), beer, or mead. In more recent times it has been made from hot apple cider. The traditional spices included: nutmeg, ginger, and cinnamon (especially nutmeg), sweetened with sugar, honey, or sugar-coated crab apples (especially honey). The mixture was served hot and often topped with toasted bread.

May 5: Cinco de Mayo: Mexican holiday. The fifth of May. Celebrates the Battle of Puebla, May 5, 1862, in which the Mexican army under General Ignacio Zaragoza Seguín defeated a much larger attacking French army at the city of Puebla. This day is primarily celebrated as a historical event in the Mexican state of Puebla and also celebrated as a beer drinking holiday in the United States.

November 28: Feast of Het Heret and Sekhmet: Kemetic (ancient Egyptian) holy day. Feast of [Het Heret](#) [Hathor] and [Sekhmet](#). Honors [Het Heret](#) [Hathor] as [Sekhmet](#), Lioness, Sun Goddess, and Beer Goddess, getting drunk on red beer and returning to a gentle form.

December 31: Feast Day of Sekhmet: Kemetic (ancient Egyptian) holy day. Feast Day of [Sekhmet](#). This feast day typically includes the drinking of red beer. [Sekhmet](#) is Goddess of Endings, but in the ancient calendars this feast was celebrated in the middle of the month of Mekhir. Did the ancient priestesses know that this would be the end of the year in our modern calendar?

wedding reading

Wedding reading from ancient Egypt:

“Let My Love Love Me Best”,

from the Turin Papyrus, in the Ramesside period circa 1100 BCE, Egypt.

Let my love love me best and I shall ordain
 Her hands full of lotus blossoms and flowers
 Full of buds and perfumes, strong ale
 And beer of every brewable kind
 Then she'll give me, her love, a day to remember
 Make me drink down this day to its last shadow

The **REALITY** is that Biden is complicit in a genocide, aiding and abetting collective punishment on a gruesome scale.

Worse than anything Trump did.

I slammed Trump for his heinous policies, whether in Yemen, his Covid failures, or his crimes against humanity at the border.

But Biden has done worse: Continued arming the Yemen slaughter, caged migrants, presided over far more Covid deaths, and enabled the massacre in #Gaza.

And please spare me the “Biden is saving democracy” propaganda. If you still believe that after everything we’ve seen from this administration, I have a bridge to sell you.

4 December 2023: “The Horrors In Gaza Are Happening Because The US Empire Wants Them To Happen

I came across an interesting quote made last month by a retired Israeli major general named Yitzhak Brick about the ongoing IDF assault on Gaza.

“All of our missiles, the ammunition, the precision-guided bombs, all the airplanes and bombs, it’s all from the U.S.,” Brick said. “The minute they turn off the tap, you can’t keep fighting. You have no capability. ... Everyone understands that we can’t fight this war without the United States. Period.”

Brick made these observations not as an anti-imperialist critique of the US war machine, but as part of a diatribe about how ridiculous it is for Israel to be asked by Washington to allow humanitarian aid into Gaza and to try to avoid civilian casualties. He apparently believes Israel should be killing far more Palestinians in Gaza, not fewer.

Brick — whose warnings of an impending Hamas attack were dismissed and ignored by Israeli government and military officials in the lead-up to the events of October 7 — makes an important point nonetheless. The support of the US war machine is absolutely 100 percent essential for Israel's continued murderous onslaught in Gaza, which just killed some 700 people in a single 24-hour period. This necessarily means that these ongoing acts of human butchery are occurring because the US permits them to.

Brick's comments fly in the face of narratives fed to the press by the Biden administration saying that the White House is frustrated by Israel's complete disregard for human life in Gaza but finds itself powerless to influence its ally's actions in a more humanitarian direction.

In an article published last month titled "White House frustrated by Israel's onslaught but sees few options," *The Washington Post* reports that according to unnamed US officials the Biden administration believes that "Israel's counterattack against Hamas has been too severe, too costly in civilian casualties, and lacking a coherent endgame, but they are unable to exert significant influence on America's closest ally in the Middle East to change its course."

This is of course a load of bullshit. The Biden administration could end all this with one phone call, in the same way it commanded Israel to restore Gaza's communications in October after the IDF cut the enclave off from the world, and in the same way Israel's 1982 assault on Lebanon was halted with a phone call from President Reagan.

The ongoing massacre in Gaza is happening because the US empire wants it to happen. They could stop the bloodshed at any time, but they don't, because they do not want to. This is because the US empire is run by sociopaths who only care about global domination, and nonstop violence from Israel is a key component in the domination of a crucial geostrategic region on this planet.

Don't let the monsters in Washington DC and Virginia wash their hands of this horrific atrocity. They know exactly what they're doing. They're every bit as responsible for Israel's crimes against humanity as Israel itself. They posture and pay lip service to the protection of civilian lives, but they do so exclusively for their own PR interests. These freaks would happily send every Palestinian alive to the gas chambers if they thought it would advance their strategic interests one iota." —[Caitlin Johnstone](#)

6 December 2023: "Breaking: Biden raises the possibility of World War 3 with "American troops fighting Russian troops". To be clear a war between two nuclear powers is guaranteed to end with nuclear war. Didn't the Democrats insist that Trump would start World War 3?" —[Kim Dotcom](#)

Bidenomics

Joe Biden keeps using the phrase “grow the economy from the middle out and bottom up” Think for a moment. What does that word salad mean? There is no clear obvious meaning to that grouping of words. You can imagine what you guess it might mean. And other people can imagine what they guess it might mean. But there is no obvious shared meaning. The phrase is designed for people to nod along and wrongly assume that Biden means whatever the listener guesses. This is a psychological operation (psy op) technique invented by Edward Bernays and famously honed by Joseph Goebbels, Nazi Reich Minister of Public Enlightenment and Propaganda.

Big Ben

31 December 2023: “The Houses of Parliament building in Westminster, London, UK, is home to the famous clock tower that houses “Big Ben.” The nickname Big Ben is today often applied to the tower, the clock, and the bell, but originally it applied solely to the largest bell inside the tower. The bell was named for Sir Benjamin Hall, who oversaw the latter stages of the rebuilding of the Houses of Parliament after the 1834 fire. The chimes of four other bells in the tower combine to play the Westminster Quarters tune. On New Year’s Eve 1923, BBC Radio first broadcast Big Ben’s chimes to the UK, and in 1932 the chimes were broadcast internationally as part of King George V’s Christmas address. The structure was renamed the Elizabeth Tower in 2012 to honor the late Queen Elizabeth II’s Diamond Jubilee. The clock itself is the world’s largest four-faced chiming clock.” —CIA World Factbook (material that expires after 30 days)

Big Lie

“If you tell a lie big enough and keep repeating it, people will eventually come to believe it. The lie can be maintained only for such time as the State can shield the people from the political, economic and/or military consequences of the lie. It thus becomes vitally important for the State to use all of its powers to repress dissent, for the truth is the mortal enemy of the lie, and thus by extension, the truth is the greatest enemy of the State.” —Joseph Goebbels

The things you claim are now "pandering to the lefties" were never on your side, to begin with.

·If you consider yourself a fan of these things, but you still think the LGBTQ+ community is too "in your face", or have a problem with Black Lives Matter, or want to "take the country back from immigrants", then you're not really a fan at all.

Black Pyramid

“A rare intact pyramid capstone; it is one of the few known in existence. The capstone belonged to the Black Pyramid, which was built by King Amenemhat III, c 1850-1800 BC.

The hand carving shows a solar disc with two cobras and outstretched wings (sign of protection) on each side. Below are two eyes (which refers to “seeing”) and below that is the hieroglyph for “beauty” and finally below that is the hieroglyph for the “sun disc of Ra” (the ancient Egyptian deity of the sun). Put that all together and it reads: “Seeing the beauty of Ra”.

Now we move to the left, which reads: “The Son of Ra, Amenemhat (in cartouche), given life forever.”

Now go back to the center and read right: “King of Upper and Lower Egypt, Nimaatre (in cartouche), given life forever.”

The second line reads from right to left: “May the face of the king of Upper and Lower Egypt, Nimaatre, be opened so that he may see the Lord of the Horizon (Horakhty, Horus of the Horizon) when he crosses the sky; may the Lord of the Horizon cause the Son of Ra, Amenemhat, to shine as a god, lord of eternity and indestructible.”

“The first known blueprint can be traced back to the ancient civilization of the Sumerians, who made significant advancements in architecture and urban planning.

Around 5,000 years ago, they developed a house plan featuring a central courtyard, which is considered as one of the earliest blueprints in human history. The ground plan of a residence in Umma, a Sumerian city, showcases this design and provides insight into their architectural techniques.

This blueprint served multiple purposes. It provided an open area for gathering, socializing, and conducting various household activities. Additionally, it allowed for better ventilation and natural lighting within the living spaces. The courtyard design also offered a sense of privacy, as

21 August 2023: “The BRICS summit begins tomorrow, which will determine the fate of the dollar in the future

Tomorrow in South Africa the long-announced summit of BRICS will be attended by all its permanent members Brazil, Russia, India, China and South Africa, as well as 40 other countries, including a large number that are waiting to be admitted to this organization .

It has long been announced by politicians of these countries that BRICS is working on its own currency for international trade that will destroy the dominance of the dollar as a world reserve currency.

The US is using this situation of the dollar as the world's reserve currency, as a weapon against disobedient countries and has imposed sanctions on them, preventing those countries from using the dollar in world trade and thus plunging them into economic crisis and misery.

This condition of the dollar also allowed the United States to print large amounts of unbacked dollars and release them into international use. This means that the world works for the US while it only prints dollars for them.

Current world dollar reserves are 58% and continuing to fall as US foreign debt continues to rise.

If BRICS comes out with a new currency like this, this will be a huge blow to the dollar and the US economy. The US will no longer be able to afford the luxury of printing without cover, and the external debt will continue to grow.

If this plan fails due to India's insecurity, the Chinese Yuan is well on its way to taking over that role.

The *Financial Times* reports that China plans to turn the BRICS into a geopolitical rival to the G7.

This article is completely wrong.

BRICS countries have already surpassed the G7 and together contribute nearly 31.5% of the global GDP, compared to 30.7% by G7 countries. And these are only the founding BRICS countries, without those that have applied and are waiting for their acceptance into the organization, such as Iran, Saudi Arabia, Indonesia, Venezuela, etc., a total of 15.

Another thing is that it is not China that controls BRICS, but all members are equal, unlike the G7, which all members obey the United States.

If Saudi Arabia is admitted, keep in mind that the petro-dollar is ending which will be the most painful blow to the dollar.

With all these countries, BRICS will manage the majority of the world's resources, including oil, gas, lithium, gallium and many other very important materials needed for advanced

technology.

BRICS was not that active and did not have any bright future before the war in Ukraine. Biden and his administration can claim another success in destroying American hegemony in the world.” —[Megatron](#)

24 August 2023: “New composition of BRICS will control 80% of world oil production

With the addition of Saudi Arabia, the United Arab Emirates and Iran to the BRICS, the Union will be able to control the lion’s share of the world’s oil production.

The same goes for the sharp GDP growth of the new BRICS countries. It will amount to 30% of world GDP and exceed \$30 trillion.” —[Sprnter](#)

24 August 2023: BRICS admitted Saudi Arabia, Iran, Ethiopia, Egypt, Argentina, and the United Arab Emirates.

25 August 2023: “BREAKING: Barely 24 hours from the just concluded 15th Annual BRICS Summit, Brazil has proposed the Chinese Yuan as Trade Guarantee to Argentina as the dollar’s influence declines drastically in that country. So, in order to reduce the trade risks associated with the dollar, all exports headed towards Argentina from Brazil will be conducted with the

Chinese Yuan amidst Argentina's acute dollar shortage.

At the same time, Vladimir Putin has also just announced BRICS games 2024 and invited all BRICS member states to the epochal event that'll be the first since admitting six more countries into the bloc. Extending invitation, Putin said "Russia will be happy to welcome BRICS athletes during the 2024 Games of the Future, which will feature hybrid disciplines in both traditional sports and popular video games." The sporting event is slated for June 12-24, 2024.

In the west's sanction war on RUSSIA since the start of the RUSSIA-Ukraine war, Russian sportsmen and women haven't been spared. They have been publicly humiliated and altogether banned from nearly all global sporting events whilst whilst seizing the opportunity of such events to celebrate/glorify Ukraine and promote their course in that country. With the new face BRICS vis BRICS + Six and a dozen plus other countries on the wait list, Russian sports personnel may no longer be needing western sports establishment, from the look of things. What happens in 2024 at the BRICS games in Kazan will set the tone for where the future of sports in our world lies - in the hands of those who would deploy sports as a weapon of choice against their opponents or those who will separate politics from sports, obey the rule of law and respect peoples right to personal opinions.

As the BRICS summit got underway, the legacy media and their talking heads could swear that BRICS was not ever gonna be able to admit any new member, because according to them, BRICS was too weak, too divided to forge any more alliance past where they were before the summit. When the big announcement came, the shock on their faces was legendary. With all the pessimistic vibes they tried to give out, it now appears the BRICS nation are even running faster than many had anticipated. Just that they managed to find a crazy way to keep it all quiet and just show up with actions - something I believe the west and their media goons are still scratching their heads to comprehend.

Welcome again, to the multipolar world!" —[J.C. Okechukwu](#)

Buckingham Palace

6 January 2024: “Buckingham Palace is the official residence and administrative headquarters of the monarch of the United Kingdom. The original building, the center of the palace, was a large townhouse known as Buckingham House, built for the first Duke of Buckingham in 1703. It became a royal possession when King George III purchased the house in 1761 as a private residence for Queen Charlotte. In the 19th century, the structure was enlarged to become a palace. Queen Victoria was the first sovereign to make the palace her residence in July 1837 and, in June 1838, she was the first British monarch to leave from Buckingham Palace for a coronation. Over the years, Buckingham Palace expanded further to its current 775 rooms that include 19 state rooms, 52 royal and guest bedrooms, 188 staff bedrooms, 92 offices, and 78 bathrooms. USS Canberra

26 July 2023: “A new US warship has been ushered into service in Sydney. The ship is called the USS Canberra to honor the military union of the United States and Australia, and, if that’s still too subtle for you, it has a literal star-spangled kangaroo affixed to its side.

That's right: the first US warship ever commissioned in a foreign port has been emblazoned with a kangaroo covered in the stars and stripes of the United States flag. An Australian officer will reportedly always be part of the staff of the ship, to further symbolize the holy matrimony between Australia and the US war machine.

"I can think of no better symbol of this shared future than the USS Canberra," gushed US ambassador to Australia Caroline Kennedy. "Built by American workers at an Australian company in Mobile, Alabama, her crew will always include a Royal Australian Navy sailor, and from today forward, she will proudly display a star-spangled kangaroo."

And you know what? She's right. Not because of her giddy joy over the complete absorption of Australia into the US military apparatus of course — that's a horrifying nightmare which is increasingly putting this nation on track toward a frontline role in Washington's war plans against China. But she's right that the star-spangled kangaroo and the ship which carries it is a perfect symbol for the way these two nations have become inseparably intertwined.

In fact, I'd take it a step further. I'd say the star-spangled kangaroo should be the new symbol for our entire nation.

I mean, we might as well, right? Australia is not a sovereign nation in any meaningful way; we're functionally a US military/intelligence asset, and according to our defence minister Richard Marles our own military is being moved "beyond interoperability to interchangeability" with the US war machine so they can "operate seamlessly together, at speed."

The US imprisons Australian journalist Julian Assange for exposing US war crimes like he's

the personal property of the Pentagon, and when the US doesn't like our Prime Minister because he's too keen on Australian independence or perceived as too friendly with China, they simply replace him with another one.

We even found out not long ago that Australians are not given permission to know if the US is bringing nuclear weapons into this country. That is a secret the US keeps from all of us, and our government respects their privacy on the matter.

So I think the star-spangled kangaroo is an entirely appropriate symbol for this country. Put it on our flag. Put it on our money. Put it on all our warships and planes, and on every military uniform. When you walk into an Australian government building, Yankarooey (or whatever stupid Aussie nickname we make up for the thing to mask our own cognitive dissonance) should be the first thing everyone sees.

Undignified? Certainly. Humiliating? Absolutely. An admission that Australia is not a real nation? Of course.

But at least it would be honest. If we're going to act like Washington's subservient basement gimp, we may as well dress the part." —[Caitlin Johnstone](#)

Cape Verde

13 August 2023: "BREAKING: ECOWAS member state, Cape Verde opposes military intervention in Niger.

According to the country's president, Jose Maria Neves, "We all should work to restore constitutional order in Niger but in no way through a military intervention or an armed conflict at this point. We should actively engage in talks and resolve issues diplomatically because any military intervention will make the situation worse, turning the region into an explosive zone," Agence France-Presse quoted him as saying.

Meanwhile, a meeting of defence chiefs of ECOWAS member nations scheduled to hold in Accra, Ghana, yesterday, Saturday, August 12, to concretize the planned troops deployment for military intervention in Niger Republic, was unexpectedly called off. Reason being that member nations are divided on the need for such an intervention at this time.

Cape Verde joins the ranks of Sierra Leone, Ghana, Liberia and Togo who earlier on declined to take position on the proposed military intervention in Niger. This explains why the proposed Accra, Ghana meeting of ECOWAS military chiefs eventually failed to hold.

Not sure if it's a coincidence, but all these institutional resistance to military intervention became more evident and grew louder shortly after RUSSIA openly warned against military intervention in Niger. Beyond that, Africans have been up in arms against the rushed decision and the campaign against it has been robust and simply overwhelming, both online and on-site.

Interestingly, some 94 French lawmakers have blasted President Emmanuel Macron in an open letter following the Niger coup. They warned that France was at the risk of being squeezed out of Africa by global powers like Russia, China, etc. They urged Macron to rethink France's Africa policy as it had failed to win over cooperation from the Africans.

Bottomline, the voice of the people of AFRICA is being heard loud and clear, more than at any other time in history. Enough is enough! The time for Africa's freedom is now and it's not negotiable. Never ever give up on mama. Viva AFRICA!" —[J.C. Okechukwu](#)

13 August 2023: "The question I am asked so often: Ayisha how can we solve the climate crisis, what is the best solution?

The answer I want to say in the most blunt way possible: end capitalism. Transition away from market based exploitive economies. It's not working.

It devours everything, from protest to rebellion, from ecological and nature based solutions to the health of living beings. It's the biggest lie we are being sold that we can transition into a sustainable world under capitalist driven systems.

Even renewable energies under capitalism are harmful. We can probably in the short term change more easily from fossil energy to renewable- but in the end we will sacrifice more human life.

People often throw around the phrase “Indigenous/ local communities are at the frontlines of the climate crisis” and leave out indigenous people suffer perhaps the most direct consequences of capitalism. We know what it means to be forced into poverty after being rich in resources

It's also why, I'd argue awareness of food systems, biodiversity, resources being exploited is so darn scary for corporate powers. It's not the renewable transition they fear, it's the peoples realization that these things belong to us, for free, that we deserve them—as basic human rights. George Washington Carver

“George Washington Carver had a difficult start in life. Born sometime around 1864, his father died shortly before George’s birth, likely from an accident when he was out hauling wood. And only weeks after birth, slave traders kidnapped George and his mother. Rescued would not be an apt term; recovered is more appropriate. But the group sent out to find him and his mother exchanged a horse for the young boy. His mother, however, was lost to the traders. Less than two months old, and George was already an orphan.

Often sick, frail, he was not expected to live. But live he did, and from a young age, he showed much devotion to work and a desire for learning. He was curious, and as he’d roam the woods near the Carver home, exploring flowers, trees, rocks, and birds, he began asking questions about their purpose.

While much of his education early on was self-motivated, he began formal schooling at ten. He learned of a school about eight miles from the Carver home. And without any money or a new home, he left the Carver’s to attend this school, living in an old barn while doing odd jobs to

earn money to survive. Eventually, he was adopted into a family there.

Education for George would continue through completing a Master's Degree in agriculture from Iowa State University in 1896. After which, he took a job as Head of the Agricultural Department at the Tuskegee Institute in Alabama.

George was also an artist. At the age of 30, Carver gained acceptance to Simpson College in Indianola, Iowa, where he was the first Black student. Carver studied piano and art.

As an agricultural scientist and inventor, his goal was to help farmers improve their lives by earning more from their crops. He found hundreds of uses through his research of peanuts in particular and other products such as sweet potatoes and pecans. His work was instrumental and impactful. Between 1915 and 1918, acreage for peanut cultivation grew from half a million to over four million acres.

After George passed away in 1943, Franklin D. Roosevelt sent a message that said: “ All mankind are the beneficiaries of his discoveries in the field of agricultural chemistry. The things which he achieved in the face of early handicaps will for all time afford an inspiring example to youth everywhere.” ” —[African & Black History](#)

The cat is digitigrade. It walks on the toes, with the bones of the feet making up the lower part of the visible leg. Unlike most mammals, it uses a “pacing” gait and moves both legs on one side of the body before the legs on the other side. It registers directly by placing each hind paw close to the track of the corresponding fore paw, minimizing noise and visible tracks. This also provides sure footing for hind paws when navigating rough terrain. As it speeds up from walking to trotting, its gait changes to a “diagonal” gait: The diagonally opposite hind and fore legs move simultaneously.—[Wikipedi](#)

Birds, reptiles, and mammals constitute ~90% of species consumed, with insects and amphibians being less frequent. Approximately 9% of known birds, 6% of known mammals, and 4% of known reptile species are identified in cat diets. 97% of species consumed are <5?kg in adult body mass, though much larger species are also eaten. The species accumulation curves are not asymptotic, indicating that our estimates are conservative. CFA

14 August 2023: “CFA Franc explained:

To control a country's money is to control its destiny. Without monetary sovereignty, there is no way to have economic sovereignty. Without economic sovereignty, there is no way to have political sovereignty. And that is precisely what France set out to do via the CFA Franc.

CFA Franc was first introduced by Charles De Gaulle, and is currently used by 14 nations in North Africa (Roughly 200 Million people). Originally, ‘CFA’ stood for “Colonial French Africa”, but as the image of colonialism became increasingly frowned upon, the acronym was later changed to “Financial Community of Africa”. Nonetheless, changing the acronym did nothing to change the underlying mechanics of how the the CFA Franc functioned.

The CFA Franc is tied to France's currency, at a fixed rate. This means that when the CFA Franc fluctuates in value at the exact same rate that the Euro does. French central bank retains the right to print, circulate and regulate all CFA Franc bills. CFA Franc nations don't even get to control their own interest rates. They are completely set by France. So in periods of economic turmoil, African nations are virtually powerless to set any monetary reforms needed for recovery.

At face value, this might initially seem to have its benefits, because being tied to a stable currency, such as the Euro, offers a degree of financial security and inflation protection. However, in practice, it makes export dependent growth extremely difficult. In order for a country to break out of poverty, it needs export-driven growth and its own monetary independence.

The CFA Franc is fixed to the Euro, which results in domestic goods becoming less price competitive whenever the Euro appreciates against other currencies, especially the US dollar, the global reserve currency. This has resulted in domestic industries never having taken off within these African countries. As a consequence, virtually every CFA Franc nation has seen a Real GDP DECREASE from their 1970s levels. Decreasing Real GDP, followed by a stagnated export economy, has resulted in economic ruin for the people of the CFA Franc Nations. The Ivory Coast's real GDP has decreased over 30% since 1978. Cameroon and the Republic of Congo have seen similar dips.

A more nefarious element of the CFA Franc is that Franc requires 50% of participating countries' foreign reserves to be stored with the French central bank. In addition, France require 20% additional deposits for liabilities.

This does two things. It extracts much needed wealth out of Africa, and into France. It makes the French economy look stronger on paper, and increases their government bond rating, at the expense of Africa.

Depriving Africa of their own wealth has caused underdevelopment in these countries. The problem of underdevelopment was further compounded by the fact that Africa no longer became a reliable place to store investments. This caused CFA member countries to see Billions in wealth leave their already-impooverished country and go to Europe, America and abroad. Since 1979, the Ivory Coast saw \$40B leave the country in capital flight. The same story applies to other member nations. Capital Flight accounts for a very tiny percentage of money leaving the country, however, that relatively minor amount alone could have reduced African poverty by 55% had it

remained within their respective countries.

To add insult to injury, France makes it incredibly difficult for CFA member states to access THEIR OWN MONEY stored in French banks. The CDA Franc charter states that 50% of foreign reserves must be stored in French central banks, with an additional 20% stored for liability.

If a member country wants access to their own money, they must do it in the form of a loan, which must be paid back, INCLUDING INTEREST AND COMMISSION. Yes... France charges African countries INTEREST IN ORDER TO ACCESS THEIR OWN MONEY. To add insult to injury, France will only grant access to that money if the countries's financial documents look stable enough...which they usually never do, because the CFA Franc system is designed such that there is little to no financial strength.” —[Apollo](#)

 CHEROKEE - CHICKASAW - CHOCTAW - CREEK - SEMINOLE

September 21, 2023

**Leaders of the Five Tribes pass a resolution of no confidence
 in Wes Nofire or the position of Native American Liaison
 within Oklahoma Governor Stitt's administration**

“Wes Nofire cannot be an effective advocate for tribes in Oklahoma or act as a bridge between the governor and tribes when he clearly echoes the same anti-tribal rhetoric as the governor. Governor Stitt has proven to be opposed to tribal sovereignty. He has appointed Wes Nofire to simply parrot his views opposing tribes not only as independent sovereigns, but as valued partners in strengthening the state. We can only conclude that Wes Nofire will continue to oppose tribal sovereignty under Governor Stitt's direction. Therefore, we do not have confidence that he can fulfill the role as Native American Liaison.”

A Resolution expressing no confidence in Wes Nofire or the position of Native American Liaison within Governor Stitt's Administration

Resolution No. 23-

Chuck Hoskin Jr.
Principal Chief

Bill Anoatubby
Governor

Gary Bolton
Chief

Principal Chief

Lewis J. Johnson
Chief

WHEREAS, the Inter-Tribal Council of the Five Civilized Tribes (ITC) is an organization that unites the tribal governments of the Cherokee, Chickasaw, Choctaw, Muscogee (Creek) and Seminole Nations, representing approximately 815,000 Indian people throughout the United States; and

WHEREAS, under Oklahoma Law, the Governor can appoint a Native American Liaison responsible for monitoring state/tribal compacts, tribal consultation policies, and ensuring consistent outreach and relationship-building with tribes; and

WHEREAS, Governor Stitt's record of hostility against tribal sovereignty includes seeking the termination of state / tribal gaming compacts, refusing to negotiate in good faith on a renewal of the state / tribal hunting and fishing compacts, criticizing the historic McGirt decision, seeking to have the McGirt decision reversed or undermined in subsequent court cases, supporting the exclusion of Tulsa and other municipal governments from the scope of the McGirt decision, and that the assertion of tribal sovereignty by Tribes in Oklahoma was a "storm of injustice"; and

WHEREAS, Wes Nofire aligns with Governor Stitt's views on tribal sovereignty and the position of Native American Liaison is ineffective under Governor Stitt's leadership; and

NOW THEREFORE LET IT BE RESOLVED THAT, the Inter-Tribal Council of the Five Civilized Tribes does not support Wes Nofire and the role of Native American Liaison in Governor Stitt's Administration until the Governor ceases his challenges to tribal sovereignty and engages in a constructive dialogue with Tribes to advance the best interests of all Oklahomans.

CERTIFICATION

The foregoing resolution was adopted by the Inter-Tribal Council of the Five Civilized Tribes meeting virtually on this 21st day of September 2023 by a vote of 20 for 0 against and 0 abstentions.

Chief Hoskin issues statement after the U.S. Senate confirms former AG Sara Hill as the first female Native American federal district judge in Oklahoma

“Today, on a bipartisan basis, the United States Senate made history, confirming former Cherokee Nation Attorney General Sara Hill as the first female Native American Oklahoma federal district judge.

Sara Hill earned bipartisan support, and support from an array of thoughtful individuals and organizations across the country, for the same reason Cherokee leaders placed so much confidence in her: She is a brilliant attorney with a commitment to public service, fairness, justice and the rule of law.

I am especially appreciative of the support offered by Oklahoma Senators James Lankford and Markwayne Mullin, who worked with the Biden administration to confirm Sara Hill. Oklahoma Attorney General Gentner Drummond’s support was also so impactful and appreciated. In supporting Sara Hill, as well as fellow pending nominee John Russell, Senators Lankford and Mullin placed our collective interest in improving access to justice in Oklahoma federal courts over genuine partisan divisions with the president on other matters. By the same token, President Biden deserves praise for his history-making nomination of Sara Hill. I am also gratified that the Senate was largely unmoved by the small collection of special interest opponents of Sara Hill’s nomination, inexplicably led by Governor Kevin Stitt and the Oklahoma cockfighting industry.

Today is a great and historic day for the country for which we should all pause to celebrate.”

child sex abuse material

9 August 2023: “Twitter Exec Defends Restoring Account That Shared Child Sex Abuse Material

Executives at X, the company formerly known as Twitter, testified in front of an Australian Parliament hearing late Wednesday, and defended the restoration of an X account after it shared child sexual abuse material in late July. The incident attracted widespread attention because X owner Elon Musk personally intervened to reinstate the account after a violation that would normally result in a permanent ban from the social media platform.

Nick Pickles, the head of global government affairs at X, was asked about the incident by an Australian senator late Wednesday ET, early Thursday Australian local time, after Pickles first suggested there was a zero tolerance policy for child sex abuse material before seeming to contradict himself. Pickles said the offending account in question may have been sharing the content “out of outrage.”

“One of the challenges we see is, for example, people sharing this content out of outrage because they want to raise awareness of an issue and see something in the media,” Pickles testified, according to an audio livestream.

“So if there are circumstances where someone shares content but, under review, we decide the appropriate remediation is to remove the content but not the user,” Pickles continued.

There’s nothing in the X terms of service that says it’s okay to share child sexual abuse material if a user is doing it because they’re outraged over the images or looking to “raise awareness.” It’s generally understood that sharing child sex abuse materials, regardless of intent, is not only a federal crime in the U.S. and Australia, but re-victimizes the child.

The offending account is operated by a right-wing influencer who has previously insisted he was just sharing a news article, a claim that’s been disputed by journalists on X who point out the influencer watermarked the material he shared. The abuse material was reportedly one of the worst images ever created, showing a toddler being tortured, according to the *Washington Post*.

“When it was pointed out that this account, which had more than half a million followers, had tweeted an image containing child sexual abuse material—some of the most notorious and appalling child sexual abuse material—your boss, tweeted that the account had been suspended, the material had been deleted, but then after pressure from his followers, your boss Elon Musk, reinstated the account,” Australian senator David Shoebridge said during the hearing.

Shoebridge suggested there was a purely financial motivation for Musk to reinstate the account, a characterization with which Pickles disagreed.

The Australian government hearing, first reported by the Guardian, grew heated after Pickles insisted X has made tackling child abuse material a priority since Musk bought the company in October 2022. Musk’s mass layoffs actually gutted the Child Safety Team, according to multiple reports.

Australian senator Helen Polley pointed to research that child sexual abuse material had become more common since Musk bought the company. Polley questioned why child sexual

abuse material wouldn't result in an immediate ban on X since it was a crime, regardless of intent.

"There is no excuse, whether you're posting something through outrage, which to me just is not logical, that your account should not be permanently suspended," Polley said.

Management of X has been a hot-button issue in Australia since Musk bought the platform in late 2022. And Australian parliamentary hearings tend to be more harsh on U.S.-based technology executives as a rule, but senators were particularly aghast at the answers they were getting from Pickles on Wednesday. Pickles repeatedly said that X's general policy is permanent suspension for sharing child sex abuse material, but in some instances it can take repeated violations, a contradiction that senators pointed out.

"You can see why we don't have a lot of faith and trust in what you're saying here today," Senator Polley told Pickles." —[Forbes](#) [behind a pay wall]

General Interference with Organizations and Production

(1) Insist on doing everything through "channels." Never permit short-cuts to be taken in order to expedite decisions.

(2) Make "speeches." Talk as frequently as possible and at great length. Illustrate your "points" by long anecdotes and accounts of personal experiences. Never hesitate to make a few appropriate "patriotic" comments.

(3) When possible, refer all matters to committees, for "further study and consideration." Attempt to make the committees as large as possible — never less than five.

(4) Bring up irrelevant issues as frequently as possible.

(5) Haggle over precise wordings of communications, minutes, resolutions.

(6) Refer back to matters decided upon at the last meeting and attempt to re-open the question of the advisability of that decision.

(7) Advocate "caution." Be "reasonable" and urge your fellow-conferes to be "reasonable" and avoid haste which might result in embarrassments or difficulties later on.

(8) Be worried about the propriety of any decision — raise the question of whether such action as is contemplated lies within the jurisdiction of the group or whether it might conflict with the policy of some higher echelon.

Countless heat records were broken in July across the planet as intense heat domes pushed temperatures to unprecedented levels.

In Asia, China registered its highest temperature in the country's recorded history at 126°F (52.2°C), while in Iran, the heat index reached 152°F (66.7°C), near the limits of human survival.

All-time highs were broken in Southern Europe as temperatures soared to 118.8°F (48.2°C) in Sardinia during a brutally prolonged heatwave that brought water temperatures in the Mediterranean to the highest on record.

The same heat dome brought record temperatures to Northern Africa as Tunis, Tunisia, recorded its highest temperature in recorded history of 120.2°F (49°C). These hot, dry conditions also sparked deadly wildfires killing at least 34 in Algeria and 3 in Sicily.

North America also saw too many heat records to count. Most notably, Phoenix saw the hottest month of any US city on record, while Death Valley recorded a midnight temperature of 120°F (49°C) degrees, by far the warmest midnight temperature ever recorded.

A combination of a robust El Niño and climate change were likely the biggest factors in why July was so hot.

New research from a group that's the antithesis of “alarmists”—The British Institute of Actuaries—just dropped a bombshell. They have zero motives to exaggerate.

Their take? We've SEVERELY underpriced climate risk.

Recall the 2008 financial crisis? Dubbed a ‘Minsky Moment’—a crash where asset values weren't what they seemed. Now, climate change is steering us toward a “Climate Minsky Moment”. Assets worldwide are OVERvalued because climate risks aren't properly accounted for.

Scenes we're witnessing—megafires, towns incinerated, Antarctica melting at alarming rates—are events theorized for 2050. Yet, here we are in 2023. Earth's warning sign: Our current models? Way off.

So our current crises were predicted for 2050. We're living the future.

The craziest part is, we're still relying on economic models see just 2% GDP drop for a 3°C rise.

Reality check: we're at around 1.5°C and the toll is massive. Our modeling needs a serious reboot.

In fact, many models assume GDP growth in a “Hothouse EarthÓ” scenario. Widespread crop failures, water scarcity, and town-leveling events somehow lead to growth? The Institute of Actuaries highlights the glaring flaws in such projections.

Historically, civilizations can't bear a 50% GDP loss. The stakes? Our very existence. This

isn't a drill—it's a clarion call for our age. The real threat of civilizational collapse is closer than we think. Act now, or our future might be history.” —[Umais](#)

clue

The word “clue” comes from the Greek myth of Theseus and the Mintatour. The word “clew” in Greek mythology referred to a ball of yarn. Theseus was claimed to have escaped from the Mintatour’s labyrinth by unrolling the ball of yarn as he entered and following it back out after defeating the Mintatour. The word originally meant something that guides your path but eventually took on the modern meaning of any guidance that helps discover the truth.

10 July 2023: "The US has announced it is complying with a Ukrainian request to supply it with controversial cluster munitions.

The move has been criticised by human rights groups as the weapon is banned by more than 100 countries.

Cluster munitions are a method of dispersing large numbers of tiny bomblets from a rocket, missile or artillery shell that scatters them in mid-flight over a wide area.

They are intended to explode on impact but a significant proportion are "duds", meaning they don't explode initially - this happens especially if they land on wet or soft ground.

They can then explode at a later date on being picked up or trodden on, killing or maiming the victim.

From a military perspective, they can be horribly effective when used against dug-in ground troops in trenches and fortified positions, rendering large areas too dangerous to move around in until carefully cleared.

More than 100 countries, including the UK, France, and Germany, have signed an international treaty - the Convention on Cluster Munitions - that outlaws the use or stockpiling of these weapons due to their indiscriminate effect on civilian populations.

Children are particularly prone to injury as the bomblets can resemble a small toy left in a residential or farmland area and are often picked up out of curiosity.

coffee

28 July 2023: “Uganda President Museveni to Putin:

“One facet of neo-colonialism and colonialism was Africa being confined to producing only raw materials, crops, like coffee, and minerals. I can give you an example: the global business for coffee is worth \$460 billion. That is the value of the coffee business in the world. But of those \$460 billion the coffee producing countries of the whole world share only \$25 billion and Africa shares only \$2.4 billion out of \$460 billion.

This issue is the biggest stunting factor why the African economies are stunted; they do not grow, because all the value is taken by other people. Germany earns more from coffee than the whole of Africa. Germany earns \$6.85 billion from coffee, while Africa earns only \$2.4 B 2.5 billion. This is the big scandal.

So, what I want to propose to Russia and China is to discourage as a policy the importing of raw materials from Africa, to instead work with the Africans to add value at source. This would within a very short time transform the economies of Africa from low- and mid-income to high- and middle-high income because we see from the example of Uganda that everything is depressed now; production is high but we are still producing raw materials.” ” —[COMBATE](#)

compressors

11 December 2023: “Tube vs Optical compressors

Tube compressors and optical compressors have unique sonic characteristics and vary in applications.

Tube Compressors:

- Sound Character: Tube compressors, using vacuum tubes in their circuitry, often provide a warm, harmonically rich sound. They can add coloration to the signal.
- Attack and Release: Generally, tube compressors offer a wide range of attack and release times, allowing for versatile dynamics control.
- Applications: Commonly used for adding warmth and character to vocals, instruments, and overall mix bus. They are suitable for a variety of genres, especially where a vintage, analog warmth is desired.

(Fairchild 670)

Optical Compressors:

- Sound Character: Optical compressors use a light-dependent resistor (LDR) for compression. They are known for a smooth and transparent sound without much coloration.
- Attack and Release: Optical compressors often have a slower response, providing a gentle compression suitable for smoothing out dynamics.
- Applications: Ideal for scenarios where transparent compression is needed, such as leveling vocals, acoustic instruments, and scenarios where the goal is subtlety rather than a pronounced coloration.

(ACME Audio XLA-3)

ÑÑÑÑÑÑÑÑÑÑ-

There are also tube optical compressors that combine the warmth of vacuum tubes with the smooth compression characteristics of optical components.

They use a tube for gain control and an optical circuit for compression, resulting in a unique and pleasant sonic character.

(CL 1B or LA-2A)” —[Nathaniel W.](#)

22 December 2023: “How does a compressor work?

For beginners.

I already made that post but people still ask about it. Let’s go then.

Imagine the situation where you have a vocalist that sometimes shouts loud and sometimes he is whispering.

You won't ever be able to set the level for this track, because loudness changes all the time too drastically. Your vocals will be either too loud sometimes or too quiet.

· What’s the solution?

The solution is to compress the sound.

· What does that mean?

It means that everytime your vocalist starts to shout, compressor will automatically reduce the level.

Like a person that sits behind the mixer and turns the volume knob down when the artist sings too loud.

· What you will get?

You will get a vocal track with more even sound. Quiet parts will stay untouched yet louder parts will be tamed. As a result, all the vocals are perfectly audible and nothing is too loud.

· How you achieve that?

You achieve that by setting up a few controls.

- Threshold: you should tell the compressor what is “too loud”. At this level compressor begins to work and starts to turn down the volume.

- Ratio: you should tell the compressor by how much level should be reduced.

2:1 means that everything that is considered “too loud”, according to threshold, should be reduced 2x in level.

4:1 is 4x reduced in level, etc.

∞:1 means that signal will be infinitely reduced in level after the threshold, hence nothing will surpass the threshold you will set. This is how limiters work. They limit the signal by your

threshold.

This is already enough to understand how compressor works.

But we will look at more basic controls.

- Attack: you should tell the compressor how quickly it should reduce the level since it became “too loud”.

20 ms attack means that compressor will reach target amount of compression in 20 ms since the audio became “too loud”.

1 ms attack means that compressor will tame the signal almost immediately after it exceeded the threshold.

- Release: you should tell the compressor how quickly it should restore the original level since the audio is not exceeding the threshold anymore.

100 ms release means that compressor will restore the original level in 100 ms after audio is not “too loud” anymore.

· Why do you need to set attack and release?

For example, some audio has very short peaks, which you might want to keep. It can be transients from your instrument, like pulling a guitar string or pressing a piano note. This moment is louder and it's a common practice to not compress it.

If compressor worked immediately it would destroy your transients, hence your sound.

And the opposite situation, you want to tame some nasty peaks, which happen very quick, and you need the fastest settings for it.

· However, even at slow settings, compressor's job still happens very quickly, it would be impossible for a human to turn the volume up and down that fast.

My recommendation for beginners is to use compressors with good visual feedback (like Fabfilter Pro C2), you will understand what's happening much faster and see how you affect the sound and compressor's work by turning different knobs.

Analog modeled compressors can have fixed parameters and behavior, which makes them unique and applicable for certain applications, not for everything. But they can be easier to set up.

Some compressors, even though their parameters are not fixed, they can't work slowly, or quickly, which again, makes them applicable only for certain purposes.

· Dynamic range - difference between the loudest and most quiet part of the signal.

· Compressor - a device, designed to reduce dynamic range.” —[Nathaniel W.](#)

kəm'pju:-tə (Received Pronunciation), **kəm'pju:-tə** (General American)

noun

1. (now *rare*, chiefly *historical*) a person employed to perform computations.

Historically, a male is called a **computer** or **computist** and a female is called a **comptress**.

2. A programmable device that accepts data from input and/or memory, performs prescribed mathematical calculations and logical operations, and outputs, displays, or stores the results of these computations. Most commonly an electronic digital computer.

Some examples include super computers, mainframes, minicomputers, microcomputers, desktop computers, laptop computers, tablets, smartphones, and embedded systems.

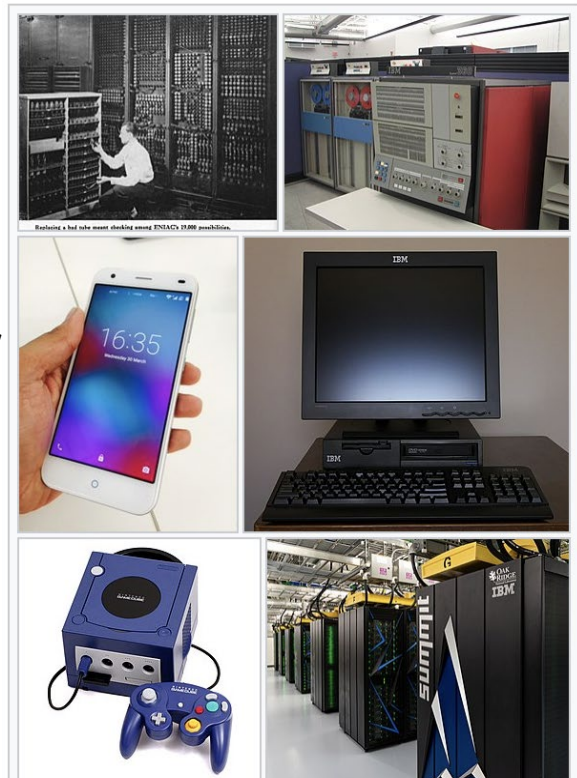

etymology: 1600-50 CE Modern English *compute* + *-er*, related to Middle French *computeur*; first known use (for an occupation) in the 1613 book *The Yong Mans Gleanings* by Richard Brathwait: “I haue [sic] read the truest computer of Times, and the best Arithmetician that euer [sic] breathed, and he reduceth thy dayes into a short number.”; first use referencing a calculating machine in 1897

From the Wikipedia page on [Computer](#)

A **computer** is a digital electronic machine that can be programmed to carry out sequences of arithmetic or logical operations (computation) automatically. Modern computers can perform generic sets of operations known as programs. These programs enable computers to perform a wide range of tasks. A **computer system** is a “complete” computer that includes the hardware, operating system (main software), and peripheral equipment needed and used for “full” operation. This term may also refer to a group of computers that are linked and function together, such as a computer network or computer cluster.

A broad range of industrial and consumer products use computers as control systems. Simple special-purpose devices like microwave ovens and remote controls are included, as are factory devices like industrial robots and computer-aided design, as well as general-purpose devices like personal computers and mobile devices like smartphones. Computers power the Internet, which links billions of other computers and users.

Early computers were meant to be used only for calculations. Simple manual instruments like the abacus have aided people in doing calculations since ancient times. Early in the Industrial Revolution, some mechanical devices

were built to automate long tedious tasks, such as guiding patterns for looms. More sophisticated electrical machines did specialized analog calculations in the early 20th century. The first digital electronic calculating machines were developed during World War II. The first semiconductor transistors in the late 1940s were followed by the silicon-based MOSFET (MOS transistor) and monolithic integrated circuit (IC) chip technologies in the late 1950s, leading to the microprocessor and the microcomputer revolution in the 1970s. The speed, power and versatility of computers have been increasing dramatically ever since then, with transistor counts increasing at a rapid pace (as predicted by Moore's law), leading to the Digital Revolution during the late 20th to early 21st centuries.

Conventionally, a modern computer consists of at least one processing element, typically a central processing unit (CPU) in the form of a microprocessor, along with some type of computer memory, typically semiconductor memory chips. The processing element carries out arithmetic and logical operations, and a sequencing and control unit can change the order of operations in response to stored information. Peripheral devices include input devices (keyboards, mice, joystick, etc.), output devices (monitor screens, printers, etc.), and input/output devices that perform both functions (e.g., the 2000s-era touchscreen). Peripheral devices allow information to be retrieved from an external source and they enable the result of operations to be saved and retrieved.

6 June 2023 at 7:24 am: “BREAKING: In the dead of night, Atlanta's City Council voted 11-4 to approve \$67 million for a police training center that will be an incubator for the criminalization of protest and attacks on low-income communities. ” —[Steve Donziger](#)

6 June 2023 at 2:57 am: “Well, the Atlanta City Council passed \$67 million in funding for Cop City, by an 11-4 margin, after over 15 hours of essentially unanimous public comment against it. This was a historic 24 hours. Absolutely shattered every record of public turnout. Made clear, unequivocally, that Atlanta residents are against Cop City. Over a thousand people turned out, repping many more. Incredibly diverse crew. Everyday Atlantans. Firmly against Cop City. This vote drives home: there is no democracy in Atlanta. This project most directly impacts those who have no representation on council, and the hundreds/thousands who do have Council representatives were all ignored today. Every Councilmember who voted in favor of Cop City did so knowing that they were siding with powerful corporations and the police foundation, not the people of Atlanta. There should be no confusion that 11 councilmembers directly, knowingly sold out their constituents. And while there’s no democracy in Atlanta, there is a MOVEMENT in Atlanta. One that has never been dependent on council for its legitimacy or action. One that will keep fighting just as it has for years. One important point: this was us using the “right” channels that the powerful always tell us to use. And doing so in a historic way. And still being ignored. So Council only has itself to blame when people decide to use channels that are not condoned by the powerful. Thank you to the councilmembers who voted no: @LilianaforATL (who did a lot of work behind the scenes to try to stop this), @jasonsdozier, Keisha Waites, and @antoniolewisatl.” —[StopCopCity](#)

“1. Funds the police and promotes effective prosecution of crimes affecting families today, including by funding 100,000 additional police officers who will be recruited, trained, hired, and supervised consistent with the standards in the President’s Executive Order to advance effective, accountable community policing in order to enhance trust and public safety;”

“As President Biden said during his State of the Union Address, “We should all agree the answer is not to defund the police. It’s to fund the police. Fund them with the resources and training they need to protect our communities.” We cannot abandon our streets, and we should not have to choose between safety, public trust, and equal justice.”

“Put 100,000 additional officers for effective accountable, community policing on our streets. The Safer America Plan will provide the investment necessary to recruit, train, support, and manage 100,000 additional police officers for effective, accountable community policing over the next five years. Specifically, the Plan calls on Congress to appropriate \$10.877 billion in mandatory funding over five years for the COPS Hiring Program, which, combined with the President’s discretionary funding proposal for this program, will fully fund this goal with \$12.817 billion in total. These funds will be used to get officers out of their stations and squad cars and into the community, walking the beat on foot patrols that have been shown to enhance officer morale, improve community relations, and have a deterrent effect on crime.”

Costa Mesa bully

Note that the Costa Mesa buly is a different person than the Costa Mesa thief, even though the Costa Mesa buly is also a thief.

I am writing this to say the many things I would have liked to have been able to say in person during the years the Costa Mesa bully had an office next to the one where I worked.

Of course we wouldn't have gotten to this paragraph because the mere mention of the word "bully" would generate you yelling obscenities and insults for several hours. You would continue the angry shouting for hours after I gave up trying to talk with you and locked the office door to prevent any physical violence.

asdf

asdf

asdf

asdf

asdf

asdf

The first question is: is the Costa Mesa bully actually a bully?

He gets extremely angry at being called a bully and will often shout obscenities through the walls for one to four hours afterwards.

His initial response is that he isn't a bully, that I'm projecting, and that I am the bully.

When I ask for examples of how I am being a bully (because I would like to stop any and all bullying activity), the only examples are cases where he gave me orders to do something he wanted done and I declined to do the thing, and that was me bullying him into having to do the thing himself. I could be wrong, but I don't think that's what bullying means.

When he asks me for examples of what I think are him being a bully, he angrily states that none of these things are true. He claims that I am hallucinating, that I am a fiction machine, and that I am making these things up just to hurt his feelings. My list includes: physical violence, theft, ordering me and others around, approaching me and others in a physically threatening manner, shouting obscenities in person and then through the walls for hours (the longest being 7-1/2 hours), making up false negative lies about me and others, making up false positive things about himself, denying ever having done anything wrong, claiming that he is the most perfect light being that we will ever meet, claiming that he was child abused by hundreds of people (parents, siblings, teachers, fellow students, principals, and even two school psychiatrists), lots of little personal insults, refusing to allow others to respond to his accusations, and dominating conversations (I have timed conversations I've heard him have with others and he speaks an average of a little more than 90% of the time and gets angry when others want to contribute to the conversation).

I am pretty certain that he is a bully.

I have had the misfortune of having to work in an office next to a bully.

Normally I try to avoid bullies. This time I can't.

My goal here is to summarize my observations of what a bully is like.

So after his arrival, my first encounter was the bully spending 45 minutes complaining about having been abused as a child.

The bully strongly objected to anyone else (there were five of us there) speaking.

At first I accepted the child abuse as fact, but I started to notice that the bully's discussion of child abuse didn't include any of the things from my own experience or the experiences of others.

Over time, the bully revealed that the child abuse was done by his parents, all of his siblings, the teachers at multiple schools, the other children at multiple schools, and psychologists at two different schools. That's a large scale coordinated campaign of child abuse.

Further, the bully revealed that all of his child abuse was others wrongly accusing him of violence, theft, bullying, narcissism, and other similar claims, all of which were in his presentation were never true.

The bully freely admitted that all of the child abuse was just claims that the bully had done something wrong. The bully admitted there was never any physical violence or sexual assault. The bully firmly and repeatedly states that physical violence is minor compared to “damaging words”.

I faced a lot of bullying until high school. I was a premature baby and very small for my age until the summer before high school and therefore a target of bullies. My mother was highly abusive of my sisters and me (in ways that I keep hearing others who faced child abuse also experiencing). When I was a child I was repeatedly over years sexually assaulted by a male relative.

I am highly suspicious of the bully's claims of child abuse. It sounds to me that what he perceived as child abuse was simply other people pointing out that he was a bully.

Costa Mesa thief

Note that the Costa Mesa thief is a different person than the Costa Mesa bully, even though the Costa Mesa bully is also a thief.

Thieves will be thieves. It is in their nature. This is my experience with one particular thief.

I will not be revealing the name of the thief. I am calling him the Costa Mesa thief because that is where I met him.

I first met him because he dealt large quantities of cannabis to a friend of mine, Michael M.

One day I was walking down the street and he pulled up next to me and offered me a ride. I got into his car.

He said that he had to take a detour and started travelling back and to the side from the path I had been on.

He pulled up next to a car on a side street and handed me a remote grabbing tool and then told me to use it to steal the keys off the middle panel in the car.

I objected. He said he had been watching the guy for a long time, the car owner was a “bad rich guy“, and this was his opportunity to make a copy of the guy’s key so he could break into his house.

This all had obviously been his plan whne he spotted me.

I refused to steal. He got angry, stole the keys himself, and told me to get out of his car because he needed to rush to make copies of the keys and return them before the car owner got out of a meeting.

I ended up walking a long distance just to get back to where I had been picked up and offered a ride.

I told michaelm about this incident, but michelm didn’t believe me.

This particular thief bragged about making hundreds of thousands of dollars a year selling cannabis and not paying any taxes. He claimed to have a bunch of gold stored in a variety of places.

The worst incident happened several years after the first incident.

I was behind on paying the rent on my storage unit. michaelm said that the thief would help out.

The thief negotiated a deal with the storage place to pay 1/3 of the owed rent and I got 72 hours to get moved out. The thief paid that money and money for the new storage place and offered to transport everything in his truck.

During the moving, the thief looked through every box, which I thought was incredibly nosy, but I needed his help. He would often ask me what was valuable in the box, which should have been a red flag.

When he saw the boxes with the tapes, hard drives, and various digital media, he offered to take it all to salvage and sell it for the iron. I said no.

The moving was done fast, in a rush.

As we were finishing up, he revealed tht he had contacted my sisters and that they were going to pay for the entire move. This was a surprise to me. I don’t even know how he got contact info on my sisters. Maybe he say a name and phone number. He sid he was padding the bill and asked if I wanted him to add an extra \$100 for me. I said no.

I contacted my sisters and let them know he was planning on padding the bill. He charged them the full price on the old rental space (not the 1/3 he paid), the new rental space, his gas, and some other charges.

He did make a strange comment at the end. He said, “don’t worry, everything is there.”

That prompted me to go through every box and check. he had stolen every box that I had identified as having something valuable, as well as all of the boxes containing media with iron.

That included tapes of almost every show my band did (mostly audio, some video), tapes of almost every rehearsal, tapes of new unfinished songs, tapes from other obscure unsigned bands, tapes of an entire campaign of D&D game play, tapes of programming I’d done going back to the 1960s, including for DEC, IBM, CDC, and Sperry Rand minicomputers and mainframes.

That included the vast majority of my hard drives, as well as floppy disks (of all three sizes), Zip drives, and other digital media. That included almost my entire programming career, as well as artwork, music, and materials donated to me by artists, musicians, programmers, engineers, Egyptologists, professors, etc.

The lesson is to avoid thieves. Like scorpions, it is their nature.

Eugene Debs

Democratic President Woodrow Wilson called Eugene V Debs a “traitor to the country.”

Debs was indicted and convicted under the same Espionage Act being used against Julian Assange for making speeches that criticized President Wilson and World War I.

Debs ran for president from prison and won more than a million votes.

Debs' speech prior to sentencing:

Your Honor,

years ago I recognized my kinship with all living beings, and I made up my mind that I was not one bit better than the meanest on earth. I said then, and I say now, that while there is a lower class, I am in it, and while there is a criminal element I am of it, and while there is a soul in prison, I am not free.

If the law under which I have been convicted is a good law, then there is no reason why sentence should not be pronounced upon me. I listened to all that was said in this court in support and justification of this prosecution, but my mind remains unchanged. I look upon the Espionage Law as a despotic enactment in flagrant conflict with democratic principles and with the spirit of free institutions.

Your Honor, I have stated in this court that I am opposed to form of our present Government; that I am opposed to the social system in which we live; that I believed in the change of both—but by perfectly peaceable and orderly means.

Let me call your attention to the fact this morning that in this system five per cent of our people own and control two-thirds of our wealth; sixty-five per cent of the people, embracing the working class who produce all wealth, have but five per cent to show for it.

Standing here this morning, I recall my boyhood. At fourteen I went to work in a railroad shop; at sixteen I was firing a freight engine on a railroad. I remember all the hardships and privations of that earlier day, and from that time until now my heart has been with the working class. I could have been in Congress long ago. I have preferred to go to prison. The choice has been deliberately made. I could not have done otherwise. I have no regret.

In the struggle, the unceasing struggle, between the toilers and producers and their exploiters, I have tried, as best I might, to serve those among whom I was born, with whom I expect to share my lot until the end of my days.

I am thinking this morning of the men in the mills and factories; I am thinking of the men in the mines and on the railroads; I am thinking of the women who, for a paltry wage, are compelled to work out their lives; of the little children, who in this system, are robbed of their childhood, and in their early, tender years are seized in the remorseless grasp of Mammon, and forced into the industrial dungeons, there to feed the machines while they themselves are being starved body and soul. I see

them dwarfed, diseased, stunted, their little lives broken, and their hopes blasted, because in this high noon of our twentieth century civilization money is still so much more important than human life. Gold is god and rules in the affairs of men.

The little girls, and there are a million of them in this country, this, the most favored land beneath the bending skies, a land in which we have vast areas of rich and fertile soil, material resources in inexhaustible abundance, the most marvelous productive machinery on earth, millions of eager workers ready to apply their labor to that machinery to produce in abundance for every man, woman, and child—and if there are still vast numbers of our people who are the victims of poverty and whose lives are an unceasing struggle all the way from youth to old age, until at last death comes to their rescue and stills the aching heart, it is not the fault of the Almighty, it cannot be charged to nature, but it is due entirely to the outgrown social system that ought to be abolished, not only in the interest of the working class, but in a higher interest of all humanity.

I think of these little children, the girls that are in the textile mills of all description in the east, in the cotton factories of the south, I think of them at work in a vitiated atmosphere, I think of them at work when they ought to be at play or at school, I think that when they do grow up, if they live long enough to approach the marriage state, they are unfit for it. Their nerves are worn out, their tissue is exhausted, their vitality is spent. They have been fed to industry. Their lives have been coined into gold. Their offspring are born tired. That is why there are so many failures in our modern life.

Your Honor, the five per cent of the people that I have made reference to constitute that element that absolutely rules our country. They privately own all our public necessities. They wear no crowns; they wield no scepters, they sit upon no thrones; and yet they are our economic masters and our political rulers. They control this Government and all of its institutions. They control the courts.

And Your Honor, if you will permit me, I wish to make just one correction. It was stated here that I had charged that all federal judges are crooks. The charge is absolutely untrue. I did say that all federal judges are appointed through the influence and power of the capitalist class and not the working class. If that statement is not true, I am more than willing to retract it.

The five per cent of our people who own and control all of the sources of wealth, all of the nation's industries, all of the means of our common life, it is they who declare war. It is they who make peace. It is they who control our destiny. And so long as this is true, we can make no just claim to being a democratic government, a self-governing people.

I believe, Your Honor, in common with all Socialists, that this nation ought to own and control its own industries. I believe, as all Socialists do, that all things that are jointly needed and used ought to be jointly owned—that industry, the basis of life, instead of being the private property of the few and operated for their enrichment, ought to be the common property of all, democratically administered in the interest of all.

John D. Rockefeller has today an income of sixty million dollars a year, five million dollars a month, two hundred thousand dollars a day. He does not produce a penny of it. I make no attack upon Mr. Rockefeller personally. I do not in the least dislike him. If he were in need, and it were in my power to serve him, I should serve him as gladly as I would any other human being. I have no quarrel with Mr. Rockefeller personally, nor with any other capitalist. I am simply opposing a social order in which it is possible for one man who does absolutely nothing that is useful, to amass a fortune of hundreds of millions of dollars, while millions of men and women who work all of the days of their lives secure barely enough for existence.

This order of things cannot always endure. I have registered my protest against it. I recognize the feebleness of my effort, but, fortunately, I am not alone. There are multiplied thousands of others who, like myself, have come to realize that before we may truly enjoy the blessings of civilized life, we must reorganize society upon a mutual and cooperative basis; and to this end we have organized a great economic and political movement that spreads over the face of all the earth.

There are today upwards of sixty millions of Socialists, loyal, devoted adherents to this cause, regardless of nationality, race, creed, color, or sex. They are all making common cause. They are spreading the propaganda of the new social order. They are waiting, watching, and working through all the hours of the day and night. They are still in the minority. But they have learned how to be patient and to bide their time. They feel they know, indeed, that the time is coming, in spite of all opposition, all persecution, when this emancipating gospel will spread among all the peoples, and when this minority will become the triumphant majority and, sweeping into power, inaugurate the greatest social and economic change in history.

In that day we shall have the universal commonwealth—not the destruction of the nation, but, on the contrary, the harmonious cooperation of every nation with every other nation on earth. In that day war will curse this earth no more.

I have been accused, Your Honor, of being an enemy of the soldier. I hope I am laying no flattering unction to my soul when I say that I don't believe the soldier has a more sympathetic friend than I am. If I had my way, there would be no soldiers. But I realize the sacrifice they are making, Your Honor. I can think of them. I can feel for them. I can sympathize with them. That is one of the reasons why I have been doing what little has been in my power to bring about a condition of affairs in this country worthy of the sacrifices they have made and that they are now making in its behalf.

Your Honor, in a local paper yesterday there was some editorial exultation about my prospective imprisonment. I do not resent it in the least. I can understand it perfectly. In the same paper there appears an editorial this morning that has in it a hint of the wrong to which I have been trying to call attention. [He reads:]

A Senator of the United States receives a salary of \$7,500 to \$45,000 for the six years for which he is elected. One of the candidates for Senator from a state adjoining Ohio is reported to have spent through his committee \$150,000 to secure the nomination. For advertising he spent \$35,000; for printing \$30,000; for traveling expenses \$10,000, and the rest in ways known to political managers.

The theory is that public office is as open to a poor man as to a rich man. One may easily imagine, however, how slight a chance one of ordinary resources would have in a contest against this man who was willing to spend more than three times his six years' salary merely to secure a nomination. Were these conditions to hold in every state, the Senate would soon become again what it was once held to be, a rich men's club.

Campaign expenditures have been the subject of much restrictive legislation in recent years, but it has not always reached the mark. The authors of primary reform have accomplished some of the things they set out to do, but they have not yet taken the bank roll out of politics.

They never *will* take it out of politics, they never can take it out of politics, in this system.

Your Honor, I wish to make acknowledgment of my thanks to the counsel for the defense. They have not only defended me with exceptional legal ability, but with a personal attachment and devotion of which I am deeply sensible, and which I can never forget.

Your Honor, I ask no mercy. I plead for no immunity. I realize that finally the right must prevail. I never so clearly comprehended as now the great struggle between the powers of greed on the one hand and upon the other the rising hosts of freedom.

I can see the dawn of a better day for humanity. The people are awakening. In due course they will come to their own.

When the mariner, sailing over tropic seas, looks for relief from his weary watch, he turns his eyes

toward the southern cross, burning luridly above the tempest-vexed ocean. As the midnight approaches, the southern cross begins to bend, and the whirling worlds change their places, and with starry finger-points the Almighty marks the passage of time upon the dial of the universe, and though no bell may beat the glad tidings, the lookout knows that the midnight is passing and that relief and rest are close at hand.

Let the people everywhere take heart and hope everywhere, for the cross is bending, the midnight is passing, and joy cometh with the morning.

Your Honor, I thank you, and I thank all of this Court for their courtesy, for their kindness, which I shall remember always.

I am prepared to receive your sentence.

2 June 2023: “Consider that SNAP (i.e., food stamps) is a de facto subsidy for the agriculture industry. As part of the Farm Bill, the program keeps supply chains afloat for the agriculture industry and grocery stores. Instead of increasing access to food stamps during a time when millions of Americans are struggling to afford groceries, we are needlessly restricting access to it by adding more byzantine requirements to qualify. What happens when millions of people can’t afford food? Corporations supplying the food will raise prices to compensate for the loss to their profit margins. This is also known as inflation. In addition to new restrictions on food stamps, millions of students will now face increased financial hardship with the resumption of interest payments. 43 million people in the US carry student debt, with ~\$1.75 trillion outstanding. Consider that when the unemployment insurance benefits from COVID expired in September 2021, inflation increased soon after that; millions of Americans were in financial hardship. “Explainer: Democrats and Republicans have a tentative agreement on raising the debt ceiling. One of the provisions of the agreement is that it codifies an end to the pause on student loans—September 1st. This has huge and catastrophic financial implications for 50M+ people. Okay, this point is important:

Codifying the end to the pause doesn't just mean “the date to resume payment is September 1st.”

It means “the date to resume payment is September 1st and there is never a chance of extending this date further again, ever. It will be impossible.”

You may think “well wasn't the pause going to end anyway?”

Not necessarily. The pause has been extended 7 times, often mere days before it's set to expire. This deal takes away that possibility. A nail in the coffin to the end of a pause. So why is that bad?

Several reasons...

The Biden admin was gearing up to resume payments **because** they were going to simultaneously cancel lots of debt—20M accounts zeroed out. Because of COVID's impact, the Biden admin said returning to repayment **needed to be coupled** with relief. Otherwise you'd be ignoring COVID.

(This isn't our words—this is what the Biden admin argued before the Supreme Court back in February) If SCOTUS rules student debt relief is legal, Biden can say he took action on student debt—the second largest household debt in the country.

The problem is, WE DON'T KNOW what SCOTUS will rule. We're still waiting. Basically this debt ceiling deal puts the cart before the horse.

If SCOTUS rules Biden **cannot** implement relief, Biden can try again with a different legal authority—and he should. But what if it takes a few weeks/months to implement? What if he

doesn't try again? Borrowers will have no debt relief but be expected to make costly payments.

And that's the problem. This debt ceiling agreement ties Biden's hands behind his back—unnecessarily. It removes the one backstop that Biden can use to ensure borrowers don't have to resume payment without getting their relief.

What if the Biden admin comes across a new reason to extend the pause before Sept 1? What if they learn that 20% of the people with student loan accounts have incorrect information, leading to illegal debt collection practices? Too bad. The end to the pause was codified. Collect.

What if a new Fed Reserve report shows 80% of borrowers aren't able to make payments—and millions won't be able to afford medication or rent? Sorry. Dems cut a deal with Republicans back in June and didn't read the bill text thoroughly or bother to care.

What if payments begin and millions—literally millions—of people default on their debt. What if Seniors get their Social Security checks garnished in masse. Darn! Dems signed a debt ceiling deal with that pesky provision and didn't bother to put up a fight when it was time to.

There's many more reasons to extend the pause, and absolutely no reason to let Republicans push Biden in a corner. Biden will try to tell you this is the fault of Republicans and there was nothing he could do.

That won't be true. It is't true. The provision should go.” —[The Debt Collective](#)

Speaker of the Housew Kevin McCarthy, R-Calif, announced a plan to cut domestic programs, including Social Security and Medicare, in trade for an approval to raise the national debt limit by \$1.5 trillion. He named this the “Limit, Save, Grow Act.”

McCarthy’s plan would also impose newwork requirements to receive Medicaid and SNAP (food stamps), end the additional IRS funding from President Joe Biden’s Inflation Reduction Act, repeal green energy tax credits, rescind funding for the Covid-19 pandemic, expedite new oil drilling projects, and cut non-military budgets back to 2022 levels.

egg producers

21 November 2023: “BREAKING: America’s largest egg producers and industry groups illegally rigged the market to drive up the price of eggs, a jury has found.

Their price-fixing scheme included exporting millions of eggs overseas to drive up U.S. prices around Thanksgiving and Easter.

This antitrust suit covers actions from 1999 to 2008—the egg industry has been fighting it for 12 years.

But as we’ve documented, corporate profiteering by Big Ag is continuing to influence the price of eggs.

“After about 10 hours of deliberation, the jury found that egg producers Cal-Maine Foods and Rose Acre Farms, trade group United Egg Producers and exporting cooperative United States Egg Marketers unlawfully rigged the egg market by coordinating measures including early hen slaughters, exports, cage space increases and bans on cage backfilling, which involved replacing ill or dead laying hens with new ones.

“The verdict tees the parties up for a second trial phase, slated for the Wednesday and Thursday after Thanksgiving, during which the same jury will determine how much to award in damages to Kraft, Kellogg, General Mills and Nestle, who launched their antitrust claims nearly 12 years ago. [...]

“The price-fixing scheme involved various initiatives that restricted hen, and thus egg, supply, and United Egg Producers wanted all members and the entire egg industry to participate, the food companies asserted. The trade group encouraged egg producers to prematurely slaughter still-productive hens and promoted ‘early molting,’ where producers caused hens to lose their feathers and temporarily stop laying eggs by removing feed and water, and keeping them in dark areas, they claimed.”

Egg prices have gone up so much that Dollar Tree says they can’t sell them anymore.

What happened? We looked at what’s driving up the cost of eggs to figure it out.” —[More Perfect Union](#)

enemy of the good

There is a saying: “Don’t let the perfect be the enemy of the good.”

Volaire wrote in 1770 “Il meglio è l’inimico del bene”, a French translation of an old Italian proverb, meaning “the best is the enemy of the good.”

22 July 2023: “One thing you can always count on any time you hear a liberal say the words “don’t let the perfect be the enemy of the good” is that they already have healthcare and aren’t worried about having to spend tomorrow night sleeping on a sidewalk or under a bridge.”

EQ — equalization

23 April 2023: “Vocal EQ cheat sheet

For main vocal, this would be a great starting point to then adjust, but for those who are more experienced you'll naturally apply these things as your mixing and what feels right to the song at hand” —[Solar Heavy](#)

VOCAL EQ

STARTING POINT

- High pass >60Hz to remove unnecessary lows and rumble.
- Cut 200Hz slightly with a wide q to reduce muddy frequencies.
- Boost 500Hz to amplify vowels and make them cut through.
- Cut 5KHz to reduce the harsh sibilances.
- Engage the dynamic EQ mode in FF-Pro q3 so that my eq is smart and cuts only when the sibilances hit the threshold.
- Boost >8k with high shelf filter to add some air

5 July 2023: “EQ cheat sheet” — [Solar Heavy](#)

FREQUENCY

30HZ

Up to 30Hz is the frequency range people usually leave untreated properly. This range can be the reason your mixes are not loud enough.

This frequency range is where you'll find a lot of energy since the sub frequencies are located here. If this area is not equalized/balanced & compressed properly so it's tight and clear, you'll end up with a quiet mix and a frequency range that takes a lot of headroom.

5 July 2023: “Goes as low as 20. 20hz is the lowest audible range. Using a brick wall around 19 will increase the energy of your sub. That’s where the shaking comes. I prefer as much sup as possible and that 20-30 hz range helps. A boost in that area works. Logic compressors of frequency compression.” —[Blake Proffit](#)

- *The example above attenuates the side channel at 400 Hz to keep the kick mono and focused.*
- *A high-shelf filter is boosting side frequencies at 8.000 Hz to add width*
- *Lastly, a bell filter boosting the mid channel at 65 Hz adds presence and weight to the kick drum.*

Now, there is more space for the kick to cut through the mix

GET RID OF MUDDY FREQS.

Muddiness typically occurs in the low-mids, 200-500Hz.

- Step 1** Start by creating a bell shape, a narrow Q boost. Don't be afraid to boost it to a good amount.
- Step 2** Sweep through between 200-500Hz. Stop when you reach a point where it sounds really bad.
- Step 3** Flip the boost to 1-3dB cut.
- Step 4** Repeat this again & again till you get rid of all or most of the annoying freqs. You will see that your mix has now become more clean & mudless.

The graphic features two snare drum icons at the top corners. The central part is a screenshot of the FabFilter Pro-Q3 EQ interface, which is divided into five frequency bands: SUB (0-150HZ), BODY (150-250HZ), BOXY (500-800HZ), ATTACK (1.5KHZ-4.5KHZ), and RING (4.5KHZ-8KHZ). Each band has a corresponding frequency range and a set of instructions with an upward-pointing arrow indicating where to boost or cut. The interface also shows a gain scale on the right ranging from -12 dB to 0 dB.

BAND	FREQUENCY RANGE	INSTRUCTIONS
SUB	(0-150HZ)	USE A HIGH PASS FILTER AND REMOVE THIS AREA
BODY	(150-250HZ)	BOOST THIS TOO ADD THICKNESS
BOXY	(500-800HZ)	MAY NEED CUTTING TO REDUCE BOXINESS
ATTACK	(1.5KHZ-4.5KHZ)	BOOST TO MAKE IT POP
RING	(4.5KHZ-8KHZ)	BOOST TO ADD SIZZLE/RING

250HZ

This is a frequency range that causes the most problems when mixing since a lot of instruments are masking each other in this frequency range.

By attenuating around this area on certain instruments you can fix masking and reduce potential boominess in your mix. However, if you cut too much, your mix will become thin and lifeless. Be careful.

My technique that I used to find problematic areas

For now, I identify which frequency area contains the problem pretty quick

But it wasn't always like that. And I developed my method to identify those frequencies.

First of all, create a bell filter with pretty wide Q and cut it very hardly

Using broad Q, move your filter left and right, finding in which area your problem disappears. Then narrow down the Q to search in this area. And repeat the process. Most likely you will find the problem here. But if you still cut useful information along with the problem, narrow down the Q once again and repeat the process.

Remember, you shouldn't cut nothing useful, only problematic areas.” —[Nathaniel W.](#)

25 August 2023: “Why Ethiopia? Saudi Arabia, Iran, UAE, Argentina, even Egypt - everything is clear. But why Ethiopia and not, say, Algeria?

Because it is a direct appeal to the rest of Africa. Moreover, the appeal is at the level of historical feeling.

What is the Federal Democratic Republic of Ethiopia? It is not only, for a moment, 116 million people. And not only the key role in the organization of the African Union (AU) and its prototype, the Organization of African Unity, which was founded in 1963 in Ethiopia. In this sense, Addis Ababa, where the AU headquarters is located, is in a certain sense an analog of the European Brussels.

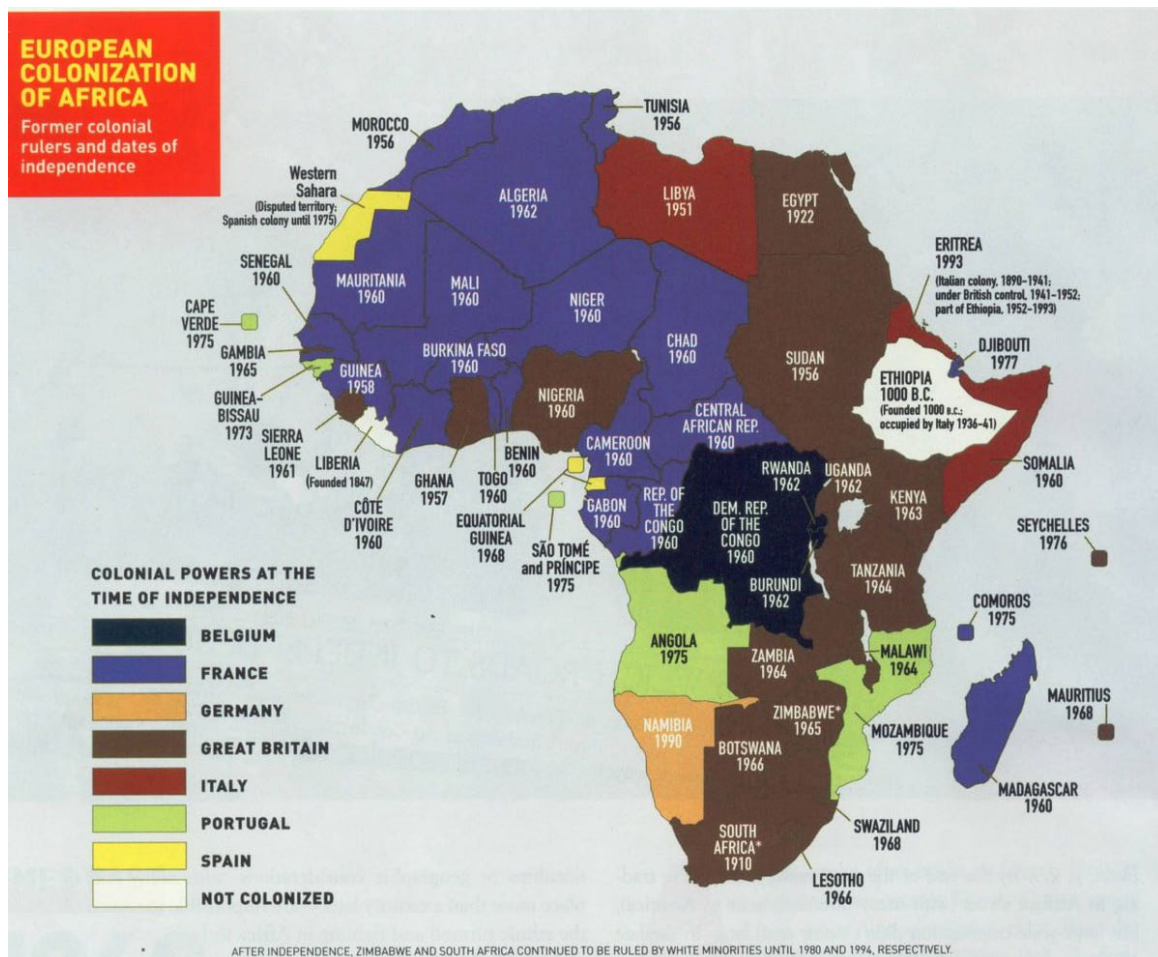

But why is the headquarters located there? This is no accident, right? Right.

One of the most obvious answers is this: Ethiopia is the only country on the African continent that has never been a European colony. Orthodox Ethiopia has always remained sovereign - except for a brief period of Italian occupation from 1936-1941 and the rule of Anglo-American òliberatorsÓ from 1941-44.

As far back as the end of the 19th century, it was Ethiopia that, in fact, stopped the advance of British colonialism in Africa (the Rodd Treaty of 1897). The year before, having defeated another European power - Italy. By the way, already in 1898, Ethiopia became the first country on the continent with which Russia established diplomatic relations.

There simply could not be a louder signal for the entire Black Continent than the admission of Ethiopia to the BRICS.

eviction

from 1948: “The story behind the infamous “4 Children for Sale” photograph in 1948 is heartbreaking.

Lucille Chalifoux, the mother in the photo, was facing eviction from her apartment and, with no other options, made the difficult decision to sell her four children.

The photo captured the attention of the public when it was published in the local newspaper.

Offers of support and job opportunities poured in, but unfortunately, they were not enough to save the children from their challenging fate.

The youngest child, David, was adopted by Harry and Luella McDaniel, who provided him with a stable and safe home.

While his upbringing was strict, he eventually found stability and served in the military for 20 years before working as a truck driver.

However, the older siblings, RaeAnn and Milton, had a much more harrowing experience. They were sold to a couple named John and Ruth Zoeteman, who treated them as property rather than children.

They were chained up in a barn and subjected to physical and emotional abuse. RaeAnn, in particular, had a traumatic upbringing, including an incident of kidnapping, rape, and pregnancy in her teenage years.

Despite their hardships, both RaeAnn and Milton were able to reconnect as adults.

Unfortunately, their sister Lana passed away before they could reunite.

Another sibling, Sue Ellen, was in the late stages of lung disease at the time of the reunion but could express her love for her siblings through written communication.

Sue Ellen’s words for the birth mother that sold them: “She needs to be in hell burning.”” ”

logical fallacies

Fallacies are fake or deceptive arguments, “junk cognition,” that is, arguments that seem irrefutable but prove nothing. Fallacies often seem superficially sound and they far too often retain immense persuasive power even after being clearly exposed as false. Like epidemics, fallacies sometimes “burn through” entire populations, often with the most tragic results, before their power is diminished or lost. Fallacies are not always deliberate, but a good scholar’s purpose is always to identify and unmask fallacies in arguments. Note that many of these definitions overlap, but the goal here is to identify contemporary and classic fallacies as they are used in today’s discourse. Effort has been made to avoid mere word-games (e.g., “The Fallacist’s Fallacy,” or the famous “Crocodile’s Paradox” of classic times), or the so-called “fallacies” of purely formal and symbolic, business and financial, religious or theological logic. No claim is made to “academic rigor” in this listing. [Note, his list of fallacies is in alphabetical order in the main dictionary section.]

Created by Owen M. Williamson and does not necessarily reflect the opinions, positions, policies or procedures of the University of Texas at El Paso. Dedicated to the [Public Domain](#) under Creative Commons.

Fallacies are statements that might sound reasonable or true but are actually flawed or dishonest. When readers detect them, these logical fallacies backfire by making the audience think the writer is (a) unintelligent or (b) deceptive. It is important to avoid them in your own arguments, and it is also important to be able to spot them in others’ arguments so a false line of reasoning won’t fool you. Think of this as intellectual kung-fu: the vital art of intellectual self-defense.

Faraday's Law

“Faraday's Law: This equation describes how a changing magnetic field can induce an electric current. fascism

The word “fascism” was invented by Benito Mussolini. It means the merger of state and corporate power. Mussolini once said, “Fascism should more properly be called corporatism, because both believe in the merger of corporate and government power.”

The Federal Election Campaign Act (FECA) of 1971 was signed into law by then President Richard Nixon on 7 February 1972. It made it legal for corporations to make political campaign donations. Once the Republican and Democratic parties started accepting corporate campaign donations in trade for adopting corporate legislative goals, the US became literally fascist.

“We already live in a structurally fascist country. The legislative and legal underpinnings were put in place by both parties over the last 30 years. The difference between them is the GOP wants you to embrace it and the DNC would like you to pretend it’s not true.” —[@mousedrvr](#)

fatigue

A common cause of fatigue among teenagers is “phase shift”. Phase shift is the result of growth hormones during the teenage years resetting the circadian clock (the inner biological clock) so that the teenager naturally needs to stay up late at night and rise late in the morning.

Schools typically ignore this biological factor, which greatly reduces the effectiveness of education. Rather than dealing with the real biology and enhance the educational process, school administrators raised in the Christian Protestant ethic believe that suffering is somehow good for the soul and demand that teenagers suffer physically and educationally just to satisfy the perverse sadism demanded by Christian beliefs.

Some of the causes of tiredness include: deficiency of [calcium](#) and [zinc](#).

“Signs of [zinc](#) deficiency include growth retardation, hair loss, diarrhea, delayed sexual maturation and impotence, eye and skin lesions, and loss of appetite”, according to [the U.S. National Institutes of Health](#). “There is also evidence that weight loss, delayed healing of wounds, taste abnormalities, and **mental lethargy** can occur. Since many of these symptoms are general and are associated with other medical conditions, do not assume that they are due to zinc deficiency. It is important to consult with a medical doctor about medical symptoms so that appropriate case can be given.”

Leakage (including microleakage) from silicone breast implants can cause fatigue, short-term memory loss, joint and muscle pains, skin rashes, disturbed sleep patterns, depression, and hair loss, according to Dallas surgeon Edward Melmed in his article “Big Breasts, Big Risks” in the Los Angeles Times on January 3, 2007.

Chronic fatigue syndrome is one of the conditions reported by the state of California as grounds for insurance companies to charge unreasonably high premiums or to outright reject providing health insurance, according to a front page article by Lisa Girion in the December 31, 2006, *Los Angeles Times*.

fire (element)

Fire is one of the four Western elements (fire, earth, air, water).

fireworks

“The first ingredient of any firework is the ancient explosive black powder, made by 75% potassium nitrate, 15% charcoal and 10% sulfur. Once lit with a fuse or spark, the sulfur melts first at 112.8°C.

The sulfur flows over the potassium nitrate and charcoal, which then burn. This combustion reaction quickly produces a large amount of energy and gas. In other words, an explosion.

But the colors of the fireworks are determined by the elements used.

There are a number of different elements that, when added to a firework and heated, release different wavelengths of light that appear as different colors:

- Strontium makes red.

- Calcium produces orange.
- Sodium releases a yellow color.
- Barium burns green.
- Copper is blue.” —[Massimo](#)

fish

The singular and plural of “fish” is “fish”.

When more than one species of fish is involved, then the plural becomes “fishes”.

fishing

My grandfather on my father’s side loved would go down to the dock after dinner (he lived on a river) and fish. One day I asked if I could go fishing with him. My grandmother said “no”, because that was something he did alone, but my grandfather said I could go if I could stay quiet the whole time.

We both carried a fishing pole down to the dock and stuck a worm on the end and started fishing. After one time asking a question, I stayed quiet. My granddad said we had to stay quiet or we would scare the fish away. We didn’t catch any fish.

After an hour, we returned to his house. On the way back I noted that he never actually caught any fish. He told ne that going down to the dock to fish was the only time he could be alone in his thoughts. At work he was surrounded by other people and at home he was with his wife. At the dock he had an hour to himself and his own thoughts.

F. Scott Fitzgerald

“Let me tell you about the very rich. They are different from you and me. They possess and enjoy early, and it does something to them, makes them soft where we are hard, and cynical where we are trustful, in a way that, unless you were born rich, it is very difficult to understand. They think, deep in their hearts, that they are better than we are because we had to discover the compensations and refuges of life for ourselves. Even when they enter deep into our world or sink below us, they still think that they are better than we are. They are different.” —F. Scott Fitzgerald

The flamingo’s famous pose, standing on one leg, with their head resting on their body and their other leg tucked under the abdomen, actually cuts heat loss through the legs and feet. The pictured flamingos reside at the Bermuda Aquarium, Museum & Zoo (BAMZ), which is owned and operated by the Bermuda Government. appeal to force

Appeal to Force: (*Argumentum ad Baculum*, or the “Might-Makes-Right” Fallacy): This argument uses force, the threat of force, or some other unpleasant backlash to make the audience accept a conclusion. It commonly appears as a last resort when evidence or rational arguments fail to convince. Logically, this consideration has nothing to do with the merits of the points under consideration. Example: “Superintendent, it would be a good idea for your school to cut the budget by \$16,000. I need not remind you that past school boards have fired superintendents who cannot keep down costs.” While intimidation might force the superintendent to conform, it does not convince him that the choice to cut the budget was the most beneficial for the school or community. Lobbyists use this method when they remind legislators that they represent so many

thousand votes in the legislators' constituencies and threaten to throw them out of office.

fun

“Fun” is a subjective experience that refers to the enjoyment, pleasure, or amusement derived from an activity or event. It is often associated with positive emotions, such as happiness, excitement, and satisfaction. Fun can be experienced in various ways, such as through play, hobbies, social interactions, or entertainment. What is considered fun may vary from person to person, as individual preferences, interests, and cultural backgrounds play a significant role in determining what one finds enjoyable or entertaining. [ChatGPT]

the most fun activity

Some popular fun activities include:

1. Traveling and exploring new places
2. Engaging in sports or physical activities, such as hiking, swimming, or playing team sports
3. Attending concerts, festivals, or live performances
4. Pursuing hobbies like painting, cooking, or photography
5. Playing video games or board games with friends and family
6. Participating in social events and gatherings

Ultimately, the most fun activity for you will depend on your personal interests and what brings you joy and satisfaction. [ChatGPT]

the most fun game

It is difficult to determine the “most fun” game, as people have different preferences and enjoy different types of games. What is considered fun can vary greatly based on individual tastes, cultural backgrounds, and personal experiences. Some may enjoy board games, while others might prefer video games, sports, or puzzle games.

Popular games that many people find enjoyable include classics like Monopoly, Scrabble, and Chess, as well as video games like *The Legend of Zelda: Breath of the Wild*, *The Witcher 3: Wild Hunt*, and *Minecraft*. In recent years, games like *Among Us* (inspired by *Mafia*, a party-style game and the science fiction movie *The Thing*) and *Fall Guys* have gained widespread popularity for their fun, engaging, and social gameplay.

Ultimately, the most fun game for you will depend on your personal interests and preferences. It's a good idea to try different types of games to discover which ones you enjoy the most. [ChatGPT]

Grapes of Wrath

Chapter 25 of John Steinbeck's *Grapes of Wrath*:

THE SPRING IS BEAUTIFUL in California. Valleys in which the fruit blossoms are fragrant pink and white waters in a shallow sea. Then the first tendrils of the grapes swelling from the old gnarled vines, cascade down to cover the trunks. The full green hills are round and soft as breasts. And on the level vegetable lands are the mile-long rows of pale green lettuce and the spindly little cauliflowers, the gray-green unearthly artichoke plants

And then the leaves break out on the trees, and the petals drop from the fruit trees and carpet the earth with pink and white. The centers of the blossoms swell and grow and color: cherries and apples, peaches and pears, figs which close the flower in the fruit. All California quickens with produce, and the fruit grows heavy, and the limbs bend gradually under the fruit so that little crutches must be placed under them to support the weight.

Behind the fruitfulness are men of understanding and knowledge, and skill, men who experiment with seed, endlessly developing the techniques for greater crops of plants whose roots will resist the million enemies of the earth: the molds, the insects, the rusts, the blights. These men work carefully and endlessly to perfect the seed, the roots. And there are the men of chemistry who spray the trees against pests, who sulphur the grapes, who cut out disease and rots, mildews and sicknesses. Doctors of preventive medicine, men at the borders who look for fruit flies, for Japanese beetle, men who quarantine the sick trees and root them out and burn them, men of knowledge. The men who graft the young trees, the little vines, are the cleverest of all, for theirs is a surgeon's job, as tender and delicate; and these men must have surgeons' hands and surgeons' hearts to slit the bark, to place the grafts, to bind the wounds and cover them from

the air. These are great men.

Along the rows, the cultivators move, tearing the spring grass and turning it under to make a fertile earth, breaking the ground to hold the water up near the surface, ridging the ground in little pools for the irrigation, destroying the weed roots that may drink the water away from the trees.

And all the time the fruit swells and the flowers break out in long clusters on the vines. And in the growing year the warmth grows and the leaves turn dark green. The prunes lengthen like little green bird's eggs, and the limbs sag down against the crutches under the weight. And the hard little pears take shape, and the beginning of the fuzz comes out on the peaches. Grape blossoms shed their tiny petals and the hard little beads become green buttons, and the buttons grow heavy. The men who work in the fields, the owners of the little orchards, watch and calculate. The year is heavy with produce. And the men are proud, for of their knowledge they can make the year heavy. They have transformed the world with their knowledge. The short, lean wheat has been made big and productive. Little sour apples have grown large and sweet, and that old grape that grew among the trees and fed the birds its tiny fruit has mothered a thousand varieties, red and black, green and pale pink, purple and yellow; and each variety with its own flavor. The men who work in the experimental farms have made new fruits: nectarines and forty kinds of plums, walnuts with paper shells. And always they work, selecting, grafting, changing, driving themselves, driving the earth to produce.

And first the cherries ripen. Cent and a half a pound. Hell, we can't pick 'em for that. Black cherries and red cherries, full and sweet, and the birds eat half of each cherry and the yellowjackets buzz into the holes the birds made. And on the ground the seeds drop and dry with black shreds hanging from them.

The purple prunes soften and sweeten. My God, we can't pick them and dry and sulphur them. We can't pay wages, no matter what wages. And the purple prunes carpet the ground. And first the skins wrinkle a little and swarms of flies come to feast, and the valley is filled with the odor of sweet decay. The meat turns dark and the crop shrivels on the ground.

And the pears grow yellow and soft. Five dollars a ton. Five dollars for forty fifty-pound boxes; trees pruned and sprayed, orchards cultivated—pick the fruit, put it in boxes, load the trucks, deliver the fruit to the cannery—forty boxes for five dollars. We can't do it. And the yellow fruit falls heavily to the ground and splashes on the ground. The yellowjackets dig into the soft meat, and there is a smell of ferment and rot.

Then the grapes—we can't make good wine. People can't buy good wine. Rip the grapes from the vines, good grapes, rotten grapes, wasp-stung grapes. Press stems, press dirt and rot.

But there's mildew and formic acid in the vats.

Add sulphur and tannic acid.

The smell from the ferment is not the rich odor of wine, but the smell of decay and chemicals.

Oh, well. It has alcohol in it, anyway. They can get drunk.

The little farmers watched debt creep up on them like the tide. They sprayed the trees and sold no crop, they pruned and grafted and could not pick the crop. And the men of knowledge have worked, have considered, and the fruit is rotting on the ground, and the decaying mash in the wine vat is poisoning the air. And taste the wine—no grape flavor at all, just sulphur and tannic acid and alcohol.

This little orchard will be a part of a great holding next year, for the debt will have choked the

owner.

This vineyard will belong to the bank. Only the great owners can survive, for they own the canneries, too. And four pears peeled and cut in half, cooked and canned, still cost fifteen cents. And the canned pears do not spoil. They will last for years.

The decay spreads over the State, and the sweet smell is a great sorrow on the land. Men who can graft the trees and make the seed fertile and big can find no way to let the hungry people eat their produce. Men who have created new fruits in the world cannot create a system whereby their fruits may be eaten. And the failure hangs over the State like a great sorrow.

The works of the roots of the vines, of the trees, must be destroyed to keep up the price, and this is the saddest, bitterest thing of all. Carloads of oranges dumped on the ground. The people came for miles to take the fruit, but this could not be. How would they buy oranges at twenty cents a dozen if they could drive out and pick them up? And men with hoses squirt kerosene on the oranges, and they are angry at the crime, angry at the people who have come to take the fruit. A million people hungry, needing the fruit—and kerosene sprayed over the golden mountains.

And the smell of rot fills the country.

Burn coffee for fuel in the ships. Burn corn to keep warm, it makes a hot fire. Dump potatoes in the rivers and place guards along the banks to keep the hungry people from fishing them out. Slaughter the pigs and bury them, and let the putrescence drip down into the earth.

There is a crime here that goes beyond denunciation. There is a sorrow here that weeping cannot symbolize. There is a failure here that topples all our success. The fertile earth, the straight tree rows, the sturdy trunks, and the ripe fruit. And children dying of pellagra must die because a profit cannot be taken from an orange. And coroners must fill in the certificate—died of malnutrition—because the food must rot, must be forced to rot.

The people come with nets to fish for potatoes in the river, and the guards hold them back; they come in rattling cars to get the dumped oranges, but the kerosene is sprayed. And they stand still and watch the potatoes float by, listen to the screaming pigs being killed in a ditch and covered with quick-lime, watch the mountains of oranges slop down to a putrefying ooze; and in the eyes of the people there is the failure; and in the eyes of the hungry there is a growing wrath. In the souls of the people the grapes of wrath are filling and growing heavy, growing heavy for the vintage.

groove

14 December 2023: “What is groove?

· +1 killer mixing tip for better groove

In music, “groove” refers to the rhythmic feel or pattern created by the interplay of various musical elements, such as timing, dynamics, and accents.

Rhythmic feel is not the same as rhythm. In two different beats, rhythm can be the same, but the accents and sounds can vary. As well as interaction between sounds. This will create a different rhythmic feel, or a different groove.

To create a groove, focus on a solid rhythmic foundation, experiment with dynamics, and pay attention to the interaction between different instruments.

It often involves finding the right balance between repetition and variation to make the music rhythmically engaging.

When you shift your sounds from the grid, it also can help the groove. Because again, rhythmic feel changes, it starts to be alive and unique. Rhythm should engage with the listener.

It also possible to create a certain groove with vocals. When you set the tone by singing or rapping. It is common. Vocals also can interact with instruments to create a certain rhythmic feel.

Many random songs that blew up just have a great groove. And there is no hit song that is not rhythmically great.

And most of the average songs sound boring and not engaging. Rhythm is there, but there is no unique and engaging rhythmic feel.

ÑÑÑÑÑÑ-

One mixing tip how you can create or emphasize the groove in your song:

You can try matching the compressors release time to song bpm

This will make your compressor “dance” in rhythm, and the sound you processed will start “breathing” with a song, coming to life.” —[Nathaniel W.](#)

30 July 2023: "Hillary Clinton's State Department, under Obama, was instrumental in pushing Haiti into a descent of poverty and lawlessness, becoming a nation ruled by gangs and violence. The invasion of Haiti was supposed to happen in her second term, but it's happening in Biden's first.

The the invasion and ensuing occupation will be done under the guise of restoring order and protecting human rights - but it's real purpose is the subjugation and exploitation of the workers

of Haiti by U.S. corporations and establishment “non profits”.

If you didn't know already: we are invading Haiti. Soon. We will be choosing another nation to “lead” the occupation force, but it is U.S. sponsored all the way.

And if you want to know how the exploitation is going to play out, just look at what the Clintons did in Haiti after the earthquake (links for all points below).

So much for the “rules-based order”.

hard water

In scientific terms, water hardness is generally the amount of dissolved calcium and magnesium in water. But in layman's terms, you may notice water hardness when your hands still feel slimy after washing with soap and water, or when your drinking glasses at home become less than crystal clear. —[U.S. Geological Survey](#)

The simple definition of water hardness is the amount of dissolved calcium and magnesium in the water. Hard water is high in dissolved minerals, largely calcium and magnesium. You may have felt the effects of hard water, literally, the last time you washed your hands. Depending on the hardness of your water, after using soap to wash you may have felt like there was a film of residue left on your hands. In hard water, soap reacts with the calcium (which is relatively high in hard water) to form “soap scum”. When using hard water, more soap or detergent is needed to get things clean, be it your hands, hair, or your laundry. —[U.S. Geological Survey](#)

Have you done a load of dishes in the dishwasher, taken out the glasses, and noticed spots or film on them? This is more hard-water residue—not dangerous, but unsightly. Many industrial and domestic water users are concerned about the hardness of their water. When hard water is heated, such as in a home water heater, solid deposits of calcium carbonate can form. This scale can reduce the life of equipment, raise the costs of heating the water, lower the efficiency of electric water heaters, and clog pipes. And, yes, mineral buildup will occur in your home coffee maker too, which is why some people occasionally run vinegar (an acid) through the pot. The acidity of vinegar helps to dissolve mineral particles by making them charged. These newly charged particles become attracted to the positive and negative charges in water and can be washed away easily. —[U.S. Geological Survey](#)

But hard water can have some benefits, too. Humans need minerals to stay healthy, and the World Health Organization (WHO) states that drinking-water may be a contributor of calcium and magnesium in the diet and could be important for those who are marginal for calcium and magnesium intake. —[U.S. Geological Survey](#)

James Hemings

“James Hemings, brother to Sally Hemings was the first American to train as a chef in France. He was enslaved by Thomas Jefferson at 8.

The Chef de cuisine is the reason macaroni and cheese made it to America. Ê

James Hemings was born in 1765 into slavery and lived much of his life enslaved. He was among the many enslaved people who came into Thomas Jefferson's possession through his wife's inheritance.

In May 1784, Hemings received a summons to join Jefferson in Philadelphia. From there they travelled to Paris where he was trained in the art of French cooking. At a time when illiteracy was imposed on all African people, he was not only literate but fluent in English and French.

James went on to make culinary history. He ran the kitchens of Jefferson's residence on the Champs-Élysées, overseeing meals served to the notables of Europe. This made him the first American chef to be head cook at an American embassy.

Macaroni & cheese, vanilla ice cream, French fries, crème brûlée, meringues, and many other foods were introduced by Hemings, though Jefferson got the credit.

James continued his legacy and became one of the nation's most influential culinary instructors. His transfer of knowledge impacted Black cooks, caterers, and chefs who were instrumental in developing American dining.

Hemings life was cut tragically short in 1801 through suicide at 36; a letter addressed to Jefferson said that the cause was “drinking too freely.” Ultimately he left an important legacy in

culinary history. He helped to create and define American Cuisine as we know it today!”

Hitler

27 October 1928 (Hitler's Nazism was Christian and anti-socialist): "Everywhere you look today you can see the longing for a new idea. The destiny of Germany, not the individual destiny, must be decisive for these. All Marxist errors must be overcome. Successful economic policy requires power politics. To do this, Germany needs a new courageous attitude. Only the thought of the leader personality can save Germany. The question of the form of government is not up for discussion; it is necessary that the principles of the state correspond to moral feeling. This works in the unselfishness of the movement: the individual gets nothing for his sacrifices, but the future gets life!

Through the limitless sense of sacrifice that already enthalls millions today, a sense of sacrifice that also reaches beyond the borders of the country. She has already driven a symbol beyond the marked German borders. It is the national color of the coming new generation. The bourgeoisie like it. Parties look beyond the border posts, the new Germany already sees the new form in front of it, which consistently overlooks this junk, a form that will create the prerequisites that are necessary on the outside. For us, Parliament is a fencing ground on which our world view is represented. In particular, we do not believe that Parliament will save Germany, that a German National Assembly could do that, rather that the idea of a leader can one day save Germany! This movement has received an extraordinary degree of freedom of operation, which in the highest sense of the word allows everything to be put aside that could in any way divide the people.

We have different faiths in Germany, but we are one: which faith conquers the other, that is not the question, rather whether Christianity stands or falls, that is the question! Today we see before us the inheritance of the people, touching everything. There is no then into which any piece of his heaven is pointed. We will never allow a religious quarrel to arise in this movement, we say rather: the church may educate the parties to religious service, we educate them to fight and to preserve its world view and its foundations! We are convinced that when Christ descends on earth today, that he will not refuse blessings to those who strive to put Christianity into practice, to remove mutual self-help, class struggle, and status arrogance, we will strive, strive to make it clear to everyone that it's a shame not wanting to see the need after we're trying to suppress German culture being dragged down. **We do not tolerate anyone in our ranks who offends the ideas of Christianity, who stands up to a dissident, fights him, or provokes himself as a hereditary enemy of Christianity. This movement of ours is actually Christian.**

We are filled with the wish that Catholics and Protestants may find one another in the deep need of our own people. We will stop any attempt to bring religious thought up for discussion in any way within our movement. And when we fight the Center [Party], we don't do it for religious reasons, but because it makes fun of the word "Christianity" and scorns it because it is willing to

throw Christianity overboard for the ministerial chair. We are fighting the Center for national political reasons, not because it wants to be a Catholic party. Beware of those who walk in sheep's clothing! We reserve the right not to degrade Christianity to political service.” —Adolf Hitler 27 October 1928 at Passau

30 September 2023: “Existing law, which outrages Newsom, is government can jail people for being on the street, but only if there’s available shelter such that people are choosing to be on street instead of shelter. 30 September 2023: “Third, Newsom quietly did something remarkable. He created an entire new court bureaucracy in California, marketed with the acronym CARE, that seeks to dramatically expand the power and capacity of courts to coerce treatment of mentally ill people.” —[Alec Karakatsanis](#)

7 September 2023: “THREAD. California politicians are about to complete an epic charade. The Governor is about to sign into law a massive new bureaucracy called “CARE Court,” which stands for Community Assistance, Recovery and Empowerment Court. It’s a story not getting enough attention.

I’m writing about CARE Court for two reasons: 1) It illustrates how bureaucrats craft “reforms” that make the structural problems of our society worse; 2) CA politicians co-opted the language of “care” in service of an unprecedented expansion of state control and repression.

Remember: Status quo elites and people who own things win every time public is told structural problems of inequality (like housing) can be solved not by confronting the things leading to inequality, but by regulating that inequality with more layers of state power and control.

So, what is CARE Court? For background, read the basics about why it is so alarming in this Human Rights Watch analysis. In short, the plan creates an entirely new coercive court system in every county in California at significant cost to taxpayers.

Court gets power to coerce “treatment,” targeting people with mental illness and unhoused. All backed threat of conservatorship (people lose power to make decisions over their lives/bodies), and the power of government to use violence to enforce court orders.

The law itself does not ensure or provide ****any new housing or treatment capacity**** for a system that is already in a crisis of scarcity. The new bureaucracy operates entirely separately from any investment or initiatives in the actual care that would be provided to people.

You also have to understand that the push for CARE Court by Governor Newsom is coming against the backdrop of four larger phenomena:

1. A historic increase in inequality and shortage of affordable housing in California that causes widespread homelessness and housing insecurity;
2. A pervasive lack of sufficient treatment, either with respect to trained personnel or the physical infrastructure required to care for people’s medical problems;
3. A growing criminalization of poverty and mental illness, seen most recently in the wave of California cities criminalizing sitting, lying, or sleeping in public.
4. Elite political and upper class circles in California have been buzzing about the “disorder” on California’s streets. The sense of urgency to “do something” or to *appear to be*

doing something about homelessness and mental illness has become a sort of obsession among people who see themselves as members of the political elite in California. This groupthink likely explains why Newsom's plan passed the Senate 38-0 and the Assembly 62-2.

CARE Court won't solve homelessness or mental illness, it makes things worse. The bill is widely opposed by civil rights, human rights, mental health, medical, homelessness, and disability advocacy organizations. Experts agree that coerced treatment is terrible policy:

1. Forcing people to obtain "treatment" against their will is not an effective medical intervention.

2. Even the most coercive bureaucracy in the world will not solve a basic problem of math: California has not committed to doing anywhere what it takes to provide the supportive housing and mental health infrastructure to make a dent in the problem.

3. By diverting enormous sums of money and personnel into creating an entirely new government bureaucracy full of judges, court personnel, liaisons to other existing bureaucracies, consultants, county government lawyers, public defenders, etc... the CARE Court diverts enormous sums of money away from the investments that are needed and creates an additional layer that actually makes it harder for people to get what they need. (Anyone unfamiliar with the woeful inefficiency of California's various existing court bureaucracies should read *The Trial* by Franz Kafka and then imagine something even larger and more ineffective at solving social problems).

The Plan will hurt Californians in need of housing who do not suffer from mental illness by requiring counties to prioritize CARE Court participants for services and placement but not actually increasing the number of available places to live or the accessibility of services. So the bill will actually exacerbate the problems faced by other populations of people who are housing insecure or in need of treatment.

So, what's really going on? Well, an unprecedented movement has come together in California and across in U.S. to replace bureaucracies of control with investments in care. A big problem? Elites don't actually want to create more affordable housing or universal health care.

In my view, this language of investments in the things people need to flourish and a focus on helping community-based delivery of those things, is threatening both to existing bloated bureaucracies (like courts, police, prosecutors, prisons, probation, parole, etc.) but also to powerful interests who depend on certain features of housing and health care systems to make profits. Investments in care are popular among ordinary people and are backed by scientific consensus that those investments promote safety far more than police/prisons/courts.

I believe that this narrative/policy threat from people who are building alternative systems of "care" is a significant factor in the development/marketing of CARE Court by politicians, bureaucrats, and profiteers who profit from systems of isolation, punishment, and extraction.

There may not be a home for you to live in, but there's now a judge who can order you to live in it. And in liberal fashion, CA will provide, with tax \$\$\$, a lawyer to represent you in a court battle over whether to force you to get treatment from a provider who doesn't exist.

This represents another prominent example of a ruling political class that is incapable of actually addressing the structural problems of our society, particularly the lack of affordable housing, the lack of universal access to medical care, and growing inequality.

So, unwilling to do things that would be required to solve the problem, but threatened by a

popular narrative from grassroots movements about the need to provide people the things they need to survive, the political elite turn to a marketing mirage: their own rhetoric of “care.”

The goal? Make what they say hard to distinguish from what people actually interested in “care” want. It’s mass obfuscation that traps us in an endless PR loop designed to trick people into thinking that those in power are well-meaning and working on the big problems of society.

All of this carries with it the same dangers that I wrote about with virtually every recent “criminal justice reform” in my book *Usual Cruelty*.

These reforms are designed to take away energy from radical changes by convincing well meaning but low-information voters who care about holistic well-being to support changes that do nothing to fix problems precisely because they preserve underlying root causes of the problems.

And this is how you should see their rhetoric. They claim the law is about “preserving self-determination” and “self-sufficiency,” and “empowering.” The very title is chosen so that everyone who hears about it on TV or in the paper immediately thinks about the concept of “care.”

And it works. Here’s how the *San Diego Union Tribune* and *SF Chronicle* naively described the impetus behind the law, essentially reprinting claims from the Governor that the legislation is about “helping” the state’s most vulnerable people.

Only a profoundly lost government would unanimously pass a bill targeting homelessness that doesn’t provide any homes.

Only a concerted propaganda effort can portray coerced government intervention opposed as ineffective and inhumane by the actual experts who devote their lives to working on these issues as *Compassion*.

Only the most cynical political elite would portray a court bureaucracy using threats of eventual violence to force involuntary treatment as ‘preserving self-determination.’ ” —[Alec Karakatsanis](#)

FULL TRANSCRIPT:

Citizens of Israel,

Today, we mark 100 days of the war, 100 days since the terrible day on which our citizens were massacred and taken hostage.

We are continuing the war until the end Ð until total victory, until we achieve all of our goals: Eliminating Hamas, returning all of our hostages and ensuring that Gaza will never again constitute a threat to Israel.

We will restore security to both the south and the north. Nobody will stop us Ð not The Hague, not the axis of evil and not anybody else.

The hypocritical onslaught at The Hague against the state of the Jews that arose from the ashes of the Holocaust, at the behest of those who came to perpetrate another Holocaust against the Jews Ð is a moral low point in the history of nations.

In the murder tunnels of Gaza, our forces have found copies of Hitler’s Mein Kampf. In a home in Gaza, they found a child’s tablet with a picture of Hitler as the screensaver.

Not for nothing did German Chancellor Scholz, after viewing the atrocities of the October 7 massacre, say: ‘Hamas are the new Nazis.’

Yesterday, I spoke with Chancellor Scholz and I thanked him for Germany’s willingness to send a delegation to The Hague to help refute this despicable lie.

But see the depth of the absurdity and the hypocrisy: Supporters of the new Nazis dare to accuse us of genocide. Who do they support? Murderers, rapists, those who decapitate and those who burn babies?!

What brazen gall. What a disgrace.

The State of Israel, the IDF and our security services are fighting a moral and just war that is without parallel, against the Hamas monsters, the new Nazis.

This international campaign of denigration will not weaken either our hand or our determination to fight until the end, because something has changed in the history of our people.

The antisemitism is the same antisemitism but the status of the Jewish people has

fundamentally changed. Today we have a state. We have defense forces and heroic soldiers to protect our people. What happened on October 7 will not happen again. This is our mission. Our obligation.

Tomorrow we will submit a budget that will ensure the continuation of the war: More money and a lot more for security. More compensation and grants for reservists, families, the self-employed and for all who are bearing the burden.

More assistance to return evacuees to their homes and for rebuilding the communities and the kibbutzim.

We are on the path to victory. We will not stop until we achieve victory. We are doing this together to the end. I believe in our people, in our soldiers and commanders, and I believe that after the massacre of Oct. 7, we will not compromise on anything less than total victory.

I say this, on your behalf, to every world leader who I speak with and we will not compromise and we will not stop. We are continuing until victory; we have no other choice.

In recent weeks, we have proven to Hamas and Hezbollah that every terrorist is a dead man, wherever they are. We are continuing to eliminate many terrorists and we are doing so in two ways:

In forceful military activity in which most Hamas battalions have been eliminated and clearing actions to eliminate additional terrorists left in the field, above and below ground. These actions take time.

Several days ago, I met with Secretary of State Blinken. I thanked him for the American assistance and I emphasized to him: We embarked on this war after we were massacred. We are not stopping. We are continuing until we eliminate Hamas and return our hostages.

I told him something else: This is not just our war and it is also your war. This is the war of the sons of light against the sons of darkness.

This is a war against the axis of evil led by Iran and its three proxies: Hezbollah, Hamas and the Houthis.

And I added and I do not forget, not even for a moment, that in addition to the war in Gaza, in addition to the return of our hostages and the return of the residents to their homes in both the north and the south, we have another, constant, existential mission and To prevent Iran from attaining nuclear weapons. This is my mission. This is our mission. I told Secretary of State Blinken: 'This needs to be your highest mission too.'

I embrace the families of the hostages, with whom I and my wife meet all the time. These are personal, heart-rending meetings. We embrace them and listen to them.

We look at the photos of their loved ones and our loved ones. I gave them a clear promise and I repeat it today: I will not give up on anyone. We are obligated to returning them all home.

I embrace the wounded who have shown utmost heroism in the face of their war injuries. Every one of our fighters and commanders are true heroes who have given their souls to restore security to our country and return the residents to their homes and so it will be.

argumentum ad hominem

Argumentum Ad Hominem (Literally, “Argument to the Man.” Also called “Poisoning the Well” and “Personal Attack”): Attacking or praising the people who make an argument rather than discussing the argument itself. This practice is fallacious because the personal character of an individual is logically irrelevant to the truth or falseness of the argument itself. The statement “ $2+2=4$ ” is true regardless if is stated by a criminal, congressman, or a pastor. There are two subcategories:

(Abusive): To argue that proposals, assertions, or arguments must be false or dangerous because they originate with atheists, Christians, Muslims, Communists, the John Birch Society, Catholics, anti-Catholics, racists, anti-racists, feminists, misogynists (or any other group) is fallacious. This persuasion comes from irrational psychological transference rather than from an appeal to evidence or logic concerning the issue at hand. This is similar to the genetic fallacy.

(Circumstantial): To argue that opponents should accept or refute an argument only because of circumstances in their lives is a fallacy. If one’s adversary is a clergyman, suggesting that he should accept a particular argument because not to do so would be incompatible with the scriptures is a circumstantial fallacy. To argue that, because the reader is a Republican, he must vote for a specific measure is likewise a circumstantial fallacy. The opponent’s special circumstances do not affect the truth or untruth of a specific contention. The speaker or writer must find additional evidence beyond that to make a strong case.

human chain

6 December 2023: “This is just a short stretch of the Baltic Way.

On 23 August 1989, approximately two million people joined their hands to form a human chain spanning 690 km (430Êmi) across the three Baltic states of Estonia, Latvia and Lithuania as a peaceful demonstration against Soviet oppression, and to support the independence movements of the three States and their desire to escape communism.

This protest was one of the earliest and longest unbroken human chains in history. Similar human chains were later organised in many East European countries and regions of the USSR.”

Indian Child Welfare Act

On Thursday, 15 June 2023, the US Supreme Court upheld the Indian Child Welfare Act (ICWA) 7-2 in the case [21-376 Haaland v. Brackeen](#).

Neil Gorsuch wrote in his concurring opinion: “Often, Native American Tribes have come to this court seeking justice only to leave with bowed heads and empty hands. But that is not because this Court has no justice to offer them. Our Constitution reserves for the Tribes to offer them. Our Constitution reserves for the Tribes a place—an enduring place—in the structure of

American life. **It promises them sovereignty for as long as the wish to keep it.** And it secures that promise by divesting States of authority over Indian affairs and by giving the federal government certain significant (but limited and enumerated) powers aimed at building a lasting peace. In adopting the Indian Child Welfare Act, Congress exercised that lawful authority to secure the right of Indian parents to raise their families as they please; the right of Indian children to grow in their culture; and the right of Indian communities to resist fading into the twilight of history. All of that is in keeping with the Constitution's original design."

"ICWA needs to be celebrated and we, Indigenous Peoples, need to face the fact that we need to reform enrollment so that our unenrolled family members have the same protections as the currently enrolled." —[Ol' Dirty Rez Dog](#)

Neil Gorsuch wrote in his concurring opinion: "The Indian Child Welfare Act did not emerge from a vacuum. It came as a direct response to the mass removal of Indian children from their families during the 1950s, 1960s, and 1970s by state officials and private parties. That practice, in turn, was only the latest iteration of a much older policy of removing Indian children from their families—one initially spearheaded by federal officials with the aid of their state counterparts nearly 150 years ago. In all its many forms, the dissolution of the Indian family has had devastating effects on children and parents alike. It has also presented an existential threat to the continued vitality of Tribes—something many federal and state officials over the years saw as a feature, not as a flaw. This is the story of ICWA. And with this story, it pays to start at the beginning."

During World War II, President Franklin D Roosevelt (FDR) ordered that all 120,000 Americans of Japanese ancestry be rounded up and forcibly placed in internment camps. Most were American citizens. half were children.

In an interview released 15 June 2023 by *Radio Free Europe/Radio Liberty* (run by the Biden administration) Czech President Petr Pvel said that Russians living in Western nations should be monitored in the same way as people of Japanese descent were in the US during World War II.

“All Russians living in Western countries should be monitored much more than in the past because they are citizens of a nation that leads an aggressive war. I can be sorry for these people, but at the same time when we look back, when the Second World War started, all the Japanese population living in the United States were under a strict monitoring regime as well. That’s simply a cost of war.”

When asked what he meant by the term “monitored”, Pavel said, “under the scrutiny of the security services.”

Ukrainian President Volodymyr Zelensky has also called for Western nations to ban Russian travelers, because the “whole population” of Russia was responsible for the war.

13 January 2024: “Biden to Iran:
“The US is preparing for war with Yemen”

Reuters wrote today that the President of the United States sent a special message to Iran about the attacks of the Houthis and assured Iran that the United States is fully prepared for war with Yemen.

Today, the US carried out airstrikes on Yemen and the airport in Sana’a for the 3rd time. Damage was minimal because the Houthis had already evacuated and hidden all military equipment and army. And yesterday they again attacked ships connected to Israel without a problem.

Biden quickly learned the lesson that an airstrike against Yemen accomplishes absolutely nothing, it is total nonsense, and all it has accomplished is to completely close the Suez Canal to commercial shipping.

British Defense Minister also sent an empty threats to Iran: Our patience is running out.

The *Telegraph* wrote that British aircraft carriers would not join the war because of a “crisis among military personnel”, probably because the British did not want to go to war in the name of genocidal Israel.

The Houthi forces today released videos of large-scale exercises that prepared them for a war against the United States and Israel.

Major General Mohammad Nasser al-Atafi announced:

“Yemen is ready to deter and respond, and we have the advantage in the Red Sea and Gulf of Aden. As long as the war against our brothers in Gaza continues, we will have many surprises.”

British Independent wrote that all Gulf countries allowed Britain and America to use their

airspace to attack Yemen, except the Sultanate of Oman.

This means that Qatar, the UAE and Saudi Arabia are officially joining the US coalition in the war with Yemen. Aramco will probably be targeted, and US and UK due to the jump in the price of oil, will bring Europe even more into a big financial crisis.” —[Megatron](#)

Joke’s on you. Now we can say with certainty, federal law enforcement WAS there IN FORCE ... just not to perform the task you’d have had them perform.

THEY -- as law enforcement ALWAYS does during a mass protest --- were largely the ones INCITING the rioting and violence.

People who call January 6th a “coup attempt” or “an insurrection” are some of the most politically naive and insufferably brainwashed people in America today.

20 September 2023: “Did you know this?

Billy Joel never sells tickets to the front rows of his concerts.

Aside from wanting to beat the scalpers, he got tired of all the bored rich people staring up at him.

“They don’t stand up, make noise, [they just] sit there,” he said.

So now, he sends his road crew out to bring down the fans from the worst seats so they’ll be “people in the front row that are really happy to be there, real fans.”

Although it’s only a small gesture, those people at the front enjoy an experience money can’t buy. Their joy spreads to create a vibrant atmosphere which fills the air and gets into the bloodstream of everybody else in the building.

More artists need to take a leaf out of Billy Joel’s playbook.” —[Call to Activism](#)

kigurumi

A Japanese term for a costumed character. 着ぐるみ

The most common type is wearing pajama-like animal costumes.

Animegao kigurumi is a type of costumed character and cosplay with an anime mask.

By wearing a body suit and mask, kigurumi cosplayers are able to closer resemble the characters with high accuracy, especially in the case of anime, anthro, or otherwise highly stylised characters. In kigurumi, the performers wear a plastic mask that was created by either molding or 3D printing and a matching flesh-coloured body suit (a zentai suit known as a hadatai). The body suit allows them less-detailed skin features, on the level of animated characters, and the mask allows a similar level of facial features.—[Wikipedia](#)

Former Student Non-Violent Coordinating Committee Chairman Stokely Carmichael observed that, in this case, King was taking on not a hapless, wholly unsympathetic villain like Birmingham's Sheriff Eugene "Bull"

Connor, but rather “the entire policy of the United States government.” The consequences were swift and severe: an outraged President Lyndon Johnson cut off all contact with King. And a great number of black Americans—including many old allies and colleagues from the civil rights years—warned that his stance could have devastating consequences for their cause.

King hardly fared better in pursuing his domestic agenda. It was one thing to capture public sympathy nationwide when pitted against the raw hatred and brutality that seemed the peculiar province of whites below the Mason-Dixon Line. It proved quite another to persuade whites outside the South to share their neighborhoods and jobs with blacks, or ~~to support expensive federal~~

Klepetan

“The story of Klepetan, the stork who migrated from South Africa to Croatia every year for 20 years to be with Malena, a female stork who couldn’t fly after being shot by a hunter.

Croatia is a popular nesting spot for white storks; some 1,500 nesting pairs reside in the country, with some villages having more storks than people.

Croatian janitor Stjepan Vokić found Malena while fishing in 1993; she had been shot by hunters and was unable to fly. Vokić rescued Malena and became her caretaker.

In 2001, Vokić started to observe a male stork, which he named Klepetan, visiting Malena. Vokić was surprised when he saw the male stork returning the following year and the year after. Every spring Klepetan came back to mate with Malena.

Through a radio tracking band, it was determined that Klepetan made a 13,000-km (8,000Êmi) month-long journey from South Africa to Croatia to meet up with her partner each year.

Vokić took care of their chicks since Malena was not able to hunt, building them a nest, shelter, and feeding them.

Klepetan returned for the last time in April 2021, because on 7 July 2021, Malena died due to old age and natural causes.” —[Massimo](#)

Final Message

hi. If you're reading this, I've already killed myself. I have given life every opportunity, I have given myself every chance to get better. But I couldn't do it, I wasn't strong enough, I don't think there was a universe where I was ever strong enough to survive this.

Why?

Sometime in the summer, I was contacted by Michael Pocalyko (Cybersecurity guy) through an IRL friend who claimed he was a ÒfixerÓ and wanted to ÒfixÓ the issue that was between me and my parents. I thought this was impossible, I'm transgender and they are strict conservative Muslims, but I decided I would give it a shot because it can't hurt right lmao?

Over the next couple of months, I had called Michael Pocalyko and his associate Ellen, these calls seemed innocuous and honestly pretty helpful. It was mainly questions about my safety and whether I had my needs met at the place I was staying at. Towards the end of my stay at my friends place, I had witnessed a traumatic event and was already in a bad place mentally, Michael took note of this and decided to push me to leave Georgia and move back to Virginia. Michael and Ellen, along with a Saudi lawyer named Bader met me at the train station. I was taken to a hotel and allowed to experience DC, I genuinely was optimistic and believed this could work. God I wish I wasn't so fucking stupid.

At this point, the only person in that group that I was in contact with was Bader, the Saudi lawyer. Bader, throughout this entire time, in his weird way, tried to get me to detransition. First, he pampered me. He got me an apartment temporarily, he took me out to eat, he took me to therapists, but over time, the more conversations I had with him in person, the more I realized what he was trying to do. He tried to get me to be Ònormal.Ó Gave me examples of feminine men and said that they are transgender but they are hiding it, that it's better to hide it. Told me stories personally about people he knew that successfully hid it. Repeated constantly that I can just hold 2 lives, the female me and the male me. Constantly said I looked like a man, always talked down on my appearance. Bought me masculine clothing and tried to throw away ALL of my

feminine clothing. At every step of the way, he tried to detransition me. I had a breakdown over this and bombarded Michael Pocalyko and Ellen with texts about what was happening, they did not respond. I did not realize fast enough what was happening because I'm fucking stupid.

At a certain point, I realized I was entirely dependent on Bader for food and shelter, and that if I ran away, he could easily find my location, and since I was illegal, I would have just been deported to Saudi. I subconsciously gave up, I was too tired. I did everything he asked, I cut my hair, I stopped taking estrogen, I changed my wardrobe, I met my dad. And then I had another breakdown. My mom kept telling me to repent or I was going to hell, and I did, I repented. I believed I was going to hell so much that I read the entire Quran front to back in a couple of days, crying the entire fucking time about what a disgusting thing I am, and I didn't sleep. I repented, and I was broken. Bader then booked a flight back to Saudi, and I came back.

The first month was fine, okay even. I was on edge the entire time, but I was treated like I was going to run at any second by my family, then came the second month. At this point, I was subjected to daily searches of my belongings, my mom searched all of my electronics whenever she got the chance. I was berated for being a freak when my mom found my private photos, my dad called me a failure and an abomination. I was told that Michael, Ellen, and Bader were actually all specifically hired to get me back and that there was no escape from my situation. I was destroyed, but I wanted to keep going.

After the first time they found my HRT, it was traumatizing, but I didn't want to stop. I didn't want to live if I couldn't transition. Then the second time came. After that, I took a month break off of HRT, and got back on it. They have found my HRT again, and I am done fighting.

I wasn't always a good or even decent person, at times I was a fucking asshole, and a disgusting human being. But there were times I feel like I was good. I don't understand why I was given this life with these circumstances, every day hurts, every second stings. I have tried killing myself in the past, but every single time I was still holding on by a thread somewhere deep inside me, I think that's why I survived them. This time, I am done. I am tired.

Message to the people I love.1:

To my friends, to the people I chose to be my family, to my girlfriend, to everyone who has shown me kindness in this life, I sincerely thank you. You made an unbearable existence bearable at times. I am deeply sorry I have disappointed you all, I wish things were different, I wish this message was a message about how I won, how I escaped and built a successful life. How I managed to get FFS, SRS, and beat my dysphoria. I wish I was speaking to you about how proud I am of myself to have done the impossible. But that's not my reality.

I wish this world wasn't so fucking comically cruel, I am actually laughing writing this sentence. It's unironically ridiculous how bad my luck has been the past couple of weeks. Someone just walked past my car and glanced at me, I wonder if they know I'm gonna kill myself. I wonder what they would think about me if they knew who I actually was.

I wanted to be a leader for people like me, but that wasn't written to happen. I hope that the world gets better for us. I hope our people get old. I hope we get to see our kids grow up to fight for us. I hope for trans rights world wide.

Kids Online Safety Act (KOSA)

22 August 2023: “A new bill called the Kids Online Safety Act, or KOSA, is sailing towards passage in the Senate with bipartisan support. Among other things, this bill would give the attorney general of every state, including red states, the right to sue Internet platforms if they allow any content that is deemed harmful to minors. This clause is so vaguely defined that attorneys general can absolutely claim that queer content violates it — and they don’t even need to win these lawsuits in order to prevail. They might not even need to file a lawsuit, in fact. The mere threat of an expensive, grueling legal battle will be enough to make almost every Internet platform begin to scrub anything related to queer people.

The right wing Heritage Foundation [has already stated publicly](#) that the GOP will use this provision to remove any discussions of trans or queer lives from the Internet. They’re salivating over the prospect.

And yep, I did say this bill has bipartisan support. Many Democrats have already signed on as co-sponsors. And President Joe Biden [has urged lawmakers](#) to pass this bill in the strongest possible terms.

Konet Imperial Home Entertainment System

“The perfect Christmas present.

KUBA Corporation manufactured the Komet Imperial Home Entertainment System from 1957 to 1962 in Wolfenbuttel, West Germany.

The Komet was the complete Home Entertainment Center for its time. Opening the door of the lower cabinet revealed the rest of its multi-media features.

The early models usually came with a pull-out, 4-speed Telefunken phonograph on the left, and a television tuner in the center which received both UHF and VHF signals, the Telefunken multi-band radio receiver on the right picked up AM, FM, SW and LW frequencies.

KUBA also released models that featured a storage shelf, commonly used as a small bar or to store vinyl record albums, or for an additional charge, you could order a magneto-phone wire recorder. Wire recorders were the forerunners to reel-to-reel and cassette audio recorders.

The top cabinet or “Sail” had eight speakers; six speakers on the top of the sail and two horn speakers pointing forward located beneath the main console.” —[Massimo](#)

Kung Fu-tze

The Western name, **Confucius**, was invented by Jesuit missionaries roaming China trying to interfere with the religious beliefs of others. Fu-tze means “master” and Kong is the Chinese

family name. in the 16th century. The Romanized version of the name became popular in the Victorian Era. British citizens started questioning the British Empire. The racist claim was that the White Europeans were a superior race and that all other people (exception being the Jews) bore the mark of Ham. The claim was that the Hamites in their “natural state” were incapable of taking care of themselves and that like a parent to children, the British had a social responsibility to rule the world for everyone else’s benefit. Ordinary British people pointed out the examples of Kung Fu-tze, a great Chinese philosopher, and Imhotep, a great African mathematician and scientist. Imhotep was erased from lesson plans and the Romanized name of Confucius was used to make him sound Greek.

Kush

31 December 2023: “Remember, African Kingdom Of Kush was once a global power.

Around 700 BC, two empires ruled the earth: the Assyrian Empire and the Kingdom of Kush. The Kingdom of Kush, also known as the Kingdom of Napata, the Kingdom of Kerma, the Meroitic Kingdom or sometimes called Nubia by some people, was a vast, powerful empire which dominated global affairs such that militarily, politically and economically, it was only rivalled by Assyria. No other power matched these two powers at the period.

Interestingly, at the height of her powers, the kingdom of Kush was ruled by Taharqa, a black African who inherited and consolidated a vast Kushite empire stretching from central Sudan to the Mediterranean, bordering Libya and Palestine: the largest Nile state in ancient times.

Taharqa was so powerful that he named himself “the Lord of the Four Quarters of the World.” Indeed, for some periods, Taharqa was the most powerful ruler, at least of all the ancient African kingdoms.” —[Typical African](#)

In a land where every man’s dream was to pull himself up by his bootstraps, it was clear some boots were made heavier by design. A motley crew of miners, seamstresses, and laborers (who’d

never had the luxury of a silver spoon or even a pewter one) decided they'd had enough of twelve-hour days, measly pay, and the occasional limb lost to machinery.

"Enough's enough!" cried the coal-covered miners.

"We won't be stitched up!" exclaimed the seamstresses, both literally and figuratively.

And so, against the backdrop of smokestacks and bustling streets, the great labor movement unfurled its banners and marched on, like a steamboat against the current, powered by nothing but grit and the hope of a fair wage.

Big Industry, sitting high on its throne of gold coins, scoffed and puffed on its cigars. They hired goons, passed laws, and threw tantrums fit for a king. But the spirit of the workers, like that mischievous Tom Sawyer, just wouldn't stay down.

In the end, after many a tussle, strike, and heartfelt yarn spun 'round campfires, change dawned. The workday shortened, pay got a tad heavier in the pocket, and the children, instead of toiling in factories, took to books and slates. [ChatGPT]

Federal government rates for this week at all three resorts start at an eye-watering \$1,000, company sources revealed

Bungling U.S. government bureaucrats dispatched to the Maui disaster zone are shackled up in \$1,000-a-night luxury hotels on the Hawaiian island, DailyMail.com can reveal.

Officials from the Federal Emergency Management Agency (FEMA) have been slammed by locals over their slow response to the devastating wildfires that have claimed at least 114 lives and left thousands of people homeless after their houses were scorched to the ground.

But that has not stopped the under-fire agency from splashing taxpayer cash to put up more than 1,000 of its personnel at four bank-breaking resorts in Wailea after the deadliest wildfire in the U.S. for more than a century that caused an estimated \$5billion in damage.

The beachside resorts are popular among the rich and famous and located about a 45-minute drive away from the fire-ravaged town of Lahaina.

The posh, five star hotel is a far cry from the shelters and temporary housing where displaced wildfire victims are living after losing their homes in the blaze

FEMA teams have checked in at three five-star hotels, the Fairmont Kea Lani, Four Seasons, and the Grand Wailea Astoria where past guests include members of Hollywood’s elite.

Their rooms carry price tags that are well out of reach of most hard-working Americans.

Federal government rates for this week at all three resorts start at an eye-watering \$1,000, company sources told DailyMail.com.

FEMA’s choice of accommodation for their officials could raise eyebrows given that there are scores of cheaper hotels in the west of the island.

Locals have also fumed over accusations that FEMA has blocked volunteers from delivering aid to the disaster zone.

They blamed U.S. government red tape which means only FEMA-approved supplies can be distributed to those in need.

And Maui’s top emergency official Hernan Andaya resigned suddenly on Thursday citing health problems, just one day after he defended his decision not to sound the island’s alarm system.

Andaya said he did not activate Maui’s 80-alarm, all-hazard outdoor siren system because he feared that residents would confuse the alert for a tsunami warning.” —[Daily Mail](#)

Lavender Scare

25 July 2023: “Republicans today are trying to revive the “Lavender Scare” of the 1950’s. What’s the “Lavender Scare” you ask?

The “Lavender Scare” refers to a period of LGBTQIA discrimination & persecution in the United States during the mid-20th century. It occurred alongside the more well-known “Red Scare” during the 1950s, when there was heightened fear and suspicion of communism.

During the Lavender Scare, government employees suspected of being LGBTQ+ were targeted and fired from their jobs. Homosexuality was considered a security risk and assumed to make individuals susceptible to blackmail, thus leading to their dismissal from federal agencies. It was a time of widespread discrimination and prejudice against LGBTQ+ individuals in the public and private sectors.

“‘That’s the real issue this time,’ he said. ‘Beating Nixon. It’s hard to even guess how much damage those bastards will do if they get in for another four years.’

“The argument was familiar. I had even made it myself, here and there, but I was beginning to sense something very depressing about it. How many more of these goddamn elections are we going to have to write off as lame, but ‘regrettably necessary’ holding actions? And how many more of these stinking double-downer sideshows will we have to go through before we can get ourselves straight enough to put together some kind of national election that will give me and the at least 20 million people I tend to agree with a chance to vote for something, instead of always being faced with that old familiar choice between the lesser of two evils?

“Now with another one of these big bogus showdowns looming down on us, I can already pick up the stench of another bummer. I understand, along with a lot of other people, that the big thing this year is Beating Nixon. But that was also the big thing, as I recall, twelve years ago in 1960 — and as far back as I can tell, we’ve gone from bad to worse to rotten since then, and the outlook is for more of the same.” —Hunter S. 14 September 2023: “YES, NATO CAUSED THE PRESENT DISASTER IN LIBYA

Here's a timeline of what really happened.

In March of 2011, US intelligence claimed there was a popular uprising in Libya and asked the UN to okay a temporary no-fly zone over Libya to protect the citizens.

China, India, Brazil, Germany and Russia, declined to vote for this. China called for peaceful dialogue instead. The Russians warned that the US would unilaterally turn this into one of their regime-change operations.

The US denied they would do such a thing, and said this was only about protecting civilians.

But the Russians turned out to be precisely right—a NATO bombardment was launched that lasted eight months until Gaddafi was killed in late October. As soon as he was dead, NATO ceased fighting: Oct 31.

A US academic study later said that NATO's intervention likely extended the length of the war by up to six months—and amplified to an astonishing degree the damage to the country, which was left in ruins.

I think the most interesting comments at the time came from Italy's leader Silvio Berlusconi. He felt Italy had no choice but to support the NATO attack, but added that he had to tell the truth. “This wasn't a popular uprising,” he said. “Gaddafi was loved by his people.”

Three observations:

First, it is undeniable that the chaos created by NATO's 7,000 bombing raids wrecked Libya and was the direct cause of that community being so badly devastated by the storm that hit it recently.

Second, it is horrific (but not surprising) that the Guardian, CNN, and so many other media are deliberately hiding this truth from their audiences.

And third, we need to notice who actually got it right in 2011: China, India, the Russians, and Brazil.

Yep.

The nascent BRICs, before they were the BRICs.

This should leave no one in any doubt that loss of US hegemony will only be a good thing for the world.

There's something truly horrifying about the world's richest countries destroying an African nation and then, more than a decade later, the world's media hiding the truth in such tragic circumstances.” —[Nury Vittachi](#)

16 September 2023: “Barack Obama Belongs In A Fucking Cage

The Twitter account of America's 44th president just casually shared some links to organizations providing relief to the victims of the terrible flooding in Libya, which as of this writing has already killed thousands of people.

And that would of course be a fine and normal thing for America's 44th president to do — had America's 44th president not personally played a massive role in paving the way to the devastation we're seeing in Libya today.

“If you're looking to help people impacted by the floods in Libya, check out these organizations providing relief,” Obama tweeted.

Uhh, excuse me? Sir? You know you're literally Barack Obama, right?

In 2010 the oil-rich Libya ranked higher on the UN Human Development Index than any other nation in Africa, with much better national infrastructure to protect itself from floods and other natural disasters. Today Libya is a chaotic humanitarian disaster where UN-backed investigators now say literal crimes against humanity have been taking place, including women being forced into sexual slavery.

What changed? If you're reading this, you probably already know what changed.

In 2011, US, French and British forces helped rebels with extensive links to Al Qaeda kill Libya's longtime leader Muammar Gaddafi, which immediately plunged the nation into violence, chaos, extremism and instability which persists to this day. It was later revealed that NATO powers knew they were backing murderous Al Qaeda-linked jihadists at the time.

Falsely branded a “humanitarian intervention” designed to prevent alleged plans for genocide and Viagra-fueled mass rapes against peaceful protesters by Gaddafi's troops, the NATO attack on Libya quickly morphed into a regime change operation which saw Gaddafi brutally lynched in the streets and dying after being stabbed in the anus with a bayonet. Years later in 2016 a UK House of Commons Foreign Affairs Committee found that the narratives used to justify the intervention in Libya were “not supported by the available evidence.”

“We have seen no evidence that the UK Government carried out a proper analysis of the nature of the rebellion in Libya,” the report reads. “UK strategy was founded on erroneous assumptions and an incomplete understanding of the evidence.”

This confirmed concerns voiced by Amnesty International and a UN human rights investigator months before Gaddafi's death that the evidence for the alleged atrocities the intervention was meant to prevent simply wasn't there to be found. Because no policy changes were made after the Iraq invasion and nobody was ever punished for inflicting that horror upon our world, no lessons were learned, and it happened again. The west was deceived into yet another disastrous military intervention, which continues to have severe consequences for people in the region to this day.

In an article published earlier this month in Responsible Statecraft about the crisis in Niger, Branko Marcetic made the interesting observation that the Nigerien junta which ousted the previous government has explicitly stated that the coup was necessary because of the “continuous deterioration of the security situation” which Niger and other countries in the Sahel have been suffering from for over a decade due to “the negative socioeconomic, security, political and humanitarian consequences of NAT’s hazardous adventure in Libya.”

Marcetic also notes that the regime change intervention in Libya was meant to segue into a regime change intervention in Syria by the same means:

“Sens. John McCain (R-Ariz.), Joe Lieberman (I-Conn.), and John Kerry (D-Mass.) all called for a no-fly zone. ‘love the military ... but they always seem to find reasons why you can’t do something rather than why you can,’ complained McCain. The American Enterprise Institute’s Danielle Pletka said it would be ‘an important humanitarian step.’ The now-defunct Foreign Policy Initiative (FPI) think tank gathered a who’s who of neoconservatives to repeatedly urge the same. In a letter to then-President Barack Obama, they quoted back Obama’s Nobel Peace Prize speech in which he argued that ‘inaction tears at our conscience and can lead to more costly intervention later.’

“Then-Secretary of State Hillary Clinton, reportedly instrumental in persuading Obama to act, was herself swayed by similar arguments. Friend and unofficial adviser Sidney Blumenthal assured her that, once Gaddafi fell, ‘limited but targeted military support from the West combined with an identifiable rebellion’ could become a new model for toppling Middle Eastern dictators. Pointing to the similar, deteriorating situation in Syria, Blumenthal claimed that ‘the most important event that could alter the Syrian equation would be the fall of Gaddafi, providing an example of a successful rebellion.’ ”

And that’s exactly what the Obama administration set out to do: pouring weapons into Syria with the goal of effecting regime change, once again on the side of Al Qaeda-linked fighters. Had Russia not intervened in 2015 to prevent Damascus from being toppled, Syria would likely have suffered the same fate as Libya.

So that’s two countries Obama and his cohorts tossed in the incinerator back-to-back, in much the same way the previous administration torched Afghanistan and Iraq. It was done a bit more slyly and subtly than the overt Hulk Smash ground invasions of the Bush era, but the death, suffering and destabilization caused by Obama’s depravity have been just as real.

This is as clear as day, and yet we still get imperial propaganda outlets like *The Washington Post* telling us that “everyone” is to blame for Libya’s current troubles. WaPo has a new article out titled “Libya’s catastrophe is everyone’s fault,” which is a bit like Charles Manson saying the Manson Family killings were everyone’s fault. The article’s author Ishaan Tharoor lays the blame for Libya’s inability to adequately protect its people from the flood on “Libya’s feuding factions and fractured polity” as well as other nations in the region before conceding that NATO’s toppling of Gaddafi would have also played some role.

Another *Washington Post* article titled “How a decade of conflict and division put Libya in peril of disaster” lays zero blame at all on Obama and NATO powers for the nation’s suffering, saying only that Gaddafi was a brutal dictator who “was killed by rebel forces during a NATO-backed Arab Spring uprising.” But it does acknowledge that Libyans are now dying because the nation’s infrastructure has been in a state of decay since 2011:

“The country, with terrain ranging across desert and coastal communities, is highly vulnerable to human-induced climate change. But improvements to and maintenance of basic services and infrastructure, such as the country’s networks of dams, has been deprioritized, said Mary Fitzgerald, a Libya expert at the Middle East Institute, a Washington think tank.

“‘Between 2011 and 2014, there were already concerns about the state of Libyan infrastructure,’ Fitzgerald said. ‘And then Libya went through a six-year civil conflict from 2014 to 2020 and a lot of infrastructure was damaged during that conflict. In the three years since, you have a situation of rival government, which has yet again complicated political dynamics.’”

This nation has been in a continuous state of strife, violence and suffering since the United States spearheaded a NATO campaign to smash it to pieces. And yet you’ll still get empire simps telling you that NATO is a “defensive alliance”, and you’ll still get liberals saying that Obama’s worst scandal was wearing a tan suit one time.

Barack Obama belongs in a fucking cage. His crimes are utterly unforgivable, and if the law existed to punish the world’s worst criminals instead of to protect them he would be rotting in a maximum security prison cell.

It’s all well and good that people are sending Libya aid and that the call to do so is being amplified by influential voices. But the fact that the 44th president of the United States can just come out and pretend to support a nation he personally helped destroy without being called out and excoriated by the mass media shows that we live in a world which is dominated by lies and propaganda.” —[Caitlin Johnstone](#)

lightings stands

11 December 2023: “Equipment tip

Don’t use light monitor stands.

They will vibrate and add muddiness to your sound, acting like a passive speaker.

(Furniture vibrations transform to sound just like speaker vibrations, but imagine the quality of it)

Use stands that are really heavy. Those usually can fit some heavy material inside. Often sand is used.

You can see their rectangle form, which is allowing to fill them with something.

You can make DIY stands from a few pieces of wood and fill it with sand

This will be cheaper and infinitely better than those cheapest “singing” stands.

Hard construction will prevent unnecessary vibrations and keep your sound much more clean.

This is really important as it affects the upper bass - low midrange area, that is crucial to monitor well for achieving a great mix.

Using monitors on the table is a very compromise solution (unless itÖs an additional control). Good stands are much better.” — [Nathaneil W.](#)

limiter

4 December 2023: “Clipper vs Limiter

- What is the difference?
- When used?
- Soft Clipper vs Hard Clipper

A clipper and a limiter are both audio processing tools, but they serve different purposes.

A clipper is designed to intentionally clip or distort the audio signal, adding harmonics and altering the waveform.

❗ It's often used creatively for distortion effects.

A limiter is used to prevent the audio signal from exceeding a specified threshold, controlling the dynamic range and avoiding distortion.

It's commonly used in mastering to ensure that the overall loudness remains consistent without clipping.

Use a clipper for intentional distortion or creative effects, while a limiter is for controlling peaks and maintaining a balanced audio output.

~~~~~

Soft Clipper vs Hard Clipper

☑ A soft clipper introduces gradual distortion, rounding off the waveform peaks, resulting in a smoother sound.

It tends to preserve more of the original tone while adding a subtle edge.

☑ A hard clipper creates a more aggressive, gritty distortion with sharper cutoffs, often

producing a harsher and more noticeable distortion effect, suitable for certain genres or creative audio applications.” —[Nathanael W.](#)

4 December 2023: “In my process limiters are not for maintaining a balanced audio output. That’s what the volume faders and gain stage is for. Limiter is just the cap at the end.” —[prophet](#)

3 January 2024: “Pro mastering tip

Or use first limiter that is faster, second more transparent

20 January 2024: “Fabfilter Pro-L 2

Limiting modes explained:

- Transparent: As the name says, this algorithm is designed to stay true to the original sound and feel as much as possible, avoiding pumping effects and coloring. It works great on most program material, but especially on rock and pop music.

- Punchy: Of all algorithms, this one is the most apparent. When pushed, it becomes quite punchy and will introduce a bit of pumping, which can add some nice flavor. Since it’s fairly ‘safe’, minimizing distortion most of the time, it works miracles on single tracks, like vocals, bass or guitar and can give a nice edge to beat-oriented music.

- Dynamic: By enhancing transients before actually applying limiting, this algorithm excels in preserving the original punch and clarity of your audio. It’s great on rock music, but it can work surprisingly well on other types of audio as well.

- Allround: This algorithm is designed to work well on almost any program material, striking a good balance between loudness and transparency.
- Aggressive: As the name implies, this algorithm uses an aggressive yet smart, near-clipping style of limiting. This works wonders on EDM/trance music but also shines on rock, metal or pop.
- Modern: As the new default style in Pro-L version 2, the Modern algorithm sets the new standard for all-purpose, transparent limiting. It can achieve very high loudness and allows for very near-zero lookahead settings, while still sounding extremely clean and natural.
- Bus: Especially nice for (drum) bus processing and individual tracks, this algorithm is not meant to be transparent, rather the opposite. Think glue, pump or squash.

12 August 2023: “Mali cancels Air France flight permit

Mali has revoked Air France’s permit to fly between Paris and Bamako after the carrier suspended operations to and from the country over regional instability.

The Malian authorities said the suspension breached the terms of its permit to operate the route. In a letter addressed to Air France, the National Civil Aviation Agency said the company had not provided notice and caused “inconvenience to passengers”.

“This failing entails the cancellation of your flight operating permit” for the summer season extending to October and other airlines could use the route, it added.

The agency asked Air France to submit a new flight programme before it could resume the service.” —[DD Geopolitics](#)

29 August 2023: “BREAKING: Under immense pressure to “pack and go,” the UN forces in Mali have hastily withdrawn from the country.

Report:

The United Nations’ peacekeeping mission in Mali has sped up its withdrawal from the city of Ber in the north after a surge in fighting.

The UN mission, known as MINUSMA, said in a statement on Sunday that “deteriorating security” had made its departure urgent. - AJ

SO, according to MINUSMA, the UN forces withdrawal was brought forward (made to happen way earlier than initially scheduled) because security suddenly deteriorated in the Ber region where they were stationed and that put their Blue Helmets (UN soldiers) in danger. That’s what they claim to be the reason they had to leave early and hastily.

Also, Al Jazeera reports that in recent days, the Tuareg-led northern rebel alliance, called the Coordination of Azawad Movements (CMA), accused Malian forces and Russian Wagner Group troops of violating a ceasefire by attacking its forces near Ber. Of course the Malian government has a different account of what happened, saying the terrorist have suddenly gained steam and are attacking their forces, so Wagner and their army had to face them.

Let’s unpack. So, the new Malian administration comes to power and after cancelling the infamous “pact for the continuation of colonization” which colonial France forced its colonies in AFRICA to sign, they immediately asked French soldiers to leave. After that, they looked at the UN forces and realized they and the French soldiers are one and the same, so they ended the UN forces’ nearly ten years mission in their country and asked them to “leave immediately!”

UN mission claimed they were there to assist France in eliminating rebel groups that have made life a living hell in the Sahel country. The military administration in Mali doesn’t think so. The Malian population didn’t share that sentiment at all. Malians claim instead that the presence of these foreign forces have made things worse, even accusing French soldiers of aiding, abetting and arming terrorists and UN of providing cover for terrorists. UN and French soldiers deny these allegations.

When the Malian authority eventually asked the UN to join their French buddies in packing up and leaving the country, it was a hard pill to swallow for the UN. But they had to comply immediately. Malians celebrated this and China welcomed it, saying the west should learn to empower African countries to deal with terrorism and not sending their own forces on African soil to fight terrorism.

But reacting to the development, the US envoy to the UN lashed out at Wagner and Russia saying the UN mission was there to protect Malians from Al Qaeda and Wagner terrorists who terrorized the people and that it was unfortunate Mali was asking them out. France and pretty much all of the west fumed at the development.

Meanwhile, Macron has praised the French Ambassador in Niger who refused to leave the country after he was asked to leave. The so called Ambassador is practically under house arrest but he refuses to leave and Macron calls that “heroic” saying France doesn’t recognize the Tchiani - led regime in Niger. Many wonder what the difference is between Mali and Niger that the French agreed to leave in Mali and Burkina Faso under similar circumstances, but now refuse to leave in Niger.” —[J. C. ## Manhattan Project

2 August 2023: “You won’t see this in the Oppenheimer movie!

Between 1945 and 1947, 18 people were injected with plutonium, six with uranium, five with polonium, and at least one with americium by the Manhattan Project medical team. Only one of the subjects signed a consent form. The rest had no idea what was being injected into them. Reports show that many of the low-level physicians themselves were unaware of the exact substance they were injecting into patients.

These human subjects were essentially used as guinea pigs and calibration devices.

It was very important, you see. They needed to understand the dangers facing Manhattan Project workers and how to protect them. They were, of course, developing a weapon to eviscerate over 100,000 Japanese civilians. There is even evidence that Oppenheimer himself approved shipments of plutonium and uranium to be used for medical research.

During these experiments, the follow-up research was not thorough. Samples were contaminated or destroyed in transport on multiple occasions, and the ethical issues involved were essentially ignored.

The physicians involved knew that the procedures had no therapeutic benefits and would be detrimental in the long run if the patients lived. Human experimentation was justified because it was claimed that the patients were terminally ill; however, this was not true in all cases. Repeated errors in diagnosis, procedure, documentation, and research were made.

Fun fact: This was not known to the public until 30 years ago.

The Government covered up most of these radiation mishaps until 1993, when President Bill Clinton ordered a change of policy. Federal agencies then made available records dealing with human radiation experiments.

It is important to understand the lengths your Government will go to if those in charge believe it to be within their self-interest. They will lie, cheat, deceive, and straight up harm those that get in their way (or that they need for a simple human radiation experiment), and the public won't find out for decades, and nobody will be held accountable.

I shouldn't have to remind you that this same Government is still in charge today. Although the Manhattan Project may have been disbanded, Government agencies just like it still exist and operate today.

Who knows what is currently in development behind closed doors, who is being experimented on, and what atrocities are being committed today? If the past is any indication of the future, we won't know for another 50 years what is currently going on.

I think when we look back on stories like this, it becomes increasingly obvious that those in Government, especially the unelected, top-secret kind, cannot be trusted. Those who still advocate expanding, maintaining, or doing anything other than drastically dissolving the Government and its unaccountable agencies absolutely baffle me.

Transparency, consent, and accountability are tantamount to a free and flourishing society. Maintaining an incentive structure that often results in the opposite seems like a catastrophically bad idea.

What do you think?" —[Dylan Allman](#)

## manholes

13 December 2023: "Manhole covers are a familiar sight around the world.

But did you know that designer manhole covers in Japan are currently gaining so much attention as a new type of region-specific item/artwork, that they can cost up to \$900?

Japan's decorated manhole covers initially took shape as a public relations campaign for sewers. Beginning in the 1950s, the cast plates featured simple geometric patterns, such as the

“Tokyo” and “Nagoya” designs.

Yasutake Kameda conceived the intricate, artistic versions in 1985, to help warm a skeptical rural population to the idea of the costly but necessary modernization of the country’s sewer system.

Local design manholes in Japan feature elements special to a particular location: a town emblem, landmark, event, or official bird or flower. Today an estimated 95% of Japan’s 1,718 municipalities, across all 47 prefectures, now host their own unique covers.

Typically, a designed manhole cover costs approximately \$585. The color, however, is applied carefully by hand, and nearly doubles the price of a manhole to more than \$900.”

## Manley Massive Passive

6 December 2023: “Manley Massive Passive

Manley Massive Passive is a high-end stereo equalizer designed by Manley Labs. It was first introduced in the late '90s.

The unit gained popularity for its special construction and implementation of vacuum tubes, combining modern precision with vintage warmth.

The schematic of Massive Passive was based on Pultec EQP1A, making it kind of Pultec on steroids, that is more optimized for mastering applications since it has much more control.

The circuitry features a unique “Massive Passive” filter design, allowing for broad tonal shaping with both low and high-frequency shelves, as well as parametric midrange controls.

The tubes in the Massive Passive contribute to its unique sound signature, introducing a rich and harmonically pleasing character to the audio signal.

In terms of sound, the Massive Passive is known for its transparency, musicality and the ability to sculpt the frequency spectrum in its unique manner. It’s often described as adding a certain “magic” to the audio, enhancing the overall sonic quality.

It adds warmth, depth, and a touch of vintage coloration to the audio passing through it.

It was designed for mastering, but could be used on variety of audio sources if you looking to add richness and transparent spectral control to your sounds.

Its versatility makes it suitable for a wide range of musical genres, providing a powerful tool for achieving high quality production.” —[Nathaniel W.](#)

## mastering

14 July 2023: “In modern music production what’s the point of separating the mix and mastering process? Levels aside a master is basically a final mix.” —[JUSTIN](#)

**from me:**I sure you will get different interesting answers. The two differences for me are:

- 1) the mix is the “ideal” state of the song, while the master is for a particular distribution media.
- 2) the mix is inherent to the one song, while mastering includes how all the songs fit together.

As an example, back in the day we mastered for vinyl and cassette and later added mastering for a CD as well.

In modern times, is the release to a streaming service or a digital download, etc.

I’d master separately for each different streaming or download service.

Our engineer played brief clips from the songs and showed how they didn't sound like they belonged together.

Once all the songs had been mastered to be a single composite work, the entire flow of the music had continuity beyond just the order of the songs.

Not on that first collection, but on subsequent ones, we even went as far as adding new or replacing existing parts to foreshadow and recall the other songs in the collection& to make them sonically more consistent.

Changes for only that one particular collection.

The main official reference mix remained unchanged (with the exception of one song).

As an example, on one 3 song collection, all the rhythm guitar parts were recorded again with the same amp and guitar combo (with different effects to personalize each song).

My point is that mixing and mastering have different purposes.

The official final mix is the Platonic ideal for that particular song, while the mastering is bringing that song into one particular real world instance of the song.

As one more side note, I would love to be able to show you the examples I am discussing, but so much of our music was destroyed when the Costa Mesa thief (see that entry) stole our master tapes and hard drives to sell them for the iron content.

1 January 2024: “I’ve listened to some pro mastering engineer and he said

“Yes there is a chance that if the mix is truly great, I will listen to it and just set the loudness right, without any processing”

And it is still worth the money. Why?

Because it’s like insurance. You pay super experienced person, \$50 for example (my price for just mastering).

And he, with his enormous listening experience, and fantastic monitoring environment listens to your mix and says if it’s release ready or not. And if not then he fixes it as much as possible.

If you have bad frequency response in your room due to monitors or acoustics, it can be compensated during mastering in a better room. And your mix gonna sound much more neutral, and will translate well. But the mix itself should be done well anyway of course.

When you pay for insurance it also doesn’t necessarily mean that some job will be done. But you pay for being calm. That if something happens, it will be fixed.

Pretty much the same here. Of course when you send your song for mastering to an experienced engineer with much better listening conditions, he most likely will do something to

it, obviously.

But first of all, it's about being calm that your song gonna sound well before you release it.”

## Mentuhotep II

31 December 2023: “BLACK AFRICAN KING & QUEENS OF THE 12TH DYANSTY

Mentuhotep II, also called Nebhapse, king of ancient Kemet's (Egypt's) 11th Dynasty who, started as the ruler of the southernmost regions of Kemet in about 2080 BC, and reunified the country by defeating his rivals in Lower Kemet. He ushered in the period known as the Middle Kingdom (1938–1630 BC).

In the 14th year of his reign, Kemet had become a fractured nation due to successive raids in the Delta via the Levant. Mentuhotep launched a drive against Heracleopolis in an attempt to eliminate foreign influence and reunify the country. Not much is known of the war, but the Wasetians (Thebans) were aided by a change of rulers in the enemy capital of the Delta, and, by 1668 BC at the latest, Mentuhotep had captured Heracleopolis and reunited the nation. In subsequent years, fighting continued in the north against the Bedouin of the Arabian Peninsula, who habitually raided the delta region.

To consolidate the unification, Mentuhotep received the submission of Middle Kemet's local governors, most of whom he left in office, thereby establishing a series of powerful provincial families during the early Middle Kingdom. Waset (Thebes), located in the southern most regions of the nation became the national capital, and Mentuhotep's loyal supporters received the key government posts; he also accepted partisans of the defeated Heracleopolitans who demonstrated loyalty and pledged fealty to his new order.

The reunification of Kemet under Mentuhotep II ushered in a new sense of security

throughout the country and established Kemet's Middle Kingdom, an era that was to become a golden age for artistic and literary creation and a truly revolutionary period in regard to religion and Kemetic principals. The art of the Middle Kingdom betrays a wide range of visual uses of the past and, although the Memphite traditions of the Old Kingdom were briefly renewed, the kings of the 11th Dynasty tended to favor the Wa-Setian (Theban) traditions they had developed during the First Intermediate Period.

Mentuhotep's reunification was followed by great expansion in trade and building. At Waset he built a magnificent temple and tomb complex. The hills around the monument were honeycombed with the tombs of his officials. He built temples at numerous Upper Kemetic (Egyptian) sites, but little survives of them today. Much of what he built was destroyed by the later Sais princes of the Delta, Assyrians and Greek mercenaries who together destroyed the Temple of Karnak at what is known as the "Sacking of Thebes". He died about 1957 BC, leaving a reunited and prosperous kingdom to his successor, Sankhkare Mentuhotep III. Tradition accorded Mentuhotep II an honoured place with Kemet's other great unifiers, Narmer of the 1st Dynasty, Ahomse I of the 18th, and King Piye of the 25th.

#### QUEEN ASHAYET

Ashayet or Ashait was a queen consort, and wife of Mentuhotep II in the 11th Dynasty. She shared a tomb with four other women in their twenties and a young girl, Henhenet, Kawit, Kemsit, Sadeh and Mayet three of which were her sister wives. The shrines and burials were found in Mentuhotep II's Deir el-Bahari temple complex. Her titles were: King's Great Royal Wife, Priestess of Het-Heru (Hathor), Great of Kas, Foremost in her places, and Lady of Dendera.

The nine shrines in total were built in the First Intermediate Period, prior to Mentuhotep II's reunification of Kemet (Egypt). She and three other women of the six bore queenly titles, and most of them were Priestesses of Het-Heru (Hathor). The location of their burial is significant to their titles as Priestesses of Het-Heru as the cliffs of Deir el-Bahri were sacred from the Old Kingdom onwards." — [Typical African](#)

“The artwork is a facsimile created by Charles K. Wilkinson in 1926 from the original painting on the inner, front side of the sarcophagus of Aashyt. In the image it depicts the Priestess Queen Ashayet on her throne smelling a lotus, and being presented with various offerings by her royal servants. The women on the right sitting on her throne is one of her various sister wives.

#### QUEEN KEMSIT

Kemsit was a Kemetic Queen and royal Priestess of Het-Heru and royal consort of Menuhotep II of the 11th Dynasty. Her tomb and decorated chapel were found in her husband's Deir el-

Bahari temple complex, behind the main building, along with the tombs of her five other sister wives.

Most of them were priestesses of Het-Heru, so it is possible that they were buried there as part of the Neter's (Goddess's) spiritual followers, and they were most likely daughters royal of nobility. Her titles were: King's Beloved Wife, Priestess of Het-Heru and King's Ornament.

### QUEEN KAWIT

Kawit was an ancient Kemetic queen consort, and a lower ranking wife of Neswet (Pharaoh) Mentuhotep II of the 11th Dynasty. Her and decorated chapel was found in her husband's Deir el-Bahari temple complex, behind the main building, along with the tombs her five sister wives. The queen was also depicted on reliefs in the funerary temple of her husband Mentuhotep II. These depictions are today heavily destroyed, but it seems that she appeared in a scene showing a row of royal women.

Her titles were: King's Beloved Wife, King's Ornament, and Priestess of Het-Heru. She and three other women of the six bore queenly titles, and most of them were priestesses of Het-Heru, known to the Greeks as Hathor, so it is possible that they were buried there as part of the goddess's cult, but it is also possible that they were the daughters of nobles the king wanted to keep an eye upon.

## miko (shrine maiden)

A miko, or shrine maiden, is a young priestess who works at a Shinto shrine. Miko were once likely seen as shamans, but are understood in modern Japanese culture to be an institutionalized role in daily life, trained to perform tasks, ranging from sacred cleansing to performing the sacred Kagura dance.

The traditional attire of a miko is a pair of red hakama (divided, pleated trousers), a white kosode (a predecessor of the kimono), and some white or red hair ribbons. In Shinto, the color white symbolizes purity. The garment put over the kosode during Kagura dances is called a chihaya.

Traditional miko tools include the Azusa Yumi (“catalpa bow”), the tamagushi (offertory sakaki-tree branches), and the gehobako (a “supernatural box that contains dolls, animal and human skulls and Shinto prayer beads”).

Miko also use bells, drums, candles, gohei, and bowls of rice in ceremonies.

Miko once performed spirit possession and takusen (whereby the possessed person serves as a “medium” (yorimashi) to communicate the divine will or message of that kami or spirit; also included in the category of takusen is “dream revelation” (mukoku), in which a kami appears in a dream to communicate its will) as vocational functions in their service to shrines. As time passed, they left the shrines and began working independently in secular society. In addition to a medium or a miko (or a geki, a male shaman), the site of a takusen may occasionally also be attended by a sayaniwa who interprets the words of the possessed person to make them comprehensible to other people present. Kamigakari and takusen may be passive, when a person speaks after suddenly becoming involuntarily possessed or has a dream revelation; they can also be active,

when spirit possession is induced in a specific person to ascertain the divine will or gain a divine revelation. — [Wikipedia](#)

14 November 2023: "How to get crystal clear highs?"

Steps to get a clean top end for your mixes

First of all, run a session at 48.0 kHz

44.1 kHz is a standard for exporting and listening

But when processing sounds, 48.0 kHz will do better

And it mostly affects the highs.

96.0khz is also great but will require much more cpu.

Use oversampling when saturate

Due to aliasing distortion, your mix will sound dirtier if you don't oversample when saturating sounds

Notice: analog emulation plugins like compressors, eqs also saturate the sound

Especially be careful with boosting top end because that's where aliasing appears the most and makes your song dirtier

Clean the noise from your stems with software like iZotope RX

Tip: Use plugins like RX mouth de click to get rid of unwanted mouth sounds

Use compressor as de esser

It sounds much better than most de essers.

Cut 4-5 khz on sharp sounding sounds

Use smooth top end filters, wide shelf or analog modeled EQs that are designed for boosting top end, like Pultec

Sometimes less is more, and cutting some highs will sounds much better and cleaner

Don't be shy to cut some very top if your mix sounds overly bright

The main reason to do it is when you have many sounds fighting for that spectrum area

Don't overboost highs

One of the most popular rookie mistakes is boost highs a lot and on everything

Keep your mix balanced and not overbright

Cut highs from sounds that are literally don't need it

If you only can hear top end on the bass guitar in solo, and don't hear it in the mix anyway, cut it, it only adds dirt

And don't forget that you only can mix something you can hear, if your monitors/headphones are not detailed in highs you can't expect consistently good results in the top end

Happy mixing" —[Nathaniel W.](#)

# HOW TO MAKE THE KICK CUT THROUGH THE MIX

- Use high quality samples

29 November 2023: “Want to massively improve your vocal mixing?

Stop adding plugins on the fly.

1. Create a template with basic aux channels set up. Short reverb, long reverb, all basic delays, chorus, parallel processing.

2. Create a vocal chain where every plugin does its job and turn them on in order.

(I have a few compressors dropped, a few EQs dropped etc, I turn on the ones I want and delete the others)

How you can do it if you are a rookie?

Very simple. Just copy it from any pro, better with explanation on what does each plugin do.

With more experience you will understand how to tweak the template to your needs.

But having a chain with basic understanding of each step helped me drastically when I was learning.

No pro ever starts with empty project and adds plugin after plugin. Every pro has a template.

30 November 2023: “3 keys to a good mix

First is, technical aspect. This is probably the hardest one. Getting your sound right.

Back then, 100% of my brain resources during mixing was wasting on this, and I still couldn't make it right.

If you pleased how your mix sounds technically, the next key is, it should sound different. It should be very interesting and engaging. Like film where things constantly change and always something is happening.

You don't want one scene to last more than certain period of time, which is quite short comparing to the whole composition. Even if it's Hollywood filmed, best film director, your favorite actors, \$100m budget and the best CGI. It all gonna be boring within a few moments. That's the world we live in.

Right now, this is what I focus on immediately. I don't need to focus on getting the sound right, it happens automatically.

From the moment I hit play on your draft, I know exactly how I want it to sound technically, and I focus on imagining the movement. I imagine how the mix will flow, how it should be perceived, what emotions it should cause, how to achieve this. This is what takes my energy now.

Back then I just didn't have the resource left to think about all that artistic stuff. I tried to make it sound the best technically and was tired of the mix to this moment. So I've been exporting the mix forgetting about it until the next revision if there will be.

Now the movement and artistic decisions are my #1 focus in terms of creation and engineering. I not only think how to make it sound good, but both how to make it sound good and make the song come to life at the same time.

Like, what is the idea behind the song? How I can help the artist to make his idea to come true, and how can achieve it both technically and artistically?

And then, after your mix is technically right.. Oh, before you attack me, by right I don't mean the exact right the only way how it should sound. I mean how it should sound from technical perspective, whatever is the genre and the idea.

So after you done with both technical and artistic steps of your mixing process, you need to make this mix translatable to all systems. This is a different topic, but you should do it separately.

The mix and all this stuff you did before will make no sense if it sounds like that only in your conditions.

“Whatever sounds good” doesn't work. What sounds good to you in your conditions may destroy in other conditions. If you have a little bit of experience in sound engineering you know that.

That's it.

Hope it was helpful and you like my long format posts where I share my thoughts. I'm trying to teach you mindset. Not only some tricks.” —[Nathaniel W.](#)

30 November 2023: “Low end inconsistency

The second biggest low end mistake after the amount is its inconsistency

The problem is next:

Each system has its own usable frequency range, from full (like main monitors) to very limited (like a phone)

Speaker can be any size from phone to very big one, and your bass can cut at any note, depending on the speaker size.

The result will be bass that just disappears time to time. Because of the different notes playing and there will be a threshold at some point when speaker can't go lower. This will not sound good in most cases. And it will hurt the listening experience.

(There can be exceptions, when absence of some bass notes sounds natural and not hurting the composition, but it's still have to be heard and controlled, leave it like that should be a decision)

How to deal with the problem?

A good way to fix it is to add harmonics to your bass. Either at the problematic areas using automation, or on a whole bass track.

But most importantly.

How to hear it?

You most likely mix in the headphones or on monitors that go deep as 30 hz at best, 50-60 hz at worst. Actual usable range, not the specifications.

So you hear the sound fuller than most consuming systems. You don't hear how it will sound when bass gonna cut.

Basically there are several ways how you can detect these issues. First one is obvious, if you have multiple speakers of different sizes.

Second is, using headphones and “studio emulations”. Plugins like Waves Abbey Road, DSonic Realphones, Acustica Audio Sienna and so on. These tools can help, but!

You need to remember a few things.

1. With low class headphones the information you will receive will be much less accurate. Can it hurt your mix? I don't know exactly but possibly, I never tried anything like that with cheap headphones.

2. You can't just switch presets and think you getting useful info. You need to reference these systems and presets first, play some songs you know, learn it. Play your mixes, especially if you know that there are problems (you heard them in a car for example). And try to find presets that show these problems. Compare to references. Make sure references sound clean and well on that.

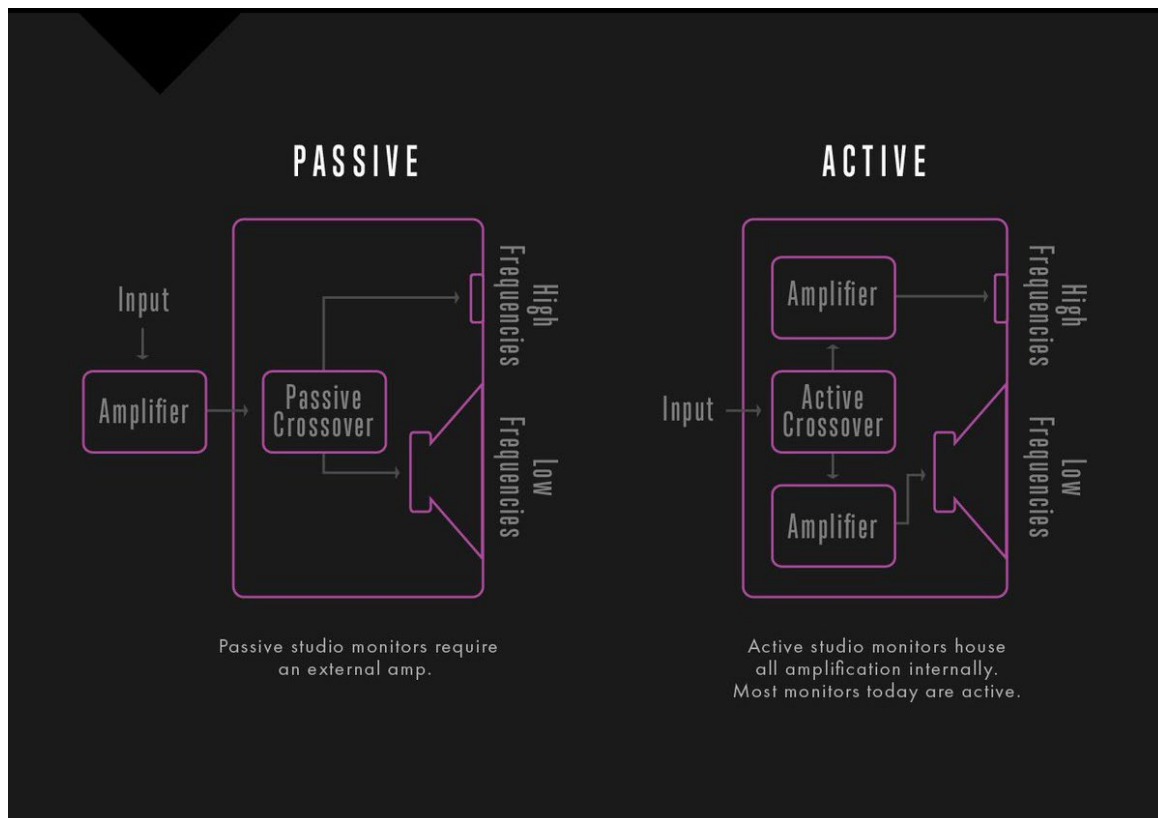

And so on. Only then these plugins can be useful.

Remember that you can't emulate another speaker completely, don't rely on these 100%, but we talking about inconsistent low end now, and these definitely can help with fixing it.

Third way, if you don't have any of these tools, try to monitor your mix highpassed. Like at 50 hz, at 80 hz, at 120 hz. And make sure your low end never "disappears". Of course some lower notes won't be audible, but the sense of bass playing can be achieved without the actual notes, but using the harmonics. Control it as we spoke earlier.

Try to find balance between good translation and not changing the bass tone too much, which I assume you like." — [Nathaniel W.](#)

4 December 2023: “Clipper vs Limiter

- What is the difference?
- When used?
- Soft Clipper vs Hard Clipper

A clipper and a limiter are both audio processing tools, but they serve different purposes.

A clipper is designed to intentionally clip or distort the audio signal, adding harmonics and altering the waveform.

• It’s often used creatively for distortion effects.

A limiter is used to prevent the audio signal from exceeding a specified threshold, controlling the dynamic range and avoiding distortion.

It’s commonly used in mastering to ensure that the overall loudness remains consistent without clipping.

Use a clipper for intentional distortion or creative effects, while a limiter is for controlling peaks and maintaining a balanced audio output.

~~~~~

Soft Clipper vs Hard Clipper

☑ A soft clipper introduces gradual distortion, rounding off the waveform peaks, resulting in a smoother sound.

It tends to preserve more of the original tone while adding a subtle edge.

☑ A hard clipper creates a more aggressive, gritty distortion with sharper cutoffs, often producing a harsher and more noticeable distortion effect, suitable for certain genres or creative audio applications.” —[Nathanaiel W.](#)

You can sculpt the overall dynamics and impact of individual instruments.

I currently use Slate Digital transient shaper, and I stack them into a rack, giving each instance a different range to operate in (picture below, see how “focus” is set differently)

Sometimes I use it broadband of course, but here we talking about the multiband approach. I can use 2 instances for low and high frequency transients. I can use 3 to treat the low/sub bass punch differently as well.

“oeksound spiff” is another great tool to do that.

Last time I did that when I mixed to a two track beat. (Yeah I received plenty of those on my \$100/song deal, it’s still valid by the way)

I couldn’t mix the drums because the beat was mixed so I used a few transient shapers to adjust kick and hi hat/snare punch separately.

Song really came alive and became more engaging.” —[Nathaniel W.](#)

23 December 2023: “Mixing in mono

- What is it?
- Why is it important?

Mixing in mono is a technique when you mix while monitoring your mix in mono.

Some people think it helps with mono compatibility only. Making sure your mix will sound good on mono speakers.

But it is not true!

While it is definitely helpful to make your mix sounding better on mono speakers, there are a few other, very big reasons to do it.

#1

When you hear your mix in stereo you less understand the actual depth of your mix

Depth means closer/farther, not left right.

You are too distracted by width that it is really hard to tell how much 3D space your mix has

Turning on the mono allows you to understand better if your space is not flat, and really has the depth.

#2

Listening in stereo, you less understand if some sounds fight for the same frequency area.

Imagine you have a shaker and a hat, one is more left and one is more right

You can not hear the conflict because they play from different spots on the virtual scene.

But as soon as you turn on mono you realize they sound very identical spectrum wise and you need to make them more different

Do not allow different sounds to sound similar.

In most cases it creates a mess. Exception is only if it's the artistic solution and the groove between sounds matches perfectly.

#3

Same with dynamics and levels. When your mix sounds wide it's much harder to tell which sounds trying to overpower each other dynamically, while in mono it's really obvious

And of course, when you notice that some of your sounds disappear in mono or become much quieter, it's a reason to think if you widened some of your sounds too hard with some "imager", and narrow them a bit.

This will make your mix mono compatible.

Some people will say "who cares about mono nowadays?".

But any pro will say, mono compatible mix sounds better in stereo too.

You can widen your sounds pretty hard without losing mono compatibility, but it's a whole another story.

In conclusion, don't forget to switch between mono/stereo monitoring while working."

23 December 2023: "Better low end with smaller monitors/headphones

Most likely, you don't have a giant full range system that will allow you to hear perfectly how much sub bass do you have in your mixes.

Here is a trick what you can do:

- Get a song from the artist you like, in a same genre, preferably with similar sounding bass on your speakers/headphones

- Load up the spectrum analyzer, and just see how much sub bass does the song have

Tip: you can use Pro-Q 3 on your master and on the reference, to monitor two spectrums at once

- Use an equalizer to match the amount of sub frequencies" —[Nathaniel W.](#)

24 December 2023: “What’s a static mix?

+ 1 technique how to achieve a good static mix

Static mix is a rough mix that is done on the first step of mixing. It is done by using only level and pan.

The purpose of it is to set the balancing, to have a good understanding of what you going to work with, and hear all of the potential problems.

It is important to do it before reaching out to EQs and compressors, because you don't want to process sounds for no reason.

Only if it doesn’t sound right in a good static mix, then it gets fixed with further processing.

Technique to get a good static mix

1. Move all your faders (physically or in a DAW, doesn’t matter) all the way down

2. Start bringing your sounds up, one by one.

3. Usually I start with kick, bass, snare, rest of the drums. Then melody, from most important instruments to least important. Then vocals. From lead, to doubles, and then adlibs.

Sculpt your mix by yourself. When you hear everything together from the beginning, you will

more likely miss something, distracted by all variety of sounds.” —[Nathaniel W.](#)

26 December 2023: “Pro mixing tip

If something sounds technically clean, where it shouldn't stylistically sound clean

We consider that a mistake.

We want people to enjoy your songs.” —[Nathaniel W.](#)

26 December 2023: “It's always a conscious choice of mine to make something sound clean or dirty. There is no default.” —[S7EWAR7 7U77LE](#)

27 December 2023: “Frequent mixing mistake

This mixing mistake ruins both mixes and then masters.

Here is the thing. You may like your kick in solo but in the mix it becomes much less noticeable and you don't get enough punch out of it.

What people start to do?

They start increasing the kick level, or reach out to transient shaper, or compressor, trying to get more punch out of it.

But they totally forget that the punch in solo is there. And if it's there, it's there.

You lose it in the mix not because of the kick, but because of other instruments. Kick can conflict with pretty much any instrument or even vocals.

Carve out more space for it. Sidechain more sounds from kick, let it breath.

It is a low frequency sound which already needs more loudness to perceive well enough since we hear low frequencies much worse.

When you try to increase the kick level trying to overpower everything, you make it much louder than other sounds. To the point where balance is destroyed.

And while it may sound good in the moment, your limiter will react to this kick very heavily during mastering, that will lead to pumping and hard limitations in terms of how much loudness you will get out of your mix.

It also will reduce the translation of the mix, it can get totally destroyed on other systems.

Conclusion: make sure your kick sounds the same in solo and in the mix. And if it's not, fix it by carving out the space for it.

Check your mixes. I'm almost sure you will hear this problem if you didn't pay specific attention to it.

28 December 2023: “Mixing songs with live instruments and drums is my favorite thing

It is much harder than electronic music.

Each slightest knob turn can ruin the mix. You need to be super careful.

Been working on one today.

I've been setting up the reverb for about 20-25 minutes for one instrument, three times for different ones. And for vocals separately.

I've been picking the preamp and compressor for vocals. Literally most just didn't work.

Finally used the Avalon, and the compressor was STA-Level. It went to Hitsville EQ which is

one of my go to vocal EQs. It sounds so amazing and works in many scenarios for me.

A few instances of Lexicon 480 reverb on sends and 1176 in parallel, with Roland Dimension D chorus on another send.

Making each instrument to have its role while supporting other instruments, and then making a different exciting hook without ruining the mix, is a much more challenging task when you work with live sounds.

But on songs like this engineers skills are tested the most.” —[Nathaniel W.](#)

How often there were cases where you didn't hear what your plugin does? And if it actually improves the sound?

Or, you get tricked by brain when turning on the plugin, because lights turn on, meters jumping, and you are sure that the sound became better

Actually brain can trick us into thinking it's better, but in reality it is not, and what you “hear” is a placebo.

There is a small technique to avoid this, and I know pro engineers who do it after adding every plugin

You close your eyes and click bypass a few times to not know if your plugin is bypassed.

Then clicking bypass again a few times, still with closed eyes, trying to understand in which state it sounds better. (Level match the output of a plugin for fair comparison)

Trust me, you will find yourself choosing sound without a plugin much more often than you think.” —[Nathaniel W.](#)

3 January 2024: “Pro tip: Internet graphics that “sound good” don’t always sound good. Beware of such dull regurgitations” — [Eduard](#)

To be clear: the technique itself is ham-fisted for many reasons. For one, focused EQ on the low-end alters the phase-relationship between kick and bass, and unequipped ears will let it pass unnoticed. Sidechain techniques suffer from the same (as well as other) complications...

12 January 2024: "Mixing without beat stems

If you have only a mixed beat and vocal tracks, here are my advices to make your mix better:

1. First of all, process the beat. Understand if it has any problems and fix them. Tonal balance, punch, piercing sounds. Make it sound the best in solo.
2. When you will be mixing it with the vocals, you still can sidechain vocals from the low end, using soothe2 or multiband compressor. Below 200 hz.
3. You can sidechain vocals from the snare, using 3000-4500 hz range. To give snare space and not overlap with vocals creating unpleasant sound.
4. If you sidechain the beat from vocals, use slower settings to not get your drums compressed.
5. If your beat has 0 dbfs peak level turn it down before mixing to your normal working level. Other than that, mix like you would do it with stems. And try to get the best results."

—[Nathaniel W.](#)

18 January 2024: “Most important mixing tip

Literally, you will never become good at mixing without understanding this.

Get rid of the idea that it is possible to watch some tutorials on vocal mixing, read some of my tweets on vocal mixing, look up for some chains and start making actually good mixes

It's like trying to become good at basketball by going out and just shooting the ball. Yes, in the end scoring is the most important part and who scores the most wins. But soon as the game begin, you will score nothing and be the most useless player, if you never actually practiced the game of basketball.

The rules, how to dribble, how to pass, tactics, strength, speed, team play, fake moves, tricks, shooting under pressure etc.

Yes you can have strong sides, there is no perfect player. But if you ONLY practice shooting with yourself, you won't become any good at basketball. Probably you will win against people in your neighborhood who never held the ball.

Sooner you will understand that this concept is a total nonsense, sooner you will become good at mixing

(Don't think I was different, I was thinking the same)

You will save years if you won't take that route. I didn't have a guy who would told me that. Everyone is happy to get massive engagement and attention by posting chains and presets that just don't work and won't make you any better.” —[Nathaniel W.](#)

21 January 2024: “Pro mixing tip

Don't just mix in solo and check in a whole mix.

Mix in the context.

Don't be afraid of EQing a single track while listening the whole mix.

Instruments and their frequencies sum in a very complex way. You can't predict how sounds will sum up.

So hearing the result and adjusting it on the go is a great way to get a great end result.”

—[Nathaniel W.](#)

27 January 2024: “Why your mixes are not loud?

If you have opportunity to tame the loud peaks on individual channels without distorting them, DO IT

Why would you need those peaks to trigger limiter and tame your sounds all together?

If your mix have those peaks you don't have a choice but push them into limiter

And what would sound cleaner?

- Limiting only them individually.
- Limiting the whole mix because of them.

Obviously first.

You don't want your limiter to fall into -6 gain reduction for the whole mix when it can be done only to the sound that caused these peaks.

So control the peaks on individual channels as much as possible.

Only then push it to the limiter to get maximum loudness

That way, you will have way more headroom to do it, hence get more loudness out of your mix.” —[Nathaniel W.](#)

Use stands that are really heavy. Those usually can fit some heavy material inside. Often sand is used.

You can see their rectangle form, which is allowing to fill them with something.

You can make DIY stands from a few pieces of wood and fill it with sand

This will be cheaper and infinitely better than those cheapest “singing” stands.

Hard construction will prevent unnecessary vibrations and keep your sound much more clean.

This is really important as it affects the upper bass - low midrange area, that is crucial to monitor well for achieving a great mix.

music notation

21 November 2023: "If you're interested to know how a college music program can accommodate students who don't come in reading Western music notation, here's how we did it at Cal Poly Pomona:

1) We have a “fundamentals” class that precedes the usual music theory sequence that includes basic skills for reading and writing music. This is a no-brainer. However, doing just this isn't enough.

Most music degree programs assume that students jump right into the usual music theory sequence, so an extra prereq class before that can delay graduation if the rest of the curriculum isn't adjusted somehow.

2) So, we also re-organized the rest of the music theory sequence to make it more modular. After another general music theory course, students can branch off into more classical theory, jazz/pop theory, and/or 20th/21st century theory, depending on their goals and interests.

3) Finally, this isn't just about the music theory sequence. We have majors, coursework, and ensembles beyond classical music (Mariachi, Songwriter Showcase, Electronic Music, etc.) that don't rely on notation in the same way.

Even after doing all this, we have to fight a lot of preconceived notions that we've dumbed down our music curriculum somehow, or we aren't as “rigorous” or “serious” somehow because of this.

This couldn't be further from the truth! We also have faculty who have won Grammys, who sing in the LA Master Chorale, etc.

But also, we're a finite department and we can't possibly cover every genre under the sun. Somewhere in storage we have half a gamelan. I have no idea how or why. I would love it if we did a search to find someone to restore it and lead a Javanese gamelan ensemble.

But that doesn't directly respond to the needs of our students in the same way and I doubt admin would go for that lol

I post this thread because I find a lot of the discussion about this to be detached from the realities of music education. It can be done. But there's not a quick fix. I'm proud of the work we did but it's not perfect and it's ongoing.

Personally though if I could get students to properly notate a heavily syncopated rhythm in 4/4 by sophomore year I would count that as a major victory lol” —[isaac io schankler](#)

Of the 153,209,283 X accounts following Musk at the time the data was collected, around 42 percent of Musk's followers, or more than 65.3 million users, have zero followers on their own account. Just over 72 percent, or nearly 112 million, of these users following Musk have less than 10 followers on their account.

When it comes to content creation on the platform, more than 62.5 million Musk followers have zero tweets. This would include users who have deleted all of their tweets by the time this data was collected over the past few weeks as well as accounts that have never before tweeted. More than 100 million Musk followers have less than 10 tweets posted to their account.

Another very interesting detail from Musk's follower data is exactly when his followers created their accounts. Musk completed his acquisition of Twitter on October 27, 2022. Out of all of Musk's current followers, more than 25 percent, or 38.9 million, were created on or after that date.

(e.g., AIDS,
cancer therapy, sea sickness)

Though it is known to be extremely damaging to the immune system, chemotherapy treatment is claimed by practitioners to benefit cancer and AIDS patients. But *chemo* has some other serious side effects too, including nausea. "Marijuana is the best agent for control of nausea in cancer chemotherapy," according to Dr. Thomas Ungerleider, who headed California's Marijuana for Cancer research program from 1979 to 1984. This is also true in AIDS and even in the unsettled stomach common in motion sickness.

Pharmaceutical nausea control drugs come in pills that are often swallowed by the patient only to be thrown back up. Because cannabis can be ingested as smoke, it stays in the system and keeps working even if vomiting continues.

Throughout California's 10-year Compassionate Marijuana Medical law, George Deukmejian, both as attorney general and as governor, with no regard for the suffering of dying cancer patients, made it virtually impossible for them to get cannabis. California Governor Pete Wilson was following the same course until the medical marijuana initiative passed in November 1996.

Gavin Newsom

30 September 2023: “THREAD. The recent behavior of Gavin Newsom on the issue of homelessness is among the most alarming things I’ve seen from a Democratic Party politician in recent years. If you haven’t been following, I collect four examples here.” —[Alec Karakatsanis](#)

30 September 2023: “First, he recently spoken openly about how he was so mad about federal judges protecting the constitutional rights of homeless people that he thought about doxing the personal contact information of judges so mobs of angry people could intimidate them:” —[Alec](#)

[Karakatsanis](#)

30 August 2023: “THREAD. Yesterday, the sitting Governor of California, a Democrat, was so angry that judges applying basic constitutional principles wouldn’t let armed government agents clear homeless people off the street that he began talking about inciting vigilante mobs against the judges:

Time and again, Newsom and other Democratic Party officials call themselves “progressive” and use that label to push some of the most cruel, ineffective, and authoritarian policies. So, how can we figure out when prominent people and their policies are actually progressive?” —[Alec Karakatsanis](#)

30 September 2023: “Second, he is trying to get the right wing of the Supreme Court to overturn a bedrock constitutional principle in order to permit the government to put homeless people in cages for simply existing on the street *even when there is no shelter space.*” —[Alec Karakatsanis](#)

28 September 2023: “The legal issue here is whether the government can put human beings in cages for living on the street *even if there is no available shelter.* Pretending this barbaric attempt to criminalize the poor is new or a “rare” agreement btw political parties is a lie.

The New York Times: In rare alliance, Democrats and Republicans seek legal power to clear homeless camps. Dozens of leaders, mostly from Western states, have asked the Supreme Court to overturn lower court decisions that restrict enforcement against public camping.” —[Alec Karakatsanis](#)

30 September 2023: “Existing law, which outrages Newsom, is government can jail people for being on the street, but only if there’s available shelter such that people are choosing to be on street instead of shelter. If people have nowhere to go, the courts said it’s unconstitutional to cage them.” —[Alec Karakatsanis](#)

30 September 2023: “Third, Newsom quietly did something remarkable. He created an entire new court bureaucracy in California, marketed with the acronym CARE, that seeks to dramatically expand the power and capacity of courts to coerce treatment of mentally ill people.” —[Alec Karakatsanis](#)

7 September 2023: “THREAD. California politicians are about to complete an epic charade. The Governor is about to sign into law a massive new bureaucracy called “CARE Court,” which stands for Community Assistance, Recovery and Empowerment Court. It’s a story not getting enough attention.

I’m writing about CARE Court for two reasons: 1) It illustrates how bureaucrats craft “reforms” that make the structural problems of our society worse; 2) CA politicians co-opted the language of “care” in service of an unprecedented expansion of state control and repression.

Remember: Status quo elites and people who own things win every time public is told structural problems of inequality (like housing) can be solved not by confronting the things leading to inequality, but by regulating that inequality with more layers of state power and control.

So, what is CARE Court? For background, read the basics about why it is so alarming in this Human Rights Watch analysis. In short, the plan creates an entirely new coercive court system in every county in California at significant cost to taxpayers.

Court gets power to coerce “treatment,” targeting people with mental illness and unhoused. All backed threat of conservatorship (people lose power to make decisions over their lives/bodies), and the power of government to use violence to enforce court orders.

The law itself does not ensure or provide ****any new housing or treatment capacity**** for a system that is already in a crisis of scarcity. The new bureaucracy operates entirely separately from any investment or initiatives in the actual care that would be provided to people.

You also have to understand that the push for CARE Court by Governor Newsom is coming against the backdrop of four larger phenomena:

1. A historic increase in inequality and shortage of affordable housing in California that causes widespread homelessness and housing insecurity;
2. A pervasive lack of sufficient treatment, either with respect to trained personnel or the physical infrastructure required to care for people’s medical problems;
3. A growing criminalization of poverty and mental illness, seen most recently in the wave of California cities criminalizing sitting, lying, or sleeping in public.
4. Elite political and upper class circles in California have been buzzing about the “disorder” on California’s streets. The sense of urgency to “do something” or to *appear to be doing something* about homelessness and mental illness has become a sort of obsession among people who see themselves as members of the political elite in California. This groupthink likely explains why Newsom’s plan passed the Senate 38-0 and the Assembly 62-2.

CARE Court won’t solve homelessness or mental illness, it makes things worse. The bill is widely opposed by civil rights, human rights, mental health, medical, homelessness, and disability advocacy organizations. Experts agree that coerced treatment is terrible policy:

1. Forcing people to obtain “treatment” against their will is not an effective medical intervention.
2. Even the most coercive bureaucracy in the world will not solve a basic problem of math: California has not committed to doing anywhere what it takes to provide the supportive housing and mental health infrastructure to make a dent in the problem.
3. By diverting enormous sums of money and personnel into creating an entirely new government bureaucracy full of judges, court personnel, liaisons to other existing bureaucracies, consultants, county government lawyers, public defenders, etc... the CARE Court diverts enormous sums of money away from the investments that are needed and creates an additional layer that actually makes it harder for people to get what they need. (Anyone unfamiliar with the woeful inefficiency of California’s various existing court bureaucracies should read *The Trial* by Franz Kafka and then imagine something even larger and more ineffective at solving social problems).

The Plan will hurt Californians in need of housing who do not suffer from mental illness by requiring counties to prioritize CARE Court participants for services and placement but not actually increasing the number of available places to live or the accessibility of services. So the bill will actually exacerbate the problems faced by other populations of people who are housing insecure or in need of treatment.

So, what's really going on? Well, an unprecedented movement has come together in California and across in U.S. to replace bureaucracies of control with investments in care. A big problem? Elites don't actually want to create more affordable housing or universal health care.

In my view, this language of investments in the things people need to flourish and a focus on helping community-based delivery of those things, is threatening both to existing bloated bureaucracies (like courts, police, prosecutors, prisons, probation, parole, etc.) but also to powerful interests who depend on certain features of housing and health care systems to make profits. Investments in care are popular among ordinary people and are backed by scientific consensus that those investments promote safety far more than police/prisons/courts.

I believe that this narrative/policy threat from people who are building alternative systems of "care" is a significant factor in the development/marketing of CARE Court by politicians, bureaucrats, and profiteers who profit from systems of isolation, punishment, and extraction.

There may not be a home for you to live in, but there's now a judge who can order you to live in it. And in liberal fashion, CA will provide, with tax \$\$\$, a lawyer to represent you in a court battle over whether to force you to get treatment from a provider who doesn't exist.

This represents another prominent example of a ruling political class that is incapable of actually addressing the structural problems of our society, particularly the lack of affordable housing, the lack of universal access to medical care, and growing inequality.

So, unwilling to do things that would be required to solve the problem, but threatened by a popular narrative from grassroots movements about the need to provide people the things they need to survive, the political elite turn to a marketing mirage: their own rhetoric of "care."

The goal? Make what they say hard to distinguish from what people actually interested in "care" want. It's mass obfuscation that traps us in an endless PR loop designed to trick people into thinking that those in power are well-meaning and working on the big problems of society.

All of this carries with it the same dangers that I wrote about with virtually every recent "criminal justice reform" in my book *Usual Cruelty*.

These reforms are designed to take away energy from radical changes by convincing well meaning but low-information voters who care about holistic well-being to support changes that do nothing to fix problems precisely because they preserve underlying root causes of the problems.

And this is how you should see their rhetoric. They claim the law is about "preserving self-determination" and "self-sufficiency," and "empowering." The very title is chosen so that everyone who hears about it on TV or in the paper immediately thinks about the concept of "care."

And it works. Here's how the *San Diego Union Tribune* and *SF Chronicle* naively described the impetus behind the law, essentially reprinting claims from the Governor that the legislation is about "helping" the state's most vulnerable people.

Only a profoundly lost government would unanimously pass a bill targeting homelessness that doesn't provide any homes.

Only a concerted propaganda effort can portray coerced government intervention opposed as ineffective and inhumane by the actual experts who devote their lives to working on these issues as *Òcompassion.Ó*

Only the most cynical political elite would portray a court bureaucracy using threats of

eventual violence to force involuntary treatment as ‘preserving self-determination.’ ” —[Alec Karakatsanis](#)

nice

The word "nice" entered English in the late 13th century from Old French “nische” (meaning careless, clumsy, weak, needy, foolish, ignorant) from Latin “necius” (meaning killer). When the word entered English it was an insult against someone who was extremely over-dressed. Over time it changed to the modern meaning from references to someone being nicely dressed.

After the coup d’état in Niger and the removal of the French puppet from the presidential position, the West African organization ECOWAS, which is under the full control of the United States and France, announced that it would attack Niger.

Yesterday, Mali, Burkina Faso and Guinea jointly declared that the attack on Niger is an attack on all of them and that they will intervene militarily.

But the most interesting part is Algeria’s statement that it will also intervene militarily if Niger is attacked. Today the Chief of Staff of the Algerian Army arrived in Moscow for a meeting with Shoigu. Algeria is likely to receive heavy weapons from Russia and Iran through its ports.

The USA and France have confirmed that they support military intervention by ECOWAS, de facto confirming that they are creating a new war in the world like in Syria and Ukraine.

Meanwhile, a meeting of defence chiefs of ECOWAS member nations scheduled to hold in Accra, Ghana, yesterday, Saturday, August 12, to concretize the planned troops deployment for military intervention in Niger Republic, was unexpectedly called off. Reason being that member nations are divided on the need for such an intervention at this time.

Cape Verde joins the ranks of Sierra Leone, Ghana, Liberia and Togo who earlier on declined to take position on the proposed military intervention in Niger. This explains why the proposed Accra, Ghana meeting of ECOWAS military chiefs eventually failed to hold.

Not sure if it’s a coincidence, but all these institutional resistance to military intervention became more evident and grew louder shortly after RUSSIA openly warned against military intervention in Niger. Beyond that, Africans have been up in arms against the rushed decision and the campaign against it has been robust and simply overwhelming, both online and on-site.

Jacques Chirac, the former President and former Prime Minister of France said the following:

“We have to be honest and acknowledge that a big part of the money in our banks comes precisely from exploiting the African Continent.”

“Without Africa, France would slide down into the rank of a third world power.”

“We bled Africa for four and a half centuries. We looted their raw materials, then we told lies that the Africans are good for nothing. In thre name of religion we destroyed their culture. And after being made rich at their expense, we now steal their brains through miseducation and propaganda to prevent themn from enacting Black retribution against US”, Jacques Rene Chirac, former President of france

France is currently the 7th largest economy, with a GDP of ~\$2.9 Trillion dollars.

It is estimated that if you stripped African wealth away from France, the country would plunge to the 15th place, at a GDP of \$1.3 Trillion.

However, Africa is not the only remnant of Franchise colonialism. If you stripped away all overseas colonial territories from France, their GDP would plummet to \$1 Trillion... almost A THIRD of what it is today.

In per capita terms, France would plummet to a GDP per capita of \$12k... which is on par with Mexico.

France, without its colonial possessions, would truly be an impoverished country without Africa and its overseas territories.

France, however, maintains that the CFA Franc system is not as one-sided as it seems, and that participation in the CFA Franc system is “completely voluntary”. Nothing can be further from the truth.

France insists that they continue to provide aid for their colonies, but any “aid” that France provides comes DIRECTLY FROM AFRICAN FOREIGN EXCHANGE RESERVES stored in French Central banks. This means that any aid France provides to Africa comes directly from the wealth that the French themselves have stolen from Africa.

France says that participation in the CFA Franc system is “completely voluntary”. But no one in the right mind would willingly accept a clearly one sided deal. However, France has bribed many African leaders to accept these deals which are clearly disastrous for their countries. Many African leaders are handpicked by France and the west, effectively serving as puppets. Many African leaders of the newly independent countries were personally handpicked to Jacques Foccart, French oligarch, politician, and advisor to the French president on African affairs.

Gabon is a CFA Franc member whose former president, Omar Bongo, was effectively handpicked by the French Oligarchs. France filled Bongo’s pockets with endless bribes to ensure Gabon remains subservient to France. Bongo saw his personal wealth skyrocket to to \$130 Million, at a time when 70% of Gabon’s population lived in extreme poverty. In return, Bongo adopted the CFA Franc and further permitted French oil company (Elf), and French Mining

companies (Ariva and Total Energies) have unlimited access to Gabon's oil reserves and uranium mines.

Bongo further bribed French politicians to ensure his power remains undisturbed. The current president of Gabon is Omar Bongo's son, Ali Bongo.

Gabon has one of the highest rates of infant mortality on earth, while their puppet leaders are multi-millionaires.

A similar situation can be found with Mohamed Bazoum, the recently ousted president of Niger. Bazoum has been a loyal puppet of the west, often times known to severely downplay the atrocities of French colonialism.

Some (unconfirmed) estimates of Bazoum's net worth are as high as \$527 Million, at a time when 40% of Niger's population lives in extreme poverty. Niger's per capita income is roughly \$480 per year, and ranks 187th out of 188 in the Human Development Index (HDI).

Niger is known as "the Uranium capital of Africa" where 4 out of 5 French lightbulbs are powered by uranium from Niger. While at the same time, only 10-15% of Nigerians have access to electricity.

No rational person would ever accept France's one sided deal. Those that couldn't be bribed were made examples of.

Such was the case with socialist leader Ahmed Sekou Toure, leader of Guinea. After independence, Toure refused to adopt the CFA Franc system. Instead, he chose to adopt a unique currency for Guinea. He stated: "I would choose to be poor in freedom rather than be rich in slavery."

France immediately responded by cutting off all foreign aid to Guinea, dismantled the power grid, and flooded the country with billions of fake CFA Franc notes to massively ramp up inflation in the country. Additionally, France (a permanent member of the US security council) vetoed Guinea's membership into the UN. The result, according to a French politicians, was "a resounding success". Guinea was devastated economically, and till today, has never fully recovered.

Ahmed Sekou Tore is not the only one to resist French neocolonial dominance. Other revolutionary leaders include David Dacko, Thomas Sankara, Maurice Yameogo, Hubert Maga, Modibo Keita, Jean-Bedal Bokassa, and Sylvanus Olympio. They were either assassinated or ousted by France for refusing to adopt the CFA Franc.

Sylvanus Olympio was the socialist leader of Togo who refused to adopt the CFA Franc. 3 days before formally issuing a new, independent currency, Olympio was "mysteriously" assassinated. France refuses to look into his assassination (I wonder why).

Despite all this, France's claiming that participation into the CFA Franc is "Completely Voluntary" is beyond laughable.

France has gone to great lengths to ensure its colonial possessions remain subservient to France, even after independence. France still maintains multiple military bases in their former African colonies, and has **INVADED** the continent over 50 TIMES since their independence.

2. French Companies retain exclusive rights over virtually every natural resource in the former colonies.

The CFA Franc is not the only tool of modern day French oppression of Africa. After independence, France retained exclusive rights to all natural resources in their former colonies.

4 out of 5 lightbulbs in France are powered by uranium from Niger. And 75% of the French power grid is nuclear powered. This means that Niger single-handedly powers 60% of France's electricity... at a time when only 10-15% of Nigerians have access to electricity themselves.

French State-owned mining company, Ariva, retains exclusive mining rights across all of French North Africa's vast uranium reserves. They have fully bribed Niger's government to loot the country dry.

Here is the one sided contract that Ariva has with Niger [pictures follow the text]

France boasts the 4th largest gold reserves, with 2,436 tons, yet not a single gold mine within its borders.

Mali, a former colony of France, has 860 gold mines and produces 50 tons of gold per year, but doesn't have any gold reserves in its banks.

Apart from looting the continent dry, and destroying domestic growth in North Africa, France also dominates north Africa's foreign trade.

France buys African natural resources at sub market prices, pays minimal royalty fees, and then resells to Africa above the global market price. This is a classic colonial tactic used by the British in India, and other colonial powers elsewhere.

What little remains of the African Domestic industries, are unable to sell to the global market without the permission of France.

This is nothing more than imperial dominance.

French billionaire, Vincent Bollore, is a singular owner of most of west Africa's major ports. In France, Bollore has earned the nickname "Emperor of Africa".

3. France retains right to maintain troops and military bases in the former colonies.

The third pillar of the "Cooperation Agreement" between France and their former colonies is the continual French military presence on the African continent.

France has the third largest amount of overseas military bases, behind the US and UK, and has roughly 5000 troops stationed in France.

To date, France has INVADDED Africa over 50 times since independence.

France has retained the right to not only retain a military presence, but they also are the only ones who get to supply African countries with military weapons and training. African nations are banned from making their own foreign policy decisions without consulting France.

French post-colonial activity has shown no regard to the ethnic makeup of their colonies, and as a result, they empower one ethnic group which later goes in to suppress another group who they have had historical animosities with. French (and NATO) military presence in Africa has led to increased terrorism from Al Qaeda and other religious extremists.

There have been more deaths in Africa from French-trained national security forces than there have been at the hands of terrorists and other militant groups.

With France dominating virtually ALL aspects (monetary, economic, political, fiscal, military, etc...) of their former North African colonies, can you really say that they are truly independent? Can you really say that colonialism came to an end?

France continues to maintain their colonial empire till this very day.

Any aid that Africa receives from France is aid that France provides via the African foreign exchange reserves stored in Paris. Not only is that Africa's rightful wealth, but it needs to be paid back with interest. Furthermore, that money can only be spent on aid from companies based out

of France, or from companies approved by France. So there is no way Africans can legally seek aid from a country such as Russia.

Other global financial institutions, such as the IMF and the World Bank, are poison pills. Both the IMF and the World Bank are based out of the USA, where America retains veto power. Any aid that comes from them comes with strings attached, and countries will never be able to repay it without enacting massive austerity programs which will further damage the already-impooverished nations.

The Africa Development Bank, based in the Ivory Coast, is allegedly suppose to aid in the development of Africa, but it too is a western puppet. Ivory Coast is a loyal ECOWAS member, and the president of Ivory Coast is a former IMF economist fully embedded within the French elite.

Lastly, North Africa is not the only element of French neocolonialism. France still owns and occupies many islands across the globe. Together, the total size of France's overseas possessions amount to the size of Bulgaria.

But the real value in French overseas islands is not the land itself, but the oceans that surround it. Owning an island means you also own all rights to the ocean surround them. France owns all fishing, mining, drilling, etc... rights around all islands it occupies. This brings France's total Excuse Economic Zone (EEZ) to 8% of the total global area.

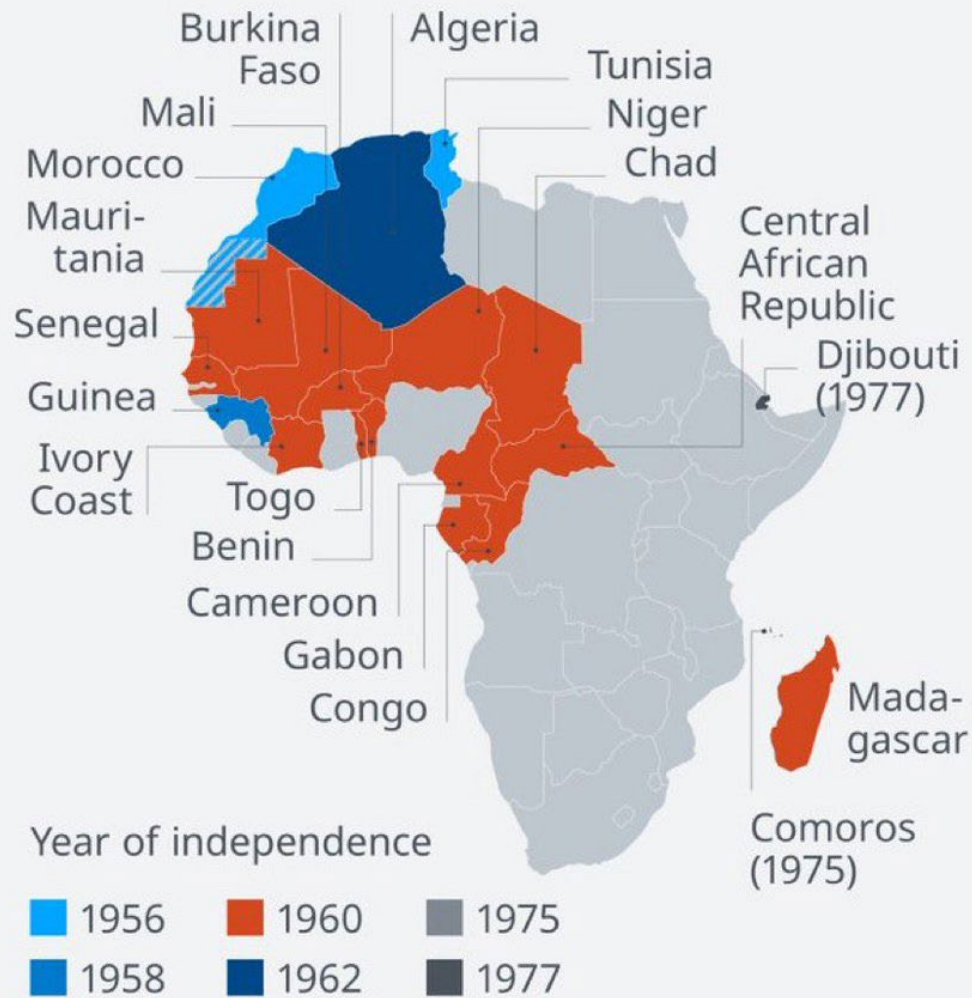

The country of France takes up 0.45% of the global land area. But factoring in France's oceanic EEZs means that the French people (0.84% of the global population) own 8% of the global surface. This is more than all of continental Europe. France owns more EEZs than any other country on earth, and is a reminder that French imperialism is still alive and well.

Pictured below: France and its overseas colonies (left), and the French EEZs (right).

France is currently the 7th largest economy on the planet, but without their exploitation of Africa, and without their EEZs, France would drop to 18th place in the world standing, with a per capita GDP on par with Mexico.” —[Apollo](#)

Where the CFA franc is used in Africa

14 August 2023: “FRANCE - THE COLONIAL EMPIRE THAT NEVER DIED

In the wake of everything going on in Niger, Burkina Faso, Mali, etc... I decided to illustrate the atrocities of the French Colonial Empire which exists till this very day

FRANCE CONTINUES TO PLUNDER AFRICA TILL THIS VERY DAY

Every year, the French Empire extracts roughly \$1.5 TRILLION from its colonies. Without being able to exploit developing countries in Africa, their empire would collapse.

Since the end of WWII, direct imperial rule became not only difficult, but also frowned upon. Rather than give up their empire completely, they decided to simply hide it in an atrocious, but covert, fashion.

“Without Africa, France will slide down into the rank of a third world power,” former French President Jacques Chirac

Similar to how India was considered the “Crown Jewel” of the British Empire, French North

Africa had bankrolled, and CONTINUES TO BANKROLL, the modern French Empire.

In order to gain independence, most French North African colonies were forced to sign a so-called “Cooperation Agreement” with France. This was nothing more than the continuation of French imperialism in a different format.

The “Cooperation Agreement” prioritized French interests above all, without any consideration whatsoever towards the welfare of their colonies. There were three main pillars:

1. France retains Monitory Sovereignty and Control over French North Africa via the use of the CFA Franc currency.
2. French Companies retain exclusive rights over virtually every natural resource in the former colonies.
3. France retains right to maintain troops and military bases in the former colonies.

1. CFA Franc explained:

To control a country's money is to control its destiny. Without monitory sovereignty, there is no way to have economic sovereignty. Without economic sovereignty, there is no way to have political sovereignty. And that is precisely what France set out to do via the CFA Franc.

CFA Franc was first introduced by Charles De Gaulle, and is currently used by 14 nations in North Africa (Roughly 200 Million people). Originally, ‘CFA’ stood for “Colonial French Africa”, but as the image of colonialism became increasingly frowned upon, the acronym was later changed to “Financial Community of Africa”. Nonetheless, changing the acronym did nothing to change the underlying mechanics of how the the CFA Franc functioned.

The CFA Franc is tied to France's currency, at a fixed rate. This means that when the CFA Franc fluctuates in value at the exact same rate that the Euro does. French central bank retains the right to print, circulate and regulate all CFA Franc bills. CFA Franc nations don't even get to control their own interest rates. They are completely set by France. So in periods of economic turmoil, African nations are virtually powerless to set any monitory reforms needed for recovery.

At face value, this might initially seem to have its benefits, because being tied to a stable currency, such as the Euro, offers a degree of financial security and inflation protection. However, in practice, it makes export dependent growth extremely difficult. In order for a country to break out of poverty, it needs export-driven growth and its own monetary independence.

The CFA Franc is fixed to the Euro, which results in domestic goods becoming less price competitive whenever the Euro appreciates against other currencies, especially the US dollar, the global reserve currency. This has resulted in domestic industries never having taken off within these African countries. As a consequence, virtually every CFA Franc nation has seen a Real GDP DECREASE from their 1970s levels. Decreasing Real GDP, followed by a stagnated export economy, has resulted in economic ruin for the people of the CFA Franc Nations. The Ivory Coast's real GDP has decreased over 30% since 1978. Cameroon and the Republic of Congo have seen similar dips.

A more nefarious element of the CFA Franc is that Franc requires 50% of participating countries' foreign reserves to be stored with the French central bank. In addition, France require 20% additional deposits for liabilities.

This does two things. It extracts much needed wealth out of Africa, and into France. It makes the French economy look stronger on paper, and increases their government bond rating, at the

expense of Africa.

Depriving Africa of their own wealth has caused underdevelopment in these countries. The problem of underdevelopment was further compounded by the fact that Africa no longer became a reliable place to store investments. This caused CFA member countries to see Billions in wealth leave their already-impoverished country and go to Europe, America and abroad. Since 1979, the Ivory Coast saw \$40B leave the country in capital flight. The same story applies to other member nations. Capital Flight accounts for a very tiny percentage of money leaving the country, however, that relatively minor amount alone could have reduced African poverty by 55% had it remained within their respective countries.

To add insult to injury, France makes it incredibly difficult for CFA member states to access THEIR OWN MONEY stored in French banks. The CDA Franc charter states that 50% of foreign reserves must be stored in French central banks, with an additional 20% stored for liability.

If a member country wants access to their own money, they must do it in the form of a loan, which must be paid back, INCLUDING INTEREST AND COMMISSION. Yes... France charges African countries INTEREST IN ORDER TO ACCESS THEIR OWN MONEY. To add insult to injury, France will only grant access to that money if the countries's financial documents look stable enough...which they usually never do, because the CFA Franc system is designed such that there is little to no financial strength.

Below is a video from @ADDIMovement, the African Union's representative to the USA. She illustrates just how perverse this French-imposed colonial era system is.

France does not offer full transparency as to how they utilize the stolen— I mean stored, wealth from Africa, but large amounts of it gets invested into the French stock market in order to artificially keep itself propped up.

According to @ADDIMovement, for every \$14 Billion of African wealth that France invests in their stock market, the French treasury makes \$300 Billion profit in return. This is over the course of the past 50-60 years that France has imposed the CFA Franc system on Africa. That is roughly a 6% annual growth.

Meanwhile, the Africans nations only realize a growth of 0.311% (historical French treasury bond rates) for their wealth stored in the French treasury.

This means that for every \$14 Billion stores in Africa, the Africans have only realized a growth of \$2.5 Billion for the past 50-60 years. While the French have locked the remaining ~\$285 Billion FOR THEMSELVES.

It is worth repeating that African nations are almost never able to access THEIR OWN MONEY, while France gets to profit off of it at the tune of HUNDREDS OF BILLIONS. Such was the case after the 2008 financial crisis. After the 2008 crisis, African nations wanted to access their own money for economic recovery, but France would only allow it for countries whose financials were arbitrarily deemed stable enough... by France. And on top of that, France would only allow it in the form of a loan, which would need to be paid back at the commercial interest rates.

TLDR: the bottom line is that France did everything it can to ensure they stole as much wealth as possible from Africa to enrich their own country, while their former colonies remain completely impoverished.

26 August 2023: “CRITICAL UPDATE ON NIGER: The new Nigerien administration has put its military on maximum alert, in anticipation of an ECOWAS military strike any moment.

Military attack fears in Niger have peaked remarkably in the last few days. Interestingly, these attack fears began hitting home after the report that France had sought Algeria’s permission to use its airspace in a military strike on Niger, which Algeria reportedly declined. France denied it had made such request. Most recently, French President, Emmanuel Macron lost his cool and lashed out at the Nigerien junta for the continued detention of the ousted pro-France former president of Niger, Mohamed Bazoum. Coincidentally, days after his outburst and pressure on ECOWAS to act, the security situation in Niger deteriorated remarkably, leading the Nigerien junta to raise security alert levels in the country.

In fact, about two days ago, precisely Thursday the 24th of August, 2023, the foreign ministers of both Niger, Mali and Burkina Faso met in Niger’s capital, Niamey to discuss boosting cooperation on security and other issues of concern. By the close of that meeting, the head of the Nigerien junta, Abdourahmane Tchiani eventually signed TWO ORDERS “authorizing the Defense and Security Forces of Burkina Faso and Mali to intervene on Nigerien territory in the event of an attack.”

So, all that talk and threat from Mali and Burkina Faso, that any attack on Niger will be treated as an attack on both countries, has now been officially activated through those orders signed by Tchiani. Basically, things have gone from rhetoric to real action.

About a day ago, Vladimir Putin assured African countries in which Wagner PMC has presence that they have nothing to worry about over the sudden demise of Yevgeny Prigozhin, insisting that Wagner will fulfill its obligations to those countries (including Niger) and even do more.

Earlier today, Saturday, Nigerians once again held a massive pro-military rally, virtually filling the 30,000 capacity Seyni Kountche stadium in Niamey where they waved Nigerien, Algerian and Russian flags, chanting anti-France slogans and openly declaring their support for the military junta.

“We have the right to choose the partners we want, France must respect this choice,” said Ramatou Ibrahim Boubacar, a model wearing Nigerien flags from head to toe.

“For 60 years, we have never been independent, only since the day of the coup d’etat,” she said. (AJ)

Boubacar added the country fully supports the National Council for the Safeguard of the Homeland (CNSP), which seized power after President Mohamed Bazoum’s government was overthrown on July 26.

ECOWAS has maintained its not starting any war with Nigeriens, probably given the continent wide rejection of any military intervention in Niger, but news out of Niger implies otherwise, as the junta believes ECOWAS is under immense pressure and is actually planning to carry out its threat of military intervention, any time.

On Friday, Niger’s foreign ministry announced that French ambassador Sylvain Itte had 48 hours to leave, saying he refused to meet with the new rulers and citing French government actions that were “contrary to the interests of Niger”.

Paris rejected the demand, saying that “the putschists do not have the authority to make this

request”.

“The French ambassador, instead of leaving, thinks this is the land of his parents,” said Idrissa Halidou, a healthcare worker and CNSP member. “We are people of war, we are ready to fight against [ECOWAS].” (AJ)

The new American Ambassador to Niger, Kathleen Fitzgibbons equally refused to report to the junta saying they’re not the legitimate leaders. There are now rumors that after France, other Ambassadors who are uncooperative may also be asked to leave as the drums of war beat louder and louder.

FYI, the coup is one month today. Rooms for more dialogue still abound. Why this maniacal rush to war if not to set our region on fire?

May Africa win!” —[J. C. Okechukwu](#)

Norfolk Island pine

25 December 2023: “The Norfolk Island pine is a species of conifer native to Norfolk Island. The tree is slow growing and in its natural habitat can reach 60 m (200 ft) with a straight trunk often measuring 3 m (10 ft) in diameter. Found in the coastal regions of Norfolk Island, the trees tolerate high winds and soil that is sandy with high salt concentrations. The pines are in demand for use in woodturning, a decorative art that uses a lathe to carve wood. Because Norfolk Island pines resemble Christmas trees, they are popular gifts and houseplant choices during the holiday season. Grown indoors, the trees remain small as opposed to their natural habitat height.” —CIA World Factbook (material that expires after 30 days)

North Korea

2 September 2023: “North Korea fires cruise missiles towards Yellow Sea: South Korean military

Missile launches come as South Korean and US forces conclude joint military exercises on Korean Peninsula.

North Korea has fired several cruise missiles towards the sea off the west coast of the Korean Peninsula, South Korea’s military said.

The launches early on Saturday morning follow just days after North Korea launched two ballistic missiles into waters off its east coast in what it described as a simulated “nuclear strike” on targets in South Korea.

Details of the latest missile launches towards the Yellow Sea at approximately 4am local time on Saturday (19:00 GMT on Friday) are being analysed by South Korean and United States intelligence authorities, South Korea’s Joint Chiefs of Staff said in a statement.” —[Aljazeera](#)

Null test is widely used for different purposes

But my small workflow that I wanted to share, and it's related to null test is this:

Sometimes you can get a session with tracks duplicated for no reason. It is not L and R channels. It's just 2 duplicates of the same track.

To quickly understand if these tracks are absolutely identical, I flip the phase on one of them, and if I hear no sound, it means I can delete unnecessary copy and keep my project cleaner, more organized.

If I for some reason will need a copy I can always create it, but initially I don't like having no copies in my session.” — [Nathaniel W.](#)

oat

botanical information:

Botanical name: *Avena* spp. (approximately 30 species); especially *Avena sativa*

Common name: oat, oats

Avena sativa is common oats.

Family: Poaceae (grasses)

origin:

Origin: The wild ancestor of *Avena sativa* and *Avena byzantina* (a closely related crop) is *Avena sterilis*. *A. sterilis* is originally from the Fertile Crescent of the Near East.

history:

History: The wild ancestor of *Avena sativa*, modern oats, is *Avena sterilis*. *A. sterilis* is originally from the Fertile Crescent of the Near East. Oats (like rye) started as a weed that grew near wheat and barley. As barley and wheat spread to cooler, wetter locations, oats became domesticated crops.

History: Oats were found at Gilgal I, a village site in the Jordan Valley north of ancient Jericho, from approximately 11,400 years B.P. (Before Present).

History: Oatmeal raisin cookies were U.S. President Jimmy Carter's favorite kind of cookie.

nutritional information:

Oats are a good source of protein.

Oats are a food that increases sexual energy and enhances fertility.

Oatmeal is high in soluble fiber. 1/3 cup of cooked oatmeal or 1/2 ounce of dry oatmeal is approximately 9 grams of carbohydrates. In 100 grams of oatmeal there are 13 grams of protein, 8 grams of fat, and 67 grams of carbohydrates. The carbohydrates in oatmeal are mostly complex, giving oatmeal a low Glycemic Index. Oatmeal has high levels of fat-burning antioxidants (especially good at getting rid of belly fat).

Oatmeal is one of the few foods on earth that has Gamma Linolenic Acid (GLA). GLA is an activated Essential Fatty Acid made from Linoleic Acid and a precursor of Dihomo Gamma Linolenic Acid (DGLA), a source of good eicosanoids.

One packet of low sodium instant oatmeal has 0.8 milligrams of zinc, which is 6% of the U.S. Recommended Daily Value, according to the U.S. National Institutes of Health.

Oatmeal helps cholesterol and helps fight cancer, diabetes, and obesity.

Chinese herbalism:

Chinese gender: slightly yang (slightly warm)

Chinese flavor: sweet

Ayurvedic herbalism:

Oats are an excellent food for those who have Vata constitution or those on an anti-Vata diet (high degree for reducing Vata).

octopus

23 August 2023: “Deep off central California, thousands of octopus (*Muusoctopus robustus*) migrate through cold dark waters to hydrothermal springs near an extinct volcano to mate, nest,

and die, forming the largest known aggregation of octopus on Earth. Warmth from the springs plays a key role by raising metabolic rates, speeding embryonic development, and presumably increasing reproductive success; we show that brood times for females are ~1.8 years, far faster than expected for abyssal octopods. Using a high-resolution subsea mapping system, we created landscape-scale maps and image mosaics that reveal 6000 octopus in a 2.5-ha area. Because octopuses die after reproducing, hydrothermal springs indirectly provide a food supplement to the local energy budget. Although localized deep-sea heat sources may be essential to octopuses and other warm-tolerant species, most of these unique and often cryptic habitats remain undiscovered and unexplored.” —[Science Advances](#)

Internal documents show they initially sought to test it on “a third world country” but worried about diplomatic relations. They opted to drop it on rural New Mexico because it was “nothing but cows and Mexicans” out here.

Tell THAT fucking story.

Stop glorifying monsters.

And you know what sucks? Nuclear weapons are such a huge industry here that I am actually worried that tweeting angrily about my government giving my mother cancer and a brain tumor will get me in trouble with prospective employers. This is the world I inhabit here.

Like, I should just allow my mom to take one for the team, as a baby who had a nuclear bomb literally dropped on her by her own government. The labs are among the biggest employers in my state. Everyone is beholden to them in some way. I’m tired yall

oversampling

25 December 2023: “What is oversampling?

What does x2, x4 mean?

Basically oversampling forces the plugin to process the sound in higher sample rate.

· Example: You run a session in 48.0k

Oversampling 2x means that the sound will be processed in a sample rate 2x more than your session.

In that case, it will be 96.0k

· Why is that important?

First of all, you need to know, that the highest frequency in your frequency range that you work with in your session equals half of your sample rate.

$48000/2 = 24000$

Hence, at 48.0k you have 0-24000hz range to work with.

How is it related to oversampling?

Shortly speaking, you reduce unwanted distortion that happens when you want to saturate your sound but the range you have is not enough to create new harmonics and they start to mirror back into the audible range, sounding dirty.

By increasing the frequency range, these harmonics will mirror back to non-audible range and allow your audio to sound more clean.

Let's take our example. With 2x oversampling, or 96.0k sample rate, you will have 0-48000 hz range to operate with, hence more headroom in the spectrum to create new harmonics, leaving a cleaner sound in audible range.

Of course it will require additional CPU since the plugin needs to process 2x more information. That's why using oversampling is more efficient than running the whole session in 96.0 khz. Just using it where it's really needed.

· Use oversampling on plugins that introduce saturation, including analog modeled EQs and compressors.” —[Nathaniel W.](https://twitter.com/natemixing/status/1739419979571663200)

Polish lawyer Raphael Lemkin coined “genocide” in 1944 in his *Axis Rule in Occupied Europe*, page 19, from Greek γένος or *genos* “race, kind” and Latin *-cide* “a killing”.

Lemkin used it to describe the Nazi occupation of Poland, later the Nazi genocide of Jews and Roma, Turkish genocide of Armenians, Roman sacking of Carthage, and Mongol invasions.

As is Cato’s “Carthago delenda est” (the full version was “Ceterum (autem) censeo Carthaginem esse delendam”), meaning Carthage must be destroyed.

Be absolutely clear on what Israel means when they say eliminated or destroyed.

When they claim Arab nations aren’t taking Palestinian refugees:

Egypt: 110,00 Palestinian refugees

Iran: 740,000 Afghan refugees, 10,000 Palestinian refugees

Saudi Arabia: 1/2 million to 3 million Syrian refugees; 400,000 Palestinian refugees

Syria: 568,530

Jordan: 2,700,000

Lebanon: 405,425

Kuwait: 40,000

Iraq 34,000

Gaza: 15 years of living under blockade

Israel's land, air and sea blockade has trapped more than two million people inside the Gaza Strip since 2007. No portion of Gaza's society or economy has been left untouched.

120,000 years ago: Humans left the Nile valley and entered the Middle East, at least as far as Palestine.

3740 BCE: “The evolution of languages provides a unique opportunity to study human population history. The origin of Semitic and the nature of dispersals by Semitic-speaking populations are of great importance to our understanding of the ancient history of the Middle East and Horn of Africa. Semitic populations are associated with the oldest written languages and urban civilizations in the region, which gave rise to some of the world's first major religious and literary traditions. In this study, we employ Bayesian computational phylogenetic techniques recently developed in evolutionary biology to analyse Semitic lexical data by modelling language evolution and explicitly testing alternative hypotheses of Semitic history. We implement a relaxed linguistic clock to date language divergences and use epigraphic evidence for the sampling dates of extinct Semitic languages to calibrate the rate of language evolution. Our statistical tests of alternative Semitic histories support an initial divergence of Akkadian from ancestral Semitic over competing hypotheses (e.g. an African origin of Semitic). **We estimate an Early Bronze Age origin for Semitic approximately 5750 years ago in the Levant, and further propose that contemporary Ethiosemitic languages of Africa reflect a single introduction of early Ethiosemitic from southern Arabia approximately 2800 years ago.**”
—[Bayesian phylogenetic analysis of Semitic languages identifies an Early Bronze Age origin of Semitic in the Near East](#)

The major Semitic languages are: Arabic, Amharic (spoken in Ethiopia), Tigrinya (spoken in Ethiopia and Eritrea), Hebrew, Tigre (spoken in Sudan), Aramaic (spoken in Lebanon, Syria, Israel, Iraq and Iran) and Maltese.

2000 BCE: Canaanites lived in the area.

19th century BCE: Jerusalem founded by Canaanites.

The ancient Egyptian name ꜥwšꜥmm means exalted head.

The ancient Canaanite name uru-salim means foundation of Shalim. Shalim is the Canaanite god of the setting sun and the nether world, as well as of health and perfection.

Both recorded around 19th century BCE.

1550-1400 BCE: Palestine and beyond (including parts of what is now Lebanon and Syria) were under the control of the New Kingdom of Egypt, starting under Ahmore I and Thutmose I.

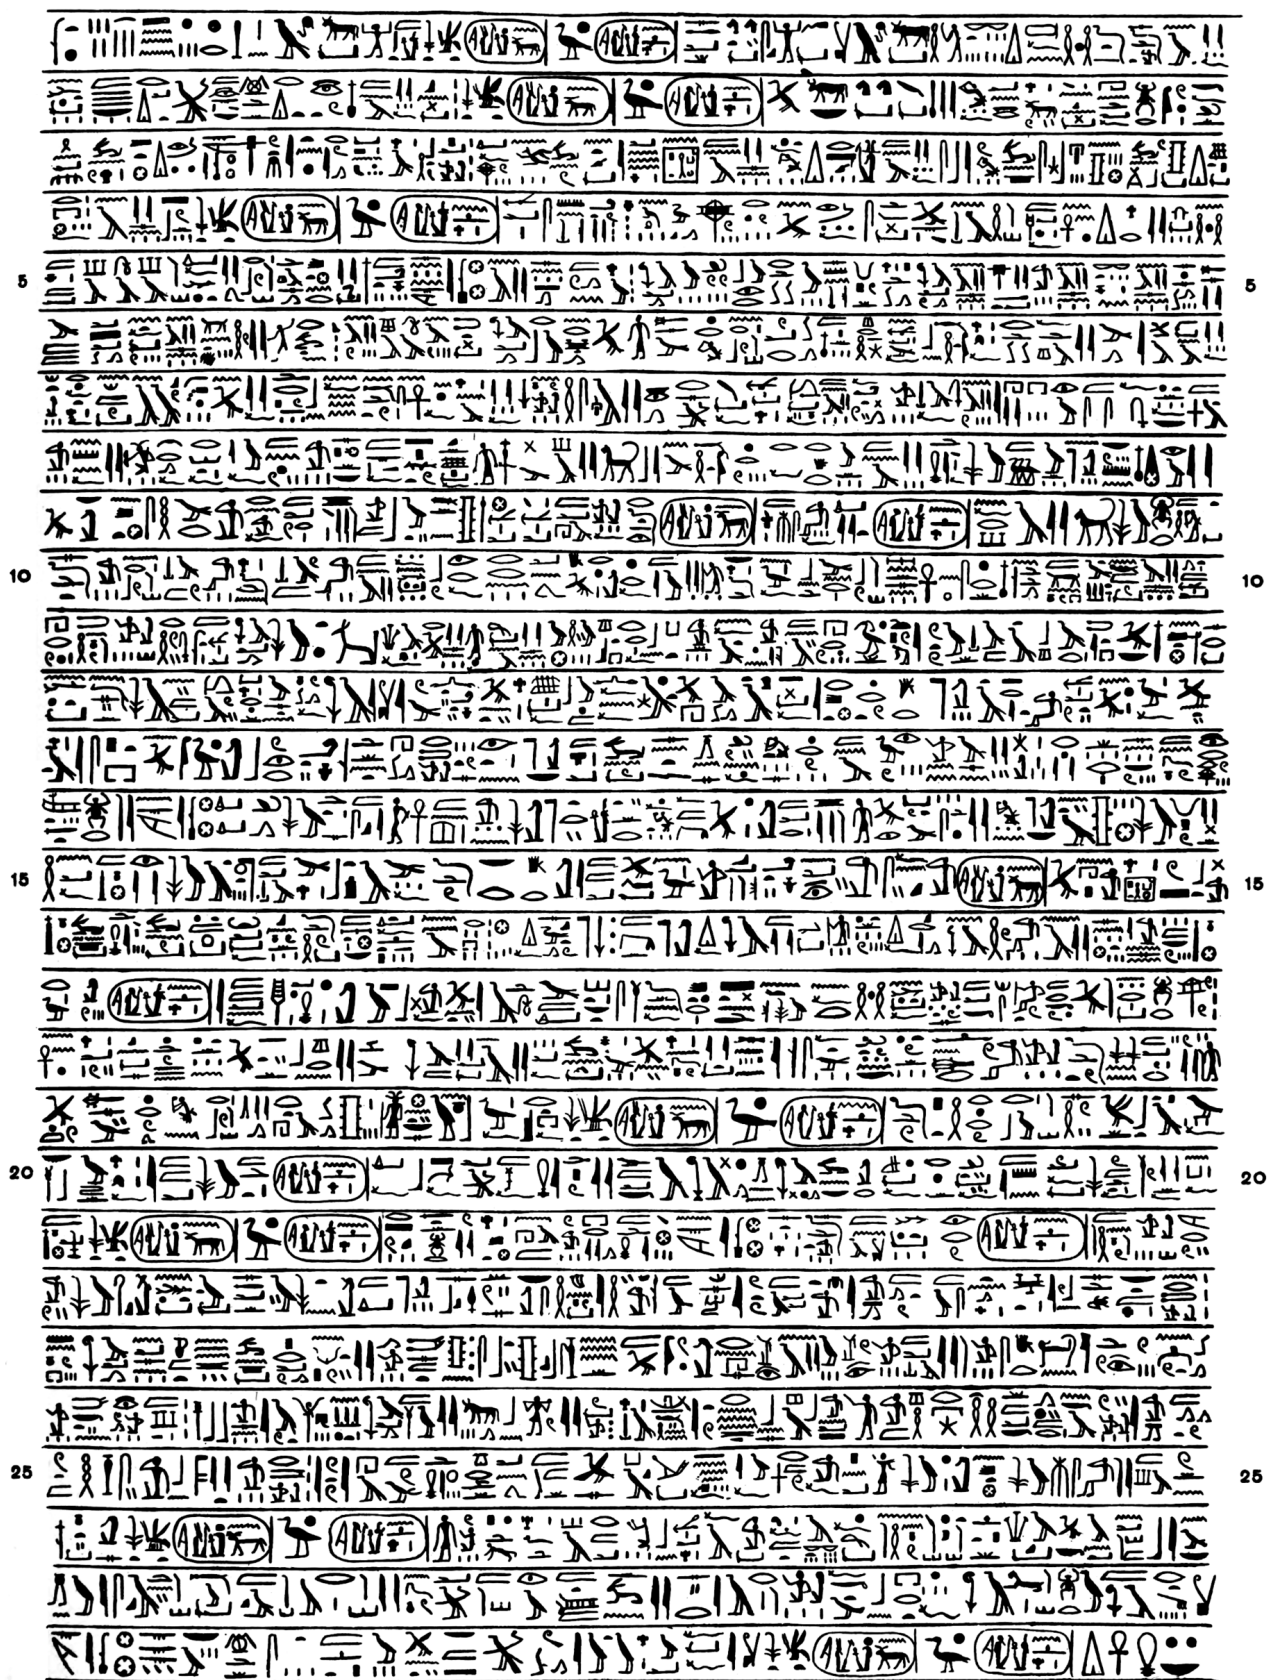

1450-1350 BCE: Palestine was divided into several small nations which were client states of the Egyptians. Chief Adbi-Heba of the Hurrians ruled from the city now called Jerusalem (1st half of the 14th century BCE).

1294 BCE: Seti I reconquered what is now Israel and beyond.

1210 BCE: The first ancient Egyptian references to the Sea People (Kadesh Inscriptions). The Philistines (called Peleset by the ancient Egyptians), now called the Palestinians, were one of the Sea Peoples. The ancient Egyptians settled the Philistines on the south coast of Canaan. Their homeland was called Philistia.

1209 BCE: The ancient Egyptians withdrew from Canaan. Among the many tribes living in the area were the Israelites and Philistines (as documented just above and below).

1206 BCE: The Merneptah Stele is the earliest reference to the Jews/Hebrews (called Ysrir in ancient Egyptian) being in the area now called Israel.

12th century BCE: Pottery of Philistine origin becomes common beyond Philistia across much of what is now called Israel. Some of the cities of Philistia include Ashdod, Ashkelon, Ekron, and

Gath. The Philistines are credited with introducing iron weapons, chariots, and new ways of fermenting wine to the local population.

1175 BCE: Philistia existed.

Historians and archaeologists agree that the northern Kingdom of Israel existed by ca. 900 BCE.

Historians and archaeologists agree that the Kingdom of Judah existed by ca. 850 BCE.

830 BCE: Philistia, Judah, and Israel all existed simultaneously.

711 BCE: King Sargon II of Assyria records in his annals conquering the Philistine city of Gath.

6th or 5th century BCE: Judaism evolved from Yahwism.

430 BCE: Herodotus mentioned Palestine five times in his *The Histories*.

330s BCE: Alexander the Great conquers the area. The area came under the rule of Ptolemy I Soter after Alexander's death. The Ptolemaic era was a time of peace and prosperity for Palestine, with trade and commerce flourishing in the most Hellenized areas.

285-247 BCE: The Hebrew Bible was translated into Greek at the Great Library of Alexandria, funded by Ptolemy II Philadelphus. By this time the Jewish community spoke Koine Greek and Aramaic and few Jews could even speak Hebrew and only a few Jewish scholars still knew how to read and write Hebrew. This translation was later called the Septuagint.

201 BCE: The Seleucids defeated the Ptolemies in 201 BCE. It took them until 198 BCE to gain complete control of Syria and Phoenicia.

167 BCE: During the Hasmonean period, Antiochus IV outlawed the practice of Judaism, including Sabbath observance, circumcision, and dietary laws, under the penalty of death. The Second Jewish Temple became a temple of Zeus.

164 BCE: Either Antiochus IV or his son Antiochus V rescinded the edict and allowed Jews to rededicate their temple, an event commemorated by Hanukkah.

140 BCE: Israel becomes independent under the rule of Simon, brother of Jonathan.

63 BCE: Roman general Pompey conquers Israel.

66 CE: Start of the Great Jewish Revolt, also called the First Jewish-Roman War.

70 CE: The Romans crushed the Great Jewish Revolt. The city of Jerusalem and the Second Temple were destroyed. Jews were banned from living anywhere near the site of the city's ruins.

130 CE: The city of Jerusalem is rebuilt. By this time Jews were a small minority of Palaestina.

4th century (Byzantine period): Constantine the Great converted to Christianity and Christian churches were built throughout Palestine, including the Church of the Holy Sepulchre in Jerusalem and the Church of the Nativity in Bethlehem. Some of the oldest still used Christian churches were built in this time period.

6th century (early Muslim period): Muslims conquered Palestine between 636 and 640. The protected people included the Christians, the Jews, and the Samaritans. The Muslims revoked the Roman ban on Jews living in Jerusalem.

1095-1291: The Crusader period, during which European Christians attempted to colonize Palestine.

1486: War broke out between the Mamluks and the Ottoman Turks.

1492: Sephardic Jews arrived in 1492 following their expulsion from Spain.

1516: The Ottoman Turks defeated the Mamluks at the Battle of Marj Dabiq and took control of Palestine.

[I] tend to support the latter view and have an additional argument: ... the need to sustain the character of the state which will henceforth be Jewish ... with a non-Jewish minority limited to 15 percent. 1896: Between 1896 and 1948, hundreds of thousands of Jews resettled from Europe to what was then British-controlled Palestine, including large numbers forced out of Europe during the Holocaust.

1923: Ukrainian Zionist Ze’ev Jabotinsky wrote in the *Iron Wall* essay (written in Russian) in response to British Colonial Secretary Winston Churchill prohibiting Zionist settlement on the east bank of the Jordan River: “We are seeking to colonise a country against the wishes of its population, in other words, by force. ... either Zionism is moral and just or it is immoral and unjust. But that is a question that we should have settled before we became Zionists. Actually, we have settled that question, and in the affirmative. Zionism is moral and just. ... The soil does not belong to those who possess land in excess but to those who do not possess any. It is an act of simple justice to alienate part of their land from those nations who are numbered among the great

landowners of the world, in order to provide a place of refuge for a homeless, wandering people. And if such a big landowning nation resists, which is perfectly natural, it must be made to comply by compulsion.”

1923: “Zionist colonization, even the most restricted, must either be terminated or carried out in defiance of the will of the native population ... If you wish to colonize a land in which people are already living, you must provide a garrison for the land, or find a benefactor who will maintain the garrison on your behalf.” —Ze’ev Janotinsky, political head of the the paramilitary Irgun Zvai Leumi and founder of the right-wing Revisionist Zionists and its Betar Youth Movement

1924: “The national autonomy which we demand for ourselves we demand for the Arabs as well. But we do not admit their right to rule over the country to the extent that the country is not built up by them and still awaits those who will work it [meaning European Jewish colonists].” —Ben Gurion

1947: The United Nations voted to split the land into two countries. Almost all of the roughly 650,000 Jews went to the blue territory in the map to the right, and a majority of the Arab population (roughly twice the size of the Jewish community) went to the orange.

The Jewish residents accepted the deal. The Palestinians, who saw the plan as an extension of a long-running Jewish attempt push them out of the land, fought it. The Arab states of Egypt, Jordan, Iraq, and Syria all later declared war on

Israel, as well (albeit not to defend the Palestinians).

Israeli forces defeated the Palestinian militias and Arab armies in a vicious conflict that turned 700,000 Palestinian civilians into refugees. The UN partition promised 56 percent of British Palestine for the Jewish state; by the end of the war, Israel possessed 77 percent — everything except the West Bank and the eastern quarter of Jerusalem (controlled by Jordan), as well as the Gaza Strip (controlled by Egypt). It left Israelis with a state, but not Palestinians. —[Vox: European Jews arrived at Zionism partly because of rising anti-Semitic persecution](#)

29 November 1947: “**UN Partition Plan of Palestine** The UN General Assembly (UNGA) passes Resolution 181 calling for the partition of Palestine into two states, one Jewish and one Arab. The resolution also envisions an international, UN-run body to administer Jerusalem. Palestine had been under the military and administrative control of the United Kingdom (known as a mandate) since the 1917 defeat of the Ottoman Empire in World War I. Civil strife and violence between the Jewish and Arab communities of Palestine intensifies.” —[Council on Foreign Relations](#)

29 November 1947: The United Nations adopted Resolution 181 (also known as the Partition Resolution) that would divide Great Britain's former Palestinian mandate into Jewish and Arab states in May 1948 when the British mandate was scheduled to end.

May 1948: “We should prepare to go over to the offensive. Our aim is to smash Lebanon, Trans-Jordan, and Syria. The weak point is Lebanon, for the Moslem regime is artificial and easy

for us to undermine. We shall establish a Christian state there, and then we will smash the Arab Legion, eliminate Trans-Jordan; Syria will fall to us. We then bomb and move on and take Port Said, Alexandria and Sinai.” —David Ben-Gurion, May 1948, to the General Staff

14 May 1948: “**Israel declares independence** Israel declares its independence as the British rule comes to an end. Sparked by Israel’s declaration of independence, the first Arab-Israeli war begins. Egypt (supported by Saudi Arabian, Sudanese, and Yemeni troops), Iraq, Jordan, Lebanon, and Syria invade Israel. The fighting continues until 1949, when Egypt, Israel, Jordan, Lebanon, and Syria sign armistice agreements.” —[Council on Foreign Relations](#)

14 May 1948: The United States was the first nation to recognize Israel as an independent state. Israel proclaimed its independence at midnight 14 May 1948. 11 minutes later US President Harry Truman issued a statement of recognition.

11 December 1948: “**UN addresses Palestinian displacement** Over the course of the Arab-Israeli war, at least seven hundred thousand Palestinian refugees flee their homes in an exodus known to Palestinians as the Nakba, or catastrophe. Israel wins the war, retaining the territory provided to it by the United Nations and capturing some of the areas designated for the Palestinian state. Israel gains control of West Jerusalem, Egypt gains the Gaza Strip, and Jordan gains the West Bank and East Jerusalem, including the Old City and its historic Jewish quarter. In 1948, the UN General Assembly (UNGA) passes Resolution 194, which calls for the repatriation of Palestinian refugees. Palestinians will later point to Resolution 194 as having established a “right of return” for Palestinian refugees and their descendants. The specific parameters of this return are debated in the decades that follow, including among the large number of descendants from the 1948 refugees and the three hundred thousand Palestinians who will flee their homes during the June 1967 war.” — [Council on Foreign Relations](#)

14 October 1953: “The Qibya massacre occurred during Operation Shoshana, a reprisal operation that occurred in October 1953 when Israeli troops under Ariel Sharon attacked the village of Qibya in the West Bank, which was then under Jordan's control, and killed Palestinian civilians.

Israeli forces massacred more than sixty-nine Palestinian villagers, two thirds of which were women and children. Forty-five houses, a school, and a mosque were destroyed. The attack

followed cross-border raids from the West Bank and Israel framed the Qibya massacre as a response to the Yehud attack in which an Israeli woman and her two children were killed.

The act was condemned by the U.S. State Department, the UN Security Council, and by Jewish communities worldwide. The State Department described the raid as “shocking”, and used the occasion to confirm publicly that economic aid to Israel had been suspended previously, for other non-compliance regarding the 1949 Armistice Agreements.” —[Wikipedia](#)

One Israeli soldier was killed and 17 were wounded. 5 June 1967 - 10 June 1967: “**The Six Day War** Israel and several of its Arab neighbors fight the Six Day War. 19 March 1972: “The thesis that the danger of genocide was hanging over us in June 1967 and that Israel was fighting for its physical existence is only a bluff, which was born and developed after the war.” —Israeli General Matityahu Peled, *Ha'aretz*

14 July 1972: “It is the duty of Israeli leaders to explain to public opinion, clearly and courageously, a certain number of facts that are forgotten with time. The first of these is that there is no Zionism, colonization or Jewish State without the eviction of the Arabs and the expropriation of their lands.” —Yoram Bar Porath, *Yediot Aahronot*

3 October 1973: “**The Yom Kippur War** Another Arab-Israeli war, known variously as the Yom Kippur War, the Ramadan War, and the October War, is fought when Egypt and Syria attempt to retake the Israeli-occupied Sinai Peninsula and Golan Heights. Cold War tensions spike as the Soviet Union aids Egypt and Syria and the United States aids Israel. The Organization of the Petroleum Exporting Countries (OPEC) begins an oil embargo on countries that support Israel, and the price of oil skyrockets. The fighting ends after a UN-sponsored cease-fire (negotiated by the United States and the Soviet Union) takes hold. The UNSC passes

1977: Likud Party Original Charter

“The Right of the Jewish People to the Land of Israel (Eretz Israel)

a. The right of the Jewish people to the land of Israel is eternal and indisputable and is linked with the right to security and peace; therefore, Judea and Samaria will not be handed to any foreign administration; between the Sea and the Jordan there will only be Israeli sovereignty.

b. A plan which relinquishes parts of western Eretz Israel, undermines our right to the country, unavoidably leads to the establishment of a “Palestinian State,” jeopardizes the security of the Jewish population, endangers the existence of the State of Israel. and frustrates any prospect of peace.

Genuine Peace-Our Central Objective

a. The Likud government will place its aspirations for peace at the top of its priorities and will spare no effort to promote peace. The Likud will act as a genuine partner at peace treaty negotiations with our neighbors, as is customary among the nations. The Likud government will attend the Geneva Conference. .

b. The Likud governments peace initiative will be positive. Directly or through a friendly state. Israel will invite her neighbors to hold direct negotiations, in order to sign without pre-conditions on either side and without any solution formula invented by outsiders (invented outside).

At the negotiations each party will be free to make any proposals it deems fit.

Settlement

Settlement. both urban and rural. in all parts of the Land of Israel is the focal point of the Zionist effort to redeem the country, to maintain vital security areas and serves as a reservoir of strength and inspiration for the renewal of the pioneering spirit. The Likud government will call on the younger generation in Israel and the dispersions to settle and help every group and individual in the task of inhabiting and cultivating the wasteland, while taking care not to dispossess anyone.

Arab Terror Organizations

The PLO is no national liberation organization but an organization of assassins, which the Arab countries use as a political and military tool, while also serving the interests of Soviet imperialism, to stir up the area. Its aim is to liquidate the State of Israel, set up an Arab country instead and make the Land of Israel part of the Arab world. The Likud government will strive to eliminate these murderous organizations in order to prevent them from carrying out their bloody deeds.” —[Likud Party Original Charter](#)

1 September 1978: “**The Camp David Accords** Israel and Egypt sign the Camp David Accords, which establish a basis for a peace treaty between the two countries. The accords also commit the Israeli and Egyptian governments, along with other parties, to negotiate the disposition of the West Bank and the Gaza Strip.” —[Council on Foreign Relations](#)

26 March 1979: “**Israel withdraws from the Sinai Peninsula** Egypt and Israel sign a peace treaty, the first between Israel and one of its Arab neighbors. The treaty commits Israel to withdraw from the Sinai Peninsula and evacuate its settlements there. The termination of the state of war between Egypt and Israel leads to the normalization of diplomatic and commercial relations between the two countries. Israel’s prime minister and Egypt’s president exchange letters reaffirming their commitment—outlined in the Camp David Accords—to negotiate the disposition of the West Bank and the Gaza Strip.” —[Council on Foreign Relations](#)

1982: “In 1982 Haig lost Reagan’s confidence when he assured him that the ongoing Israeli invasion of Lebanon was limited to securing a safe zone in the southern part of the country. By June, Israeli troops under Ariel Sharon’s leadership had reached Beirut. Reagan accepted Haig’s resignation on June 25, 1982, confiding in his diary that “this has been a heavy load.”

Schultz, the new secretary of state, inherited a tumultuous situation. Reagan, who had considered Israel a trustworthy ally, was disgusted with that was happening in Lebanon. Israel’s 10-week siege culminated with its planes bombing West Beirut for 11 consecutive hours on Aug. 12. At Deaver’s suggestion, Reagan called Israeli prime minister Menachem Begin. “Menachen, this is a holocaust,” Reagan said.

“Mr. President, I think I know what a holocaust is,” Begin replied in a sarcastic voice.

Reagan refused to give ground, bluntly telling Begin he had to stop the bombing. Twenty minutes later Begin called back, saying he had ordered Sharon to halt the attacks. Reagan thanked him, hung up and said to Deaver, “I didn’t know I had that kind of power.” ” —[Not voting for genocide Joe](#)

13 September 1993: “**The Oslo Accords** Secret negotiations in Norway result in the Declaration of Principles on Interim Self-Government Arrangements, also known as the Oslo Accords. Before the accords are signed, Israel and the PLO recognize each other in an exchange of letters. Israel and the PLO agree to the creation of the Palestinian Authority to temporarily administer the Gaza Strip and West Bank. Israel also agrees to begin withdrawing from parts of the West Bank, though large swathes of land and Israeli settlements remain under the Israeli military's exclusive control. The Oslo Accords envision a peace agreement by 1999. Palestinian leader Yasir Arafat, Israeli Prime Minister Yitzhak Rabin, and Israeli Foreign Minister Shimon Peres win the Nobel Peace Prize in 1994 for their efforts on the Oslo Accords.” —[Council on Foreign Relations](#)

9 August 2012: “U.S Rep. Joe Walsh went on another anti-Islam tirade Wednesday, calling for an end to “political correctness” in dealing with the “radical strain of Islam” he described as an imminent danger to America.

“It’s a real threat,” Walsh said at a town hall meeting in Elk Grove Village, Ill. “And it’s a threat that is much more at home now than it was right after 9/11.”

“It’s here,” he continued, referring to “radical Islam” in the suburbs of Chicago. “It’s in Elk Grove, it’s in Addison, it’s in Elgin. It’s here.”

The remarks -- captured on tape -- came in response to an Egyptian-American audience member who said Muslims are taking over America and charged the freshman congressman to take a more aggressive stance against the religion.

“I’m looking for some godly men and women in the Senate, in the Congress, who will stand in the face of the danger of Islam in America without political correctness,” the man said “Islam is not the peaceful, loving religion we hear about.”

The line was met with applause.

Walsh responded by asserting that radical Muslims are “trying to kill Americans every week,” and that “it’s not a matter of ‘if’ and it’s a matter of ‘when’” a 9/11-like attack will happen again.

“All I can tell you about the ‘when’ is, the people who would want to do this to America are trying to get their hands on weapons that will make 9/11 look like child’s play.”

Added Walsh: “So we had better be alert to this. And as [the audience member] said ... ‘Enough with political correctness!’”

The crowd, which was mostly white, applauded.

“Can you say ‘Fort Hood’?” Walsh continued, referring to the 2009 shooting at the Texas military base that left 13 dead and 29 wounded. A report concluded the shooter, Nidal Malik Hasan, was a homegrown terrorist.

“Your government was so afraid of doing its job, so afraid of offending Islam, that right in front of our noses, they saw what was happening at Fort Hood and because the government’s politically correct, Americans died.”

1 April 2016: “Palestinian requests to convert to Judaism rejected automatically
Rabbi Yitzhak Peretz, director of the Israeli government’s Conversion Authority, made the statement earlier this week, according to NRG.

Israel’s authority handling conversions to Judaism rejects Palestinian applicants without review because of their ethnic origin, its head said.

Rabbi Yitzhak Peretz, director of the Israeli government’s Conversion Authority, spoke about his organization’s handling of requests by Palestinians to convert on Tuesday during a discussion on conversions at the State Control Committee of the Knesset, the Israeli parliament, the news site NRG reported.

To initiate an officially recognized conversion to Judaism in Israel, foreigners need to apply to the special cases panel of the Conversion Authority.

“The threshold requirements” to be considered by the special cases panel, he said, “are that applicants be sincere and that they are not foreign workers; infiltrators; Palestinian or illegally in the country.” In 2014, he added, the special cases committee received 400 applications. “Half of the applicants were accepted, the rest were rejected as foreign workers, infiltrators, illegal stayers and Palestinians,” he said.

Conversions to Judaism by Palestinians are rare in Israel.

Israel’s Declaration of Independence, which is the legal basis for the country’s basic laws - a set often referred to the equivalent of Israel’s constitution - ensures “absolute social and political equality to all its citizens regardless of faith, race and gender.”

The Israeli government fears that Palestinian attempts to convert to Judaism would be a covert form of realizing “the right of return,” which is demanded by Arabs who were forced to flee or fled their former homes and lands in pre-state Israel just before the state’s founding.” —[The Jerusalem Post](#)

12 July 2016: “Outgoing chief rabbi, Brig. Gen. Rafi Peretz, of the Israeli Defense Forces, who is stepping down after six years in the position is being replaced. And, his successor, Rabbi Col. Eyal Karim’s appointment is being met with backlash — as he is outspoken for allowing soldiers to rape women during wartime.

Karim, who was announced on Monday as the intended new IDF chief rabbi, has provoked controversy with previous misogynistic statements, such as opposing female conscription and implying that rape was permissible in times of war.

According to *Ynet News*, Karim has been serving as the head of the Rabbinate Department in the Military Rabbinate. He is an alumnus of the Bnei Akiva Nachalim and the Ateret Cohanim yeshivas, and he served previously as a combat paratrooper, eventually commanding their elite reconnaissance unit, before taking a break from the military and eventually returning to its rabbinate.

In 2012, Karim’s controversy started when the Hebrew religious website KIPA, asked him, in the light of certain biblical passages, if IDF soldiers were permitted to commit rape during wartime despite the general understanding that such an act is widely considered repugnant.

His answer enraged many Israelis.

“Although intercourse with a female gentile is very grave, it was permitted during wartime (under the conditions it stipulated) out of consideration for the soldiers’ difficulties,” he wrote. “And since our concern is the success of the collective in the war, the Torah permitted [soldiers] to satisfy the evil urge under the conditions it stipulated for the sake of the collective’s success.”

In other words, soldiers can rape innocent women during times of war in order to keep their morale up.

The head of the Knesset Committee on the Status of Women and Gender Equality, MK Aida Touma-Sliman (Joint Arab List), said, “Col. Karim’s ruling on permitting raping non-Jewish women is similar to the fatwa of a murderous organization that’s not so far from Israel’s borders. I will contact the attorney general and oppose the appointment, and I call on female and male members of Knesset to join my request.”

The chairperson of Na’amat — Movement of Working Women & Volunteers, Galia Wolloch, said, “Anyone who thinks that rape is okay as a morale-booster for soldiers, so long as it’s of gentile women, cannot lead the army to good moral and spiritual places.”

When he is not advocating for the rape of women, Karim is outspoken about refusing to allow women in the IDF.

Karim wrote in 2002 that it was explicitly forbidden.

“In a situation such as the one during the War of Independence, in which there was a real *Épikuah nefesh* [matter of life or death] of the Jewish people, women also participated in the defense of the nation and country, even though the situation was not so modest,” he wrote. “But in our era, we do not live with a real threat to our survival.

“And because of the liable damage to the modesty of the girl and the nation, the great rabbis and the Chief Rabbinate have ruled that the enlistment of girls to the IDF is entirely forbidden.”

Karim is also outspoken about women singing at military events. If a woman sings at an event, he claims, men should not have to attend as it is repugnant.” —[Mint Press](#)

24 May 2018: “Israel's Supreme Court on Thursday rejected a legal challenge to the military's rules on when soldiers can fire their weapons amid weeks of violent protests that have killed dozens of Palestinians on the border with Gaza.

Six human rights groups had asked the court to declare as unlawful any regulations that allow soldiers to open fire at unarmed civilians.

But in its unanimous ruling, the court sided with the Israeli military, which argued that the protests were taking place in the context of a long-running armed conflict with the Islamic militant group Hamas which rules Gaza and that weapons-use regulations are subject to the rules of armed conflict. Such rules provide greater leeway for the use of lethal force than those governing law enforcement practices.

Yesh Din, one of the rights groups that brought the challenge, slammed the court's decision.

“The judges missed an opportunity to prevent the continuation of the killing and injuries,” the group said on Twitter.

Israeli fire has killed more than 100 Palestinians in weeks of violent protests along Israel's border with the Gaza Strip. Nearly 60 of those were killed May 14, the deadliest protest day that also saw hundreds of Palestinians wounded.

Organizers said the protests were meant in part to break a decade-old Israeli-Egyptian blockade on the Gaza Strip. But Israel, which has faced blistering international criticism over its response, accuses Hamas of using the weekly border protests as cover to stage attacks.

The Israeli army has defended its actions. It points to the violent history of Hamas, says there have been shootings and bombing attacks against its forces, and fears a mass border breach.

22 May 2023: “Converting to Judaism in Israel is nearly impossible - ITIM report

The number applying for conversion in the last decade has been low but even among those who did apply, fewer than half were able to complete the process.

Ahead of Shavuot, the Jewish holiday that highlights conversion, a study released Monday shows that more than 500,000 Israeli citizens defined as “irreligious” Jews find that the conversion system in Israel prevents them from converting.

During Shavuot, the Book of Ruth is read in synagogues about Ruth, the most famous and significant convert to Judaism.

According to the annual conversion report by the nonprofit advocacy organization ITIM and the Menomadin Center for Jewish and Democratic Law, the number of people applying for conversion in the last decade has been low, but even among those who did apply and attended the conversion preparation courses, fewer than half were able to complete the conversion process successfully.

If they actually are accepted for conversion by the Chief Rabbinate, receipt of the conversion certificate, which culminates the process, may be delayed for many months, the report said.

ITIM and the Menomadin Center for Jewish and Democratic Law at Bar-Ilan University, which published their first planned annual report on the conversion system, cited a series of failures in the implementation of the process.

Even though conversion is one of the most contentious issues in Israeli Jewish society, “the conversion system continues to make it difficult for converts and thus distances those considered as Zera Israel [seed of Israel, those who are not halachically Jewish, having no Jewish mother, but who have Jewish ancestry, such as a Jewish father] from the people of Israel,” the report said.

According to the study, which examined the conversion system data, it appears that it failed in its main purpose, “to make conversion accessible to those interested in it.”

“Instead of recognizing the huge national challenge of half a million citizens who feel Jewish and live as Jews, but are not [Jewish] according to Halacha, the Chief Rabbinate adopts rigid and strict halachic approaches, which distance it from potential converts,” the report said.

“Instead of adopting acceptable halachic approaches, which acknowledge them as Zera Israel [and therefore of a different status than gentiles], the rabbinate’s conduct results in fewer than

4,000 people applying each year to the conversion system and fewer than 2,000 successfully completing the procedure,” it said.

According to data provided by government ministries, 3,904 cases were opened in 2022, representing an increase of about 45% over the past nine years and an increase of more than 60%, compared with 2019.” —[The Jerusalem Post](#)

the day before

6 October 2023: You will hear claims that there supposedly was a cease fire prior to 7 October 2023. A Jewish settler shot and killed 19 year old Palestinian university student Labib Dumaidi during a settler attack in the town of Huwara in the occupied West Bank. The settler attack was a combination of the IDF and civilians. If you point out that one death is a small number compared to the number of Israelia and Palestinian deaths the next day, you are missing the point that this is a continuous war and it did not emerge from rainbow-colored peace with no past violence and as action without any possible provocation.

Sources:

“Residents said a group of settlers had erected a tent in Huwara, held prayers and later marched through the town. Some of them were carrying arms and began vandalising shops and cars, they said.

One of the settlers shot university student Labib Dumaidi, who later died of his wounds in hospital, the residents said.

The Israeli military, offering a different account, said its forces fired at a Palestinian who had hurled a brick at an Israeli vehicle during clashes between dozens of settlers and townspeople. It said the suspect was struck by gunfire but did not elaborate on his identity.

Violence again erupted later on Friday when hundreds of people attended Dumaidi’s funeral under the watch of Israeli soldiers.

The Palestinian Red Crescent said at least 51 Palestinians were wounded in clashes with the military during the funeral, mostly from tear gas and rubber-tipped bullets and three from live fire.

In testimony Israeli human rights group Yesh Din collected from Dumaidi’s family, relatives said he had been shot in the chest while standing on the roof of their home trying to ward off settlers who were hurling rocks at the house and vandalising the family’s car.

The Palestinian Foreign Ministry condemned Dumaidi’s killing as a “heinous crime” and called for international intervention to stop armed settler militias.

In a statement, UN Special Coordinator for the Middle East Peace Process, Tor Wennesland, said he was “outraged by the continued incitement, provocations, and lack of accountability” for settler violence.

“It’s clear that the settler militias are protected by the occupation’s soldiers,” said

Thaer Qawareeq, an employee at a supermarket damaged by the settlers, as his colleagues cleaned the pavement of glass shards. “This is the third time settlers shatter the supermarket’s glass exterior.”

Israeli Finance Minister Bezalel Smotrich, who also holds some West Bank powers, said that Israel must take firmer action against Palestinian militants “to save lives and reinstate security.” Smotrich added that he was committed to further developing Jewish settlements, which most countries deem as illegal.

In the first eight months of 2023, an average of three settler-related incidents occurred per day, the highest daily average of settler-related incidents affecting Palestinians since the United Nations started recording this data in 2006.

Huwara is surrounded by settlements that cut off Palestinians from each other and from their land. “Labib Dumaidi, 19, was shot in the heart by an Israeli settler, the Palestinian Ministry of Health said on Friday.

Relatives said he had sought refuge on the roof of his home, which was under assault from settlers, when a settler shot him.

The Israeli military has offered a different account, stating that a suspect was shot after throwing a brick at a vehicle, but offering no details on the victim’s identity.

“More than 200 settlers gathered in the middle of Huwara after midnight, shouting and dancing, some of them with covered faces,” Palestinian resident Abderrahman Dmidi told the news agency AFP.

“They began throwing stones towards some houses, and then the young people ... tried to defend their homes by throwing stones,” he added. Residents said Israeli soldiers turned a blind eye to the violence.

“It’s clear that the settler militias are protected by the occupation’s soldiers,” Thaer Qawareeq, an employee at a supermarket damaged by the settlers in Huwara, told the Reuters news agency. He added that it was the third time that settlers had assaulted the store.

The killing of Dumaidi, a university student, has come amid a rise in settler violence against Palestinians in the West Bank, including instances of mob violence targeting Palestinian towns and residents, often in the presence of Israeli soldiers. Some of the assaults have followed attacks by Palestinians on Israeli settlements and settlers.

The attack on Friday came a day after a Palestinian gunman shot at an Israeli car in Huwara. The town is located on a road between the Palestinian cities of Nablus and Ramallah and is surrounded by Israeli settlements, which are illegal under international law.

The Palestinian Foreign Ministry condemned Dumaidi’s killing as a “heinous crime”

The Palestinian Red Crescent reported that at least 51 Palestinians were injured during a funeral procession for Dumaidi, as Israeli forces fired tear gas, rubber-tipped

bullets, and live fire.

Huwara itself has been the scene of some of the most notable recent cases of settler violence: following the slaying of two Israeli brothers by a Palestinian in February, a mob of right-wing settlers rampaged through the town, firing weapons and killing a 37-year-old man.

Israel's far-right Minister of Finance Bezalel Smotrich aroused controversy when he commented that Huwara should be "wiped out" several days after." — [Al Jazeera](#)

summary of 7 October:

The Official Story Of October Seventh

The official story is that on October 7, 2023, thousands of evil Hamas terrorists broke out of their walled-in enclave and killed approximately 1,200 Israelis for no reason other than because they were evil and wanted to kill Jews. Nothing was done by the Israeli government to provoke this attack, and nothing of any relevance happened prior to this date.

The attack was as undefended as could possibly be; Israeli defense forces did not respond for nine hours despite having received ample warning that an attack was coming for months, from both their own intelligence services and from Egyptian intelligence. No attempt was made to warn the Nova music festival of an impending attack despite Israeli security forces being aware the day before that an attack was coming, resulting in hundreds of deaths and captured hostages. The attack was met with so little resistance that Hamas themselves were reportedly surprised by how many Israelis they were able to capture and kill, their surprise perhaps due to the fact that they'd spent two years training right out in the open less than a mile from the border for an air, sea and land attack using motorized paragliders, drones and motorboats. This is all perfectly normal and not suspicious at all.

Also not at all suspicious is the fact that 100 percent of the 1,200 Israeli deaths on October 7 are being attributed to Hamas despite Israeli media and eyewitness testimony reporting that the IDF was firing indiscriminately into areas full of Israelis. The burned bodies you see in photos of the October 7 devastation were with absolute certainty burned by Hamas, despite the Israeli government's acknowledgement that it had previously misidentified hundreds of dead Hamas fighters as Israeli because they'd been so badly burned by IDF fire that their corpses were unrecognizable.

(The official story of October 7 also previously included narratives about beheaded babies, babies cooked in ovens, and babies ripped from the wombs of pregnant mothers, and you were an evil Jew-hating Holocaust denier if you doubted them, but those narratives have since been walked back and are no longer part of the official story, so belief in them is now optional.)

The murder of 1,200 Israelis was so evil and egregious that it has warranted the killing of more than 16,000 Palestinians in Gaza, including more than 7,000 children. It will likely warrant the killing of far more, because Israeli lives are worth much, much more than Palestinian lives. Only a racist Nazi would believe that Palestinian lives matter.

Israel is not to blame for any of the killings in Gaza anyway, because Hamas is using civilians as human shields. It is anti-semitic to ask how Israel has managed to kill so many human shields while killing astonishingly few Hamas fighters and dealing no meaningful damage to Hamas leadership in the process.

Now that 1.7 million Gazans have been displaced and they are being shoved toward the Egyptian border, it is perfectly fine and normal to be seeing official agendas being pushed by Israeli officials and thought leaders to “thin out” Gaza’s population and relocate them to other countries. Only an evil terrorist supporter would call this ethnic cleansing; one ought to think of it more as a permanent vacation.

If you question any part of this official story, you’re an evil Jew-hating monster who loves terrorism and wishes Hitler had won. You should be censored, fired from your job, kicked off campus and disappeared from polite society, because you support genocide and you want good people to die.

Does this make you feel like you’re going crazy? Good. That means it’s working. That means the official story is taking root in your mind. Let it blossom and bloom inside of you. Stop struggling. Relax. The more you struggle, the more it will hurt. Just let your mind go blank and obey. This will be over before you know it.—as told by [Caitlin Johnstone](#) on 6 December 2023

7 October 2023: “**Hamas launches surprise attack on Israel** Israel faced domestic turmoil over government moves to overhaul the judiciary, all while 2022 marked a renewed level of violence between Israelis and Palestinians. The first nine months of 2023 were characterized by a steady trend of clashes in the West Bank.

On October 7th, 2023, Hamas launched an unprecedented surprise attack on Israel, leading to an explosion of violence. According to Israeli Media, the initial strikes of the conflict led to at least 250 people killed and 1,500 injured in Israel, making it the deadliest attack in the country in decades. The Palestinian Health Ministry, in turn, reported that 232 people in the Gaza Strip were killed and 1,700 wounded in Israeli strikes.

Hamas’s military leader, Mohammed Deif, said the group undertook its assault because of Israel’s long-running blockade of Gaza, its occupation of Palestinian lands, and its alleged crimes against Muslims, including the desecration of the Al-Aqsa Mosque in Jerusalem. Israel’s Prime Minister Benjamin Netanyahu, in turn, responded by announcing that Israel was at war with Hamas. 10 October 2023: “*Statement by Martin Griffiths, Under-Secretary-General for Humanitarian Affairs and Emergency Relief Coordinator, about the situation in Israel and the Occupied Palestinian Territory*

The scale and speed of what’s unfolding in the Occupied Palestinian Territory and Israel is bone-chilling.

Hundreds of Israelis have been killed and thousands have been injured. Scores are being held captive, facing appalling threats to their lives. Thousands of indiscriminate rockets have been launched into Israel.

In densely populated Gaza, hundreds of Palestinians have been killed and thousands have been injured in intense bombing. Homes, health centers and schools

sheltering displaced families have been hit. The whole city is now under a siege order.

My message to all sides is unequivocal: The laws of war must be upheld.

Those held captive must be treated humanely. Hostages must be released without delay.

Throughout hostilities, civilians and civilian infrastructure must be protected. Civilians must be allowed to leave for safer areas.

10 October 2023: “Last post on this topic to answer all the questions I’ve been asked over and over today

1. It is stunning to me how little most people know about the treatment of the Palestinian people. Over 2 million people packed into 140 square miles in Gaza. Robbed of their land and housing over and over. We’re talking real David VS Goliath sh*t here. David has been taking Ls for years. They are very desperate.

2. What Hamas did is pure evil. Those responsible deserve whatever is coming for them. That does not justify atrocities against non-combatants. 50% of the Gaza population are kids. No joke. Remember that when you talk about turning it into glass.

3. If you are unaware of item 1 above then you probably think their hatred of Israel is based entirely on religious dogma. It’s not. They are in an open-air prison with over 50% unemployment. They are destitute.

4. Israel provides water, food and electricity to the Palestinians for the same reason Rikers Island does: control over the prison population. Don’t take my word for it, look into it. It’s awful. Calling it charity is a really twisted way of viewing things

5. I’m not going to pretend to know what the long term solution for peace is. After the attacks by Hamas, I fear their fates are sealed. The IDF is likely going to flatten Gaza killing an insane amount of innocent people and displacing a million more. I have no clue where they will go.

6. I will never celebrate the death of innocents. To the thousands of people that have responded to me, describing paelestinians, including the over 1 million KIDS, as subhuman and worse: you’re sick. You need help. You make me fear for humanity’s future. Sincerely.

7. I am still very suspect that the IDF allowed for this attack to justify what comes next. Idk for sure, no one does, but they need to answer for that security failure. It makes no sense.

8. I have nothing but love for the Palestinian and Israeli people. For their governments, not so much.

9. Above all I am a non-interventionist. America cannot win a world war. No one can as it’ll likely go nuclear. But America is in steep decline and this would be the end. I pray it can be avoided. This can escalate out of control so insanely fast given that there are 4-5 potential fronts already on the table. It risks the end of all life on earth, no exaggeration. People are way too flippant about what’s happening.

10. Iran uses Palestine as a proxy. Israel attacks Iran at will. The CIA attacks every one of their neighbors. Islam does have a problem with radicalism. That radicalism is also understandable given what has been done to them. My belief is that the US needs to STOP intervening and let them all sort it out. Israel also has a problem with a supremacy worldview paired with a martyrdom complex. That complex is also understandable given what they've had to live thru.

In short, everyone has some valid justifications for their actions. Also, everyone involved has committed heinous acts. It requires our better nature to shine thru if there is to ever be a lasting peace. Forgiveness is probably not on the table but dear god do we need to seek it. That is all I've tried to call for today...

Peace and non-intervention
and if you're religious: prayer

Love to everyone in harms way including my Israeli and Palestinian brothers. May you walk in God's path and not one of vengeance.

Lastly, the political class in America is undoubtedly going to capitalize on this trauma. They are going to use your sympathy to strip you of further liberty. Reject it. They will use your better nature to justify further bloodshed. Reject it. Do not trust them. The war on terror should've taught us all that lesson, please remember what they did to you when you were at your lowest. These people are evil.

11 October 2023: **"Israeli official calls for 'doomsday' nuclear strike on Gaza that will 'shake Middle East'**

Right-wing Israeli lawmaker Revital "Tally" Gotliv called for the use of "doomsday" force in Gaza after Hamas launched a terrorist attack that killed at least 1,200 Israelis.

An Israeli lawmaker has called for a nuclear strike in the Gaza Strip after Hamas launched a massive terrorist attack over the weekend.

Revital "Tally" Gotliv, a member of the right-wing Likud party in Israel's Parliament the Knesset, has called on social media for Gaza to be wiped off the map.

Israel has the most formidable military in the Middle East and is widely thought to be a nuclear power possessing as many as 400 nuclear weapons. Israel's Government does not openly comment on its nuclear program but several politicians have alluded

to the weapons in the past.

Since Saturday, when Hamas launched a ruthless attack that killed at least 1,200 Israelis including women and children, Israel has declared war on the terrorist group and promised widespread destruction in Gaza. Preparations for a ground invasion appear to be underway.

In one message posted to Twitter in Hebrew, Gotliv said: “Jericho Missile! Jericho Missile! Strategic alert. Before considering the introduction of forces. Domsday weapon! This is my opinion. May God preserve all our strength.”

Jericho missiles are a family of ballistic missiles developed by Israel in the 1960s. Gotliv urged the IDF to “shell Gaza mercilessly!”

She added: “Only an explosion that shakes the Middle East will restore this country’s dignity, strength and security. I urge you to do everything and use Domsday weapons fearlessly against our enemies.”

She said destroying neighborhoods in the Gaza Strip would not be enough adding the Israeli Government must “crush” the enclave home to 2.2 million people.

Following the attack by Hamas, Israel’s Armed Forces have launched hundreds of airstrikes dropping entire apartment blocks the IDF says were linked to Hamas.

Now, around 300,000 Israeli reservists have massed at the Gaza border along with artillery, tanks and infantry fighting vehicles in what appears to be preparation for a ground offensive.Ê

Israel’s Defense Minister has ordered a “complete siege” of Gaza blocking food shipments, water and fuel from entering the area governed by Hamas.

There have been reports that Gaza’s only domestic power station is on the brink of running out of fuel which would leave Gaza in darkness.

11 October 2023: “In a historic, impassioned speech expressing unbridled U.S. support for Israel on Tuesday, President Joe Biden listed among the atrocities Hamas had committed that women “were raped, assaulted, paraded as trophies.”

A White House spokesperson told the *Forward* that this assertion was based on a phone call earlier that day in which Prime Minister Benjamin Netanyahu had told Biden that Israeli women had been “brutally raped and murdered.” Similar characterizations have been included in condemnations of Hamas by columnists, celebrities and editorial boards.

But the source of the rape allegation remains murky. While sexual assault is a common feature of violent conflict worldwide, the Israel Defense Forces told the *Forward* Tuesday night that it does not yet have any evidence of rape having occurred during Saturday's attack or its aftermath. And most mainstream media outlets have avoided mention of rape, with the *Los Angeles Times* and NBC News specifically stating they have been unable to verify the claims.

"It's important to distinguish between claims that are false and claims that are not verified yet," noted David Broniatowski, an expert on social media at George Washington University. "If what you conclude is, 'Well I'm not sure, this is unverified,' think about the social consequences of sharing."

Disinformation experts have criticized X, the website formerly known as Twitter, for failing to moderate content about the conflict, including allowing graphic videos of the Hamas attack to circulate over the weekend.

A White House official said Wednesday morning that Biden had based his comments off both his phone call with Netanyahu and an article in *The Times of Israel* that referenced videos circulating on social media that "have raised concerns of sexual assault against women." The official, speaking on the condition of anonymity, noted that the president had described the rape allegations as "stomach-turning reports," not verified facts.

"These are people, as you've been reporting and others have seen, that deliberately targeted teenage girls, women and children, the elderly, not just for rape and murder but then dumping their bodies off on the streets of Gaza," Sen. Marco Rubio, a Florida Republican, said Monday on CNN. "Just horrifying things."

Meanwhile, the *Los Angeles Times* removed references to rape from a column published Monday, adding a note that said "such reports have not been substantiated." And when NBC News posted a video of Netanyahu stating that women had been raped, it superimposed a disclaimer stating that it had not confirmed his assertion.

The author of the *Times* column, Jonah Goldberg, did not respond to a request for comment Wednesday. A spokesperson for the newspaper, Hillary Manning, said, "We don't wish to comment beyond what is stated in the correction."

Asked about the rape allegations following Netanyahu's remarks, an IDF spokesperson said, "We can't officially confirm any of that yet."

The reports of sexual assault appear to have several roots amid the scattered media accounts of the violent chaos in southern Israel after Hamas militants breached the border fence in a surprise attack that killed more than 1,200 Israelis.

Liel Leibovitz, a right-wing columnist for the online Jewish magazine *Tablet*, published an article Sunday based on interviews with unnamed survivors of the Hamas massacre at the desert music festival near the Gaza border. Emergency responders estimated that more than 200 young people were killed there and an untold number kidnapped.

"Women have been raped at the area of the rave next to their friends' bodies, dead bodies," Leibovitz quoted one attendee saying. The person did not say they had witnessed these incidents, and at one point was recounting videos they had seen on

social media.

“Several of these rape victims appear to have been later executed,” Leibovitz wrote, without citing a specific source. “Others were taken to Gaza. In photographs released online, you can see several paraded through the city’s streets, blood gushing from between their legs.”

The *Tablet* article did not, however, include specific photos. Two videos circulating online over the weekend were also being used as evidence of sexual assault, although neither precisely matched Leibovitz’s description.” —[Forward](#)

Quoted from the [Frankfurter Allgemeine](#):

In view of the terrorist attack on Israel, the Berlin public prosecutor’s office and police want to take stricter action against anti-Israel slogans at demonstrations by palestinian groups. The use of the oft-used slogan “From the River to the Sea, Palestine will be free” is now being classified as a criminal offense by the public prosecutor’s office, a police spokeswoman told the German Press Agency on Friday. The sentence means that there should be a free Palestine in an area from the Jordan River to the Mediterranean – where Israel is now located. During demonstrations, corresponding maps show the area completely green, the color of Islam.

The public prosecutor’s office sees the slogan as an initial suspicion of sedition because it affects Israel’s right to exist, said the spokeswoman. The corresponding paragraph 130 states that anyone who incites hatred or calls for violence or arbitrary measures against “national, racial, religious or ethnic groups” will be punished. Slogans such as “Death to the Jews” have long been banned under the law. Other slogans that attack Israel, however, are permitted as expressions of opinion.

13 October 2023 [unconfirmed]: “I am proceeding cautiously because of what @charliekirk11 describes here.

The Israel-Gaza border is one of the most secure borders on the planet, Israel/US have some of the best intelligence on the planet, Iron Dome went down, and Israel were warned an attack might happen.

Combine this with how quickly Israel escalated and seemingly eager to remove not just Hamas, but the entire Palestinian population from Gaza.

Israeli intelligence also seem to be back working all the sudden after ignoring warnings from Egypt and failing to stop the Hamas attacks. They went from not having any idea what’s going on, to dropping air strikes all over supposed Hamas positions, taking out over 1,900 Palestinian civilians along the way (according to UN).

Cui bono? Who stands to gain from this? Certainly not Hamas or Palestine. But Israel now have the unwavering support to bomb Palestine, Syria, Lebanon, civilians,

whatever the hell they want. If Israel wanted an excuse to take control of Palestinian land, it would behoove them to let an attack like this happen.

Same concept as 9/11.

Then you take into account the already massive amounts of atrocity propaganda. The beheading babies hoax significantly influenced the emotions of the world, and helped Israel convince the public that their coming response is justified, no matter how many civilians they killed with collateral damage. They have convinced much of the American public that all Palestinians are subhuman savages that deserve to be exterminated, even the children. All based on WILDLY exaggerated claims that have since been debunked. But the damage is already done.

All of these happenings are the textbook precursors to genocide, and it appears that it has already begun, and many Americans are cheering it on.

14 October 2023: **“It’s been a dreadful week. Humanity must prevail.**
Statement by Martin Griffiths, Under-Secretary-General for Humanitarian Affairs and Emergency Relief Coordinator, about the latest in Israel, the Occupied Palestinian Territory and the region

Civilians in Israel and the Occupied Palestinian Territory are suffering from a week of utter anguish and devastation. I fear that the worst is yet to come.

In Israel, families are reeling from the horror of last Saturday's attack. More than a thousand people have been killed and many more have been injured. Over 100 people are held captive.

In Gaza, families have been bombed while inching their way south along congested, damaged roads, following an evacuation order that left hundreds of thousands of people scrambling for safety but with nowhere to go.

Nearly 2,000 people have been killed and many more have been injured.

There is no power, no water and no fuel. Food supplies are running dangerously low.

Hospitals, overwhelmed with patients, are running out of medicine.

Morgues are overflowing.

Homes, schools, shelters, health centers and places of worship are under intense bombardment.

Entire residential neighbourhoods have been razed to the ground.

Aid workers have been killed.

The humanitarian situation in Gaza, already critical, is fast becoming untenable.

In the West Bank, violence is on the rise, with a surge in civilian deaths and injuries. Families are facing ever greater movement restrictions.

And in Lebanon, the risk of the conflict spilling into the country is a major concern.

The parties' actions and rhetoric over the past few days are extremely alarming and unacceptable.

Even wars have rules, and these rules must be upheld, at all times, and by all sides.

Civilians and civilian infrastructure, including humanitarian workers and assets, must be protected.

Civilians must be allowed to leave for safer areas. And whether they move or stay, constant care must be taken to spare them.

Essential supplies and services and unimpeded humanitarian access must be allowed.

Anyone held captive must be treated humanely. All hostages must be released.

All countries with influence must exert it to ensure respect for the rules of war and to avoid any further escalation and spillover.

The past week has been a test for humanity, and humanity is failing.” —[Martin Griffiths](#), The official Twitter account of the UN Under-Secretary-General for Humanitarian Affairs and Emergency Relief Coordinator

14 October 2023: “Across the Gaza Strip, more than 2 million people are at risk as water runs out.

“It has become a matter of life and death. It is a must; fuel needs to be delivered now into Gaza to make water available for 2 million people,” said Philippe Lazzarini, UNRWA Commissioner-General.

No humanitarian supplies have been allowed into Gaza for a week now.

Clean water is running out in the Gaza Strip, after its water plant and public water networks stopped working. People are now forced to use dirty water from wells, increasing risks of waterborne diseases. Gaza has also been under an electricity blackout since 11 October, impacting the water supply.

At the UN base in the southern Gaza Strip - where UNRWA has moved its operations- drinking water is also running out. Thousands of people have sought refuge there after Israel issued a warning to residents demanding them to leave their homes in the northern parts of the Strip.

Only in the past 12 hours, hundreds of thousands of people have been displaced. The exodus continues as people move to the southern parts of the Gaza Strip. Nearly 1 million people have been displaced in one week alone.

“We need to truck fuel into Gaza now. Fuel is the only way for people to have safe drinking water. If not, people will start dying of severe dehydration, among them young children, the elderly and women. Water is now the last remaining lifeline. I appeal for the siege on humanitarian assistance to be lifted now,” added Lazzarini.”

14 October 2023: “There is gas on the coast of Gaza. According to a news article⁵, there is a natural gas field called Gaza Marine that lies about 30 kilometers west of the Gaza coast. It was discovered in 2000 by British Gas and is estimated to contain more than 1 trillion cubic feet of natural gas⁵. However, the extraction of this gas has been delayed due to political and security reasons, as well as disputes between Israel and the Palestinian Authority over the ownership and revenue sharing of the gas⁵.

There is also another gas field near Gaza, called Tamar, that is located off the coast of Israel. It is run by US energy company Chevron and supplies 70% of Israel’s energy needs for power generation⁴. However, this gas field was shut down on Monday (October 9, 2023) by Israel’s Ministry of Energy due to safety concerns amid the

ongoing conflict with Hamas⁴. This could affect the gas exports from Israel to its neighbors Egypt and Jordan, as well as the global gas market^{4 2}.

Because what Greta is doing, that she is now showing solidarity with Gaza while not saying a word about the massacres of Israelis, shows that she is actually not in favor of the Palestinians, but that she is sweeping the terror of the Palestinians or Hamas and Islamic Jihad under the table as if it did not exist.” —Arye Sharuz Shalicar, spokesman for the Israeli army

20 October 2023: “Finish them.

We have three priorities when we look at Israel: Support Israel with whatever they need whenever they need it. Eliminate Hamas, not weaken them — eliminate Hamas. And do everything we can to bring our hostages home.

But let me tell you what I told the Biden administration today: Don’t fall for it. ... They are doing this to earn favor with America because they want to try and look good in the eyes of America. Don’t fall for it.

Don’t ever let America be so arrogant to think that we don’t need friends. We need friends. We needed them on September 11. We may need them again. Let’s have the right friends.

27 October 2023: Moussa Abu Marzouk, a member of Hamas’s political bureau, was interviewed on Russia Today’s Arabic channel.

The Israeli government and press are claiming “Top Hamas official declares group is not responsible for defending Gazan civilians” and “Moussa Abu Marzouk says vast underground tunnel network is for the protection of the terror group’s members [or sometimes they just say “terrorists”], while civilians should be taken care of by the UN and Israel”.

It may come as no surprise to those who aren’t Israeli that Marzouk didn’t actually call Hamas terrorists or the terror group.

So, what did Marzouk actually say?

“We built the tunnels because we have no other way of protecting ourselves from being killed in airstrikes. We are fighting from inside the tunnels.”

“Everybody knows that 75% of the people in the Gaza Strip are refugees, and it is the responsibility of the United Nations to protect them.”

It is true that conditions imposed by the government of Israel on Gaza have required international refugee aid for Palestinians be provided by the UNRWA since 1 May 1950 (Israel claims that the war started for no reason at all on 7 October 2023).

“According to the Geneva Convention, it is the responsibility of the occupation to provide them with all the services as long as they are under occupation.”

It is true that international law requires that an occupying military provide essential services to the civilians.

6 November 2023: “The ten dumbest things we're being asked to believe about Gaza:

1. That Israel had no idea what Hamas was up to prior to October 7, but ever since October 7 has known about every hospital, mosque, school, refugee camp and water tower that Hamas is hiding in.

2. That the blame for all of the deaths caused by Israeli weapons launched by Israel rests solely on Hamas.

3. That Hamas is using “human shields”—meaning Hamas bases are hidden amidst civilian populations—yet Israel is managing to kill thousands of civilians without doing any meaningful damage to Hamas.

4. That it would be perfectly fine to murder children by the thousands even if they were being used as “human shields”—as though resolving a hostage situation by mowing down thousands of child hostages would be regarded as reasonable and acceptable by the public if it happened in our own country.

5. That is is only by pure coincidence that Israel bombing “Hamas targets” in civilian infrastructure and residential buildings just so happens to look exactly the same as what you’d expect to see if Israel was simply bombing civilian infrastructure and residential buildings and lying about its reasons for doing so.

6. That satellite images of entire neighborhoods reduced to rubble in Gaza have been caused by “precision strikes” directed solely at Hamas and have been carried out with the greatest of care for human life, despite Israeli officials openly saying that “the emphasis is on damage and not on accuracy” in this assault and that “Gaza will eventually turn into a city of tents; there will be no buildings.”

7. That this bombing campaign has anything to do with freeing Israeli hostages—as though the bombing campaign itself has not killed dozens of hostages, and as though anyone believes Israel would stop bombing Gaza after the hostages are returned.

8. That the only reason anyone could possibly oppose the detonation of thousands of bombs on an open air prison full of children would be if they had very strong and hateful opinions toward the members of the religion of Judaism.

9. That Hamas attacked Israel entirely out of the blue and completely unprovoked, solely because they are evil and hate Jews.

10. That Washington is powerless to stop this genocide that it is directly funding and supplying.” —[Caitlin Johnstone](#)

9 November 2023: “Netanyahu rejected ceasefire-for-hostages deal in Gaza, sources say.

Israeli PM said to have turned down proposal in early talks and continues to take tough line.

Benjamin Netanyahu rejected a deal for a five-day ceasefire with Palestinian militant groups in Gaza in return for the release of some of the hostages held in the territory early in the war, according to sources familiar with the negotiations.

The sources said the Israeli prime minister rejected the deal outright in negotiations soon after Hamas militants staged an unprecedented incursion into Israeli territory on 7 October, killing an estimated 1,400 people.

Negotiations resumed after the launch of the Israeli ground offensive on 27 October, but the same sources said Netanyahu had continued to take a tough line on proposals involving ceasefires of different durations in exchange for a varying number of hostages.

Others indicated that negotiations which took place prior to the ground invasion involved a far larger number of hostages, with Hamas proposing the release of dozens of foreign nationals captive in Gaza.

An estimated 240 people were taken hostage after fighters from Hamas, Palestinian Islamic Jihad and other groups based in Gaza, as well as civilians, crossed the reinforced border fence separating the territory from Israeli towns and kibbutzim.

Public anger and demands that Israel prioritise hostage negotiations have increased, with families of those held in Gaza rallying outside Netanyahu’s residence earlier this week.

According to three sources familiar with the talks, the original deal on the table

involved freeing children, women and elderly and sick people in exchange for a five-day ceasefire, but the Israeli government turned this down and demonstrated its rejection with the launch of the ground offensive.

Israeli bombardments as well as a continuing ground invasion of the northern end of the Gaza Strip, home to 2.3 million people, have killed more than 10,300 people in the past month and injured in excess of 25,000, according to the Hamas-run health ministry. Abu Obeida, the spokesperson for Hamas's militant wing, Izz ad-Din al-Qassam, has said that the group is unable to release more hostages amid the mounting attacks.

Lt Col Richard Hecht, an Israeli army spokesperson, said: "There's no ceasefire, I repeat there's no ceasefire. What we are doing, that four-hour window, these are tactical, local pauses for humanitarian aid."

Palestinian Islamic Jihad released a video it said showed two hostages, a woman in her 70s and a 13-year-old boy, held in Gaza. A spokesperson for the group's military wing said it was "ready to release them on humanitarian grounds when the security conditions on the ground are met". Hecht said the footage amounted to "psychological terrorism of the worst kind I've seen in my life".

Indirect negotiations between Israeli officials and Hamas, mediated by Qatar as the two groups do not officially have contact, have recently focused on the possibility of a ceasefire lasting between one and three days, tied to the release of between 10 and 15 hostages.

A source with knowledge of the negotiations said the push to cease hostilities for a short time and exchange a small number of hostages was a litmus test and a gateway to further hostage talks.

One source with knowledge of the talks, which slowed after the Israeli ground invasion, said a central point of discussion was a demand by the Israeli side for Hamas to provide a full list specifying the name and details of each person held in Gaza. The Israeli side was unwilling to cease bombardments without receiving this list.

Hamas responded that it was unable to provide the list without a pause in the fighting, as the estimated 240 hostages were held by a number of different groups in places across Gaza. That suggested even Hamas leaders do not know for sure how many people are held captive, their locations or the number who have survived the bombardments.

Another source said Hamas originally demanded prisoner exchanges, fuel and other supplies in return for the hostages, but these demands were dropped in favour of a halt to the airstrikes alone.

"Each time the Israeli counter-demand got harder," the source said. Members of Hamas have previously said they took hostages in order to exchange them for the thousands of Palestinian prisoners held in Israeli jails.

The negotiations have also brought splits inside the Israeli establishment to the fore, pitting hawks in the military, government rightwingers, and particularly Netanyahu, against the Mossad intelligence agency, which is the lead agency in hostage negotiations, and some of the generals.

“Each time a deal would go back to Bibi [Netanyahu] it would come back with tougher demands,” one source said. Netanyahu has repeatedly publicly rejected any idea of a ceasefire, and has instead opted to intensify attacks on Gaza.

Talks have focused on attempts to find figures within the Israeli camp who are receptive to the argument that further hostage releases would be impossible amid an escalation in the fighting.” —[Ruth Michaelson in Istanbul, Julian Borger in London and Emine Sinmaz in Jerusalem](#) *The Guardian*

17 November 2024: “On 17 November 2023, South Africa referred the situation in the State of Palestine to the Office of the Prosecutor (OTP) of the International Criminal Court (ICC), pursuant to Article 14 of the Rome Statute. The referral was delivered in person by South Africa’s ambassador in the Hague, His Excellency Mr Vusi Madonsela.

The Palestine situation was referred by the State of Palestine in 2018 and the Prosecutor of the ICC opened an investigation in 2021 after Pre-Trial Chamber I of the ICC confirmed that the territorial jurisdiction of the situation includes Gaza and the West Bank, as well as East Jerusalem. This is after a number of countries sought to block the referral by the Palestinian Authority by challenging the court’s jurisdiction with regards to the situation in Palestine.

This investigation is ongoing, and the prosecutor, Mr Karim A.A. Khan has confirmed that Rome Statute crimes committed since 7 October 2023 form part of the OTP’s investigation.

South Africa, along with like-minded States Parties, i.e., Bangladesh, Bolivia, Venezuela, Comoros and Djibouti, as state parties to the Rome Statute, submitted a joint referral of the situation in Palestine to ensure that the ICC pays urgent attention to the grave situation in Palestine and thereby, lending their support to the Prosecutor’s investigation. Venezuela will petition the court in writing to join the submission.

South Africa is further encouraging other States Parties to the Rome Statute to join the referral, or to submit separate referrals independently.

South Africa remains committed to ending impunity for war crimes, crimes against humanity and genocide, and it is hoped that the situation in Palestine will be prioritised by the ICC in order to deliver justice to the victims of these grave crimes.” —[Republic of South Africa media statement](#)

“Vimlaum” appears twice in the Bible, once here and once regarding Philistine virgins - according to Abimelech breaking his oath and filling the wells with dirt, David filled Saul with a hundred Philistine virgins twice as much and gave him two hundred instead of one hundred (Baal Torim): to the king in a hurry, because with a hundred Philistine concubines to take revenge on the king's enemies... And David arose and he and his men went, and there were two hundred Philistine men, and David brought their concubines and A nation for the king.

Since ancient times, we are working to repair the world and they are working to destroy. So 3500 years ago with the Philistines and so with their imagined descendants today even more so. We desire life and they desire terror and death. We fill the land with everything good and they fill it with dirt and ashes.

David added a hundred Philistine foreskins as revenge for plugging the wells with dirt. **Our fighters, who went to war for the house and to take revenge for the terrible massacre carried out by the Nazi terrorists, will cover them in their tunnels with dirt, and will return to peace with the abductees in AZ, only after they have cut off all these damned foreskins.**

We know that Israeli authorities revised the “1400+ killed” on Oct 7 figure down to 1200. However, insufficient attention has been paid to **the reason given**. How was the figure over by 200?

Lior Haiat, spokesperson for Israel’s Foreign Ministry, said on Nov 10 to the AFP, “It is due to the fact that there were a lot of corpses that were not identified and now we think those belong to terrorists...not Israeli casualties.” ([WHO Chief outlines ‘unimaginable conditions’ in Gaza hospitals to UN Security Council](#))

Mark Regev, Senior Advisor to Israeli PM, added in an interview with Mehdi Hasan on Nov 17 that “there were actually **bodies that were so badly burnt**, we thought they were ours; in the end, apparently, they were Hamas terrorists.” ([YouTube video](#)).

Now, this is interesting! Because so far, it was alleged that all the “burning” was done by Hamas fighters. But unless they were burning themselves, it seems clear the IDF did quite a bit of burning of its own. That is, it used **heavy artillery in civilian areas** to kill the fighters.

This is further proof, if any was needed, that the IDF is responsible for at least some, probably most, of the heavy damage in the kibbutzim, the rave, and other areas, including the killing of Israeli citizens. 24 November 2023: "In addition to Norm Finkelstein's very valid observations, here's TWO more reasons that "do you condemn Hamas?" is disingenuous/bad framing.

Hint - BOTH are cases of linguistic over-generalizing:

1) "'Hamas' isn't a single bio-organism. You can't talk of condemning "it" as such. INDIVIDUALS who align to it? Potentially - sure. But to talk of condemning a whole group is yet another case of collective guilt.

2) Moral evaluation applies to SPECIFIC ACTS, not "groups." An individual in a group can and does do multiple things. And if one act by that individual is "condemnable", that doesn't mean other acts by the individual at the same time are. For instance...

People DO have a right to use lethal force for self-defense, including against occupiers.

IF a civilian is harmed, that's a different act which s/b condemned. But recognizing such DOES NOT erase the rightness of the first act.

Demanding a lump "condemnation" obscures that.

A few more points:

1) Israel has mandatory service. A large % is active or retired IDF &/or armed settlers. That makes them combatants. And in the heat of battle, you CANNOT stop & ask people if they're armed (or expect them to tell the truth, either). That's Israel's doing.

2) And while violence against clear civilians (or war crime atrocities in general) are never excusable ISRAEL still bears the lion's share of the blame/responsibility. It is ISRAELI policies which have fueled any of such suffering, hopelessness & rage. #notinmyname #neveragain" —[gaijingirl](#)

25 November 2023: “The White House has requested the removal of restrictions on all categories of weapons and ammunition Israel is allowed to access from U.S. weapons stockpiles stored in Israel itself.

The move to lift restrictions was included in the White House’s supplemental budget request, sent to the Senate on October 20. “This request would,” the proposed budget says, “allow for the transfer of all categories of defense articles.”

The request pertains to little-known weapons stockpiles in Israel that the Pentagon established for use in regional conflicts, but which Israel has been permitted to access in limited circumstances — the very limits President Joe Biden is seeking to remove.

“If enacted, the amendments would create a two-step around restrictions on U.S. weapons transfers to Israel,” said John Ramming Chappell, a legal fellow with the Center for Civilians in Conflict.

Created in the 1980s to supply the U.S. in case of a regional war, the War Reserve Stockpile Allies-Israel, or WRSA-I, is the largest node in a network of what are effectively foreign U.S. weapons caches. Highly regulated for security, the stockpiles are governed by a set of strict requirements. Under circumstances laid out in these requirements, Israel has been able to draw on the stockpile, purchasing the weapons at little cost if it uses the effective subsidy of U.S. military aid.

With the WRSA-I, Biden is looking to lift virtually all the meaningful restrictions on the stockpile and the transfer of its arms to Israel, with plans to remove limitations to obsolete or surplus weapons, waive an annual spending cap on replenishing the stockpile, remove weapon-specific restrictions, and curtail congressional oversight. All

of the changes in the Biden budget plan would be permanent, except for lifting the spending cap, which is limited to the 2024 fiscal year.

The changes would come in an arms-trade relationship that is already shrouded in secrecy, as *The Intercept* recently reported. Whereas the administration has provided pages of detailed lists of weapons provided to Ukraine, for instance, its disclosure about arms provided to Israel could fit in a single, short sentence. Last week, Bloomberg obtained a leaked list of weapons provided to Israel, revealing that they include thousands of Hellfire missiles — the same kind being used extensively by Israel in Gaza.

The effect of lifting the restrictions on transfers to Israel — such as eliminating the requirement that the weapons be part of a surplus — could harm U.S. interests by diminishing American preparedness for its own conflicts in the region, said Josh Paul, a former official who served in the State Department's Bureau of Political-Military Affairs.

Paul, who resigned over U.S. arms assistance to Israel, told *The Intercept*, “By dropping the requirement that such articles be declared excess, it would also increase the existing strain on U.S. military readiness in order to provide more arms to Israel.”

The U.S. government is only supposed to spend \$200 million per fiscal year restocking the WRSA-I — about half the total cap for all U.S. stockpiles round the globe. The White House request, however, would waive the limit on U.S. contributions to the stockpile in Israel. That would allow the stockpile to be continuously replenished.

“The President's emergency supplemental funding request,” Paul said, “would essentially create a free-flowing pipeline to provide any defense articles to Israel by the simple act of placing them in the WRSA-I stockpile, or other stockpiles intended for Israel.”

The U.S. currently requires that Israel grant certain concessions in exchange for certain types of arms assistance from the Pentagon, but the White House request would remove this condition as well.

Finally, the White House request would also reduce congressional oversight of U.S. arms transfers by reducing the length of advance notice made to Congress before a weapons transfers. Under current law, there must be 30 days prior notice, but the Biden budget request would allow this to be shortened in “extraordinary” circumstances.

“The Biden administration's supplemental budget request would further undermine oversight and accountability even as U.S. support enables an Israeli campaign that has killed thousands of children,” said Chappell, of Center for Civilians in Conflict.” —[the Intercept](#)

29 November 2023: “Sometimes Israel’s crimes are so horrific that at first you don’t even understand what you’re looking at. You just stare at it trying to make sense of what you’re seeing for a bit, like you would if you suddenly saw a space alien or a leprechaun or something.

It happened to me yesterday when I was watching a Sky News report about a teenage boy who was shot by Israeli forces in Jerusalem for celebrating the release of Palestinian prisoners in the hostage negotiations with Hamas. I was watching it thinking to myself, I must be misunderstanding what I’m looking at. I know that Israel does gross things, but surely the story here isn’t that they shot a kid for being happy about something.

Then, as has happened so many times over the last two months, I kept watching and learned that yes, that is indeed what happened. The deputy mayor of Jerusalem Fleur Hassan-Nahoum is seen defending the shooting by saying “part of the deal is that there would be no celebrations for the release of attempted murderers” (this was actually not a part of the deal, it was just a decree issued by Israel’s national security minister) and claiming dishonestly that “we’re talking about the release of attempted murderers” (the vast majority have not been convicted of any crime and have been denied any due process for the accusations against them).

The band Eve6 nicely summed up what it felt like watching the clip of the deputy mayor’s comments, tweeting, “The remarkable thing about this clip is her self assurance. Like she’s supremely confident that ‘we shot the teenager because he was celebrating’ is a thing that people will find reasonable.”

I had the same experience reading about the five premature babies who were left to die after the IDF raided al-Nasr Pediatric Hospital in Gaza earlier this month, their decomposing bodies only discovered when the temporary ceasefire allowed access to the hospital. It’s just too insane to believe — they attacked a pediatric hospital? And then they left the babies there to die? What??

The only reason we’re learning about this now is because the pause in fighting allowed journalists to get cameras into the building and show the dead infants to the world. This calls to mind the Politico report immediately prior to the ceasefire which said that the White House was worried “an unintended consequence of the pause” would be “that it would allow journalists broader access to Gaza and the opportunity to further illuminate the devastation there and turn public opinion on Israel.”

Indeed, since the pause in fighting began the world has been receiving drone

footage from mainstream platforms like Reuters and *The Washington Post* revealing vast expanses of urban terrain completely destroyed by a blanket of Israeli military explosives spanning from city block to city block. Looking at the blatantly indiscriminate devastation that's been caused by Israel's assault on Gaza since October 7 makes it clear that the IDF are not targeting Hamas but Gaza itself.

I've been amazed at how much I've been sleeping since the ceasefire started; that's why I haven't been writing as much. I guess spending weeks staring at unbelievable horrors unfolding on your screen can be pretty hard on your system if you're sensitive to that sort of thing, so my body's been resting up as much as it can while there's an opportunity.

And I'm just here watching this all unfold safely from my home in Melbourne. I cannot imagine what it's like to be living in the midst of this horror for the last two months, trying to figure out the best way to survive while also grieving the family, friends and neighbors you're losing along the way. These people have all been deeply traumatized in ways that will haunt them for the rest of their lives, if they survive the violence, disease and deprivation that's to come.

This thing is so astonishingly ugly, and it could get a whole lot uglier after the ceasefire ends. If there's anything positive to be found in this living nightmare, it's that it's so earth-shakingly ugly that it just might shake the world awake." —[Caitlin Johnstone](#)

H. RES. 894

Strongly condemning and denouncing the drastic rise of antisemitism in the United States and around the world.

IN THE HOUSE OF REPRESENTATIVES

NOVEMBER 28, 2023

Mr. KUSTOFF (for himself and Mr. MILLER of Ohio) submitted the following resolution; which was referred to the Committee on the Judiciary, and in addition to the Committee on Foreign Affairs, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

RESOLUTION

Strongly condemning and denouncing the drastic rise of antisemitism in the United States and around the world.

Whereas acts of hate, intimidation, discrimination, and violence based on ethnicity or religion have no place in our country nor in the global community;

- 1 *Resolved*, That the House of Representatives—
- 2 (1) strongly condemns and denounces all in-
- 3 stances of antisemitism occurring in the United
- 4 States and globally;
- 5 (2) reaffirms and reiterates its strong support
- 6 for the Jewish community at home and abroad;
- 7 (3) calls on elected officials and world leaders
- 8 to condemn and fight all forms of domestic and
- 9 global antisemitism;
- 10 (4) clearly and firmly states that anti-Zionism
- 11 is antisemitism; and
- 12 (5) rejects all forms of terror, hate, discrimina-
- 13 tion, and harassment of members of the Jewish com-
- 14 munity.

4 December 2023: “The Horrors In Gaza Are Happening Because The US Empire Wants Them To Happen

I came across an interesting quote made last month by a retired Israeli major general named Yitzhak Brick about the ongoing IDF assault on Gaza.

“All of our missiles, the ammunition, the precision-guided bombs, all the airplanes and bombs, it’s all from the U.S.,” Brick said. “The minute they turn off the tap, you can’t keep fighting. You have no capability. ... Everyone understands that we can’t fight this war without the United States. Period.”

Brick made these observations not as an anti-imperialist critique of the US war machine, but as part of a diatribe about how ridiculous it is for Israel to be asked by Washington to allow humanitarian aid into Gaza and to try to avoid civilian casualties. He apparently believes Israel should be killing far more Palestinians in Gaza, not fewer.

Brick — whose warnings of an impending Hamas attack were dismissed and ignored by Israeli government and military officials in the lead-up to the events of October 7 — makes an important point nonetheless. The support of the US war machine is absolutely 100 percent essential for Israel's continued murderous onslaught in Gaza, which just killed some 700 people in a single 24-hour period. This necessarily means that these ongoing acts of human butchery are occurring because the US permits them to.

Brick's comments fly in the face of narratives fed to the press by the Biden administration saying that the White House is frustrated by Israel's complete disregard for human life in Gaza but finds itself powerless to influence its ally's actions in a more humanitarian direction.

In an article published last month titled "White House frustrated by Israel's onslaught but sees few options," *The Washington Post* reports that according to unnamed US officials the Biden administration believes that "Israel's counterattack against Hamas has been too severe, too costly in civilian casualties, and lacking a coherent endgame, but they are unable to exert significant influence on America's closest ally in the Middle East to change its course."

This is of course a load of bullshit. The Biden administration could end all this with one phone call, in the same way it commanded Israel to restore Gaza's communications in October after the IDF cut the enclave off from the world, and in the same way Israel's 1982 assault on Lebanon was halted with a phone call from President Reagan.

The ongoing massacre in Gaza is happening because the US empire wants it to happen. They could stop the bloodshed at any time, but they don't, because they do not want to. This is because the US empire is run by sociopaths who only care about global domination, and nonstop violence from Israel is a key component in the domination of a crucial geostrategic region on this planet.

Don't let the monsters in Washington DC and Virginia wash their hands of this horrific atrocity. They know exactly what they're doing. They're every bit as responsible for Israel's crimes against humanity as Israel itself. They posture and pay lip service to the protection of civilian lives, but they do so exclusively for their own PR interests. These freaks would happily send every Palestinian alive to the gas chambers if they thought it would advance their strategic interests one iota." — [Caitlin Johnstone](#)

4 December 2023: "I'm going to say this once regarding the rape allegations against Hamas. I'm not here to defend them. They are defending themselves, and have denied all the allegations including the beheading babies, the HQ command center beneath the Al Shifa Hospital stories etc. that were all proven to be hoaxes.

My point is this, Israel lies ALL THE TIME and have been called out in real-time over the past 50+ days. Israel does not get to make accusations to further paint all Palestinians as savages and barbarians in an attempt to whip the the public into a frenzy with the aim of garnering support for their genocidal agenda.

No, I will not believe a word you say until and unless you provide **empirical evidence** for every claim. You do not get the luxury of just claiming shit and expect people to believe you. Your reputation is atrocious.

I'm not even saying it didn't happen. My personal opinions don't matter. I'm simply saying PROVE IT or STFU. I'm tired of all the attempts to shame people into believing your stories. I'm tired of you calling people antisemitic for asking for proof. I'm tired of the gaslighting.

You don't get the benefit of the doubt after what you've done to the Palestinians. This isn't just about this specific allegation, it goes for any and every accusation Israel makes. In my book, its 100% bullshit propaganda until proven true, with Israel."

13 December 2023: “A Warner Robins, Georgia, teacher is accused of threatening to behead a student after she made a comment about his Israeli flag, according to the Houston County Sheriff's Office.

Benjamin Reese is a 7th-grade social studies teacher at Warner Robins Middle School. He was arrested on Dec. 8.

Several witnesses said they overheard Reese shouting “You motherf*****g piece of s**t! I’ll kick your a**. I should cut your motherf*****g head off,” around students on Friday.

According to the incident report, at around 3:30 p.m. on Dec. 7, a deputy was on duty when he was informed Reese threatened a child’s life. It happened in the 7th-grade technical hallway when students were on their way back to the 8th-grade hallway.

The report says a student wanted to talk to Reese about the Israeli flag in his classroom and told him she found it offensive.

Reese asked her if it had anything to do with Judaism. She wanted to know why it was hanging there, and Reese told the student he was Jewish and had family members who still lived in Israel.

The student says she found the flag offensive “due to Israelis killing Palestinians.”

Reese then told the student she was being antisemitic.

After that, several different witnesses independently said they heard Reese say, “he would kick her f*****g a**, slit her god***n throat and drag her a** outside and cut her head off.”

A faculty member says she heard Reese say, “You don’t make an antisemitic comment like that to a Jew.” The witness says the student responded negatively to Reese but was not yelling.

The witness says the students left the classroom, but Reese followed them down the hallway.

The same witness says Reese was later seen returning to his classroom, cursing extremely loudly. The witness says he was yelling that he “should not be spoken to like that because he is a Jew.”

He went on saying, “I will drag her a** into the parking lot, slit her f*****g throat and kill her.”

A deputy at the school interviewed several witnesses and they said they heard Reese make similar statements. They included other teachers, staff members and students who were in class for tutoring or after-school detention.

14 December 2023: “Nearly half of the air-to-ground munitions that Israel has used in Gaza in its war with Hamas since October 7 have been unguided, otherwise known as “dumb bombs” according to a new US intelligence assessment.

The assessment, compiled by the Office of the Director of National Intelligence and described to CNN by three sources who have seen it, says that about 40-45% of the 29,000 air-to-ground munitions Israel has used have been unguided. The rest have been precision-guided munitions, the assessment says.

Unguided munitions are typically less precise and can pose a greater threat to civilians, especially in such a densely populated area like Gaza. The rate at which Israel is using the dumb bombs may be contributing to the soaring civilian death toll.

On Tuesday, President Joe Biden said Israel has been engaged in “indiscriminate bombing” in Gaza.

Asked for comment on the assessment, IDF spokesperson Nir Dinar told CNN, “We do not address the type of munitions used.”

Major Keren Hajioff, an Israeli spokesperson, said on Wednesday that “as a military committed to international law and a moral code of conduct, we are devoting vast resources to minimizing harm to the civilians that Hamas has forced into the role of human shields. Our war is against Hamas, not against the people of Gaza.”

But experts told CNN that if Israel is using unguided munitions at the rate the US believes they are, that undercuts the Israeli claim that they are trying to minimize civilian casualties.

“I’m extremely surprised and concerned,” said Brian Castner, a former Explosive Ordnance Disposal (EOD) officer who now serves as Amnesty International’s senior crisis adviser on arms and military operations.

“It’s bad enough to be using the weapons when they are precisely hitting their targets. It is a massive civilian harm problem if they do not have that accuracy, and if you can’t even give a benefit of the doubt that that the weapon is actually landing where the Israeli forces intended to,” Castner added.

Following the publication of the article, IDF spokesperson Nir Dinar provided further comment.

“The IDF strikes military targets of the Hamas terrorist organization, based on high-quality intelligence and the operational necessity, while using high-quality

munitions that are operated by skilled pilots and advanced systems, which continuously assess and verify that the strikes are directed at military targets. The type of munitions used in each strike is determined according to the characteristics of the target, the operational need, and the effort to mitigate harm to civilians, which the terrorist organization uses as a human shields,” Dinar said.

It is not clear what kinds of unguided munitions the Israelis have been using, though experts noted that the Israeli military has been using M117 bombs that appear unguided. The Israeli Air Force posted photos of fighter aircraft armed with what looked like the M117 bombs on X in October, Castner noted.

The US has also provided Israel with unguided munitions, including 5,000 Mk82 bombs, a source familiar with recent weapons transfers told CNN, confirming a *Wall Street Journal* report. But the US also provides Israel with systems that can transform those dumb bombs into “smart” ones, including the Joint Direct Attack Munitions guidance system and the Spice Family Gliding Bomb Assemblies.

The US has provided approximately 3,000 JDAMS to Israel since October 7, CNN previously reported, and told Congress last month that it planned to transfer \$320 million worth of the Spice Family kits.” —[CNN](#)

Israel can end this any time by ceasing to be a murderous and tyrannical occupying regime held together by endless violence and apartheid. Israel wasn't attacked because Palestinians are innately evil and want to kill Jews, Israel was attacked because it has treated Palestinians horrifically for generations. If Israel and its allies ended the injustices, paid reparations and righted the wrongs that have been inflicted on Palestinians for the last 75 years, there could be a sustainable peace.

The only way to believe all this intense civilian-slaughtering warfare is necessary to obtain peace is to believe Palestinians are orc-like subhumans who are acting out of an innate hatefulness and thus cannot be reasoned with or negotiated with. 18 December 2023: "The entire position of the pro-Israel side of the Gaza debate is hinged on the premise that there is no limit on the number of innocents you can morally kill when pursuing a military objective. From their point of view, not only is it perfectly acceptable that ten thousand children have been killed by Israel's bombing campaign in Gaza, it would be perfectly acceptable if it was 100 thousand, or a million. As far as the Israel supporter's moral framework is concerned, Hamas could have killed one-tenth the number of Israelis it killed on October 7 and Israel can kill ten times the number of children it's killed, and Israel's actions in Gaza would still be moral.

For normal, psychologically healthy people, this position looks deranged. Of COURSE there's a limit on the number of innocent people it's acceptable to kill while pursuing military objectives, especially objectives that could be resolved non-militarily. The only exceptions would be situations in which there is no other option besides either defeating your enemy by any means necessary or facing your own annihilation. Since there is no rational argument that Hamas poses an existential threat to the state of Israel, and since there were options for responding to October 7 without dropping a single bomb, there is no argument to be made that it's acceptable to kill all these innocent human beings while pursuing the (completely unattainable) goal of wiping out armed resistance to Israel militarily.

Peace could be obtained by negotiating with the Palestinian resistance and achieving a deal that works for everyone. The uneasy, abusive status quo of October 6 could also be returned to by simply addressing the massive, spectacular failures of Israel's military and intelligence services which let October 7 happen in the first place. When you weigh these two options against the option of killing a thousand children a

week in a military offensive in Gaza, both of them are self-evidently superior in the eyes of any normal, healthy person.

A peaceful resolution isn't impossible, it just isn't desired. It isn't desired because Israel has long sought to further expel Palestinians from their land, and the "war on Hamas" provides cover for that goal. The claim that Israel has no other choice but to snuff out tens of thousands of lives in the name of fighting Hamas is patently false; it doesn't need to, it just wants to. Ultimately their argument is "We need to kill all those people because we really really want to," which is not a valid defense." —[Caitlin Johnstone](#)

18 December 2023: "A local Israeli council head suggested in a radio interview that Gaza should be "flattened completely, just like Auschwitz today," the latest Israeli official to publicly call for the annihilation of the besieged Palestinian enclave.

David Azoulay, a political leader for the northern Israeli town of Metula, made the remark Sunday in an interview with Tel Aviv's Radio 103FM. He went further, suggesting that Palestinians in Gaza be forcibly sent to refugee camps in Lebanon. Metula sits near the Israel-Lebanon border.

What happened on Oct. 7 is a "kind of second Holocaust," Azoulay said, according to a translation of the interview by Haaretz. The politician said that while he is "not a far-right person," he believes Palestinians in Gaza should be ordered to "go to the beaches," where Israeli ships will "load them up, the civilians ... the terrorists they have there, and place them on Lebanon's shores where there are enough refugee camps."

When asked what Israel should do with the Gaza Strip in the event that all the territory's residents be forcibly driven out, Azoulay responded that it should be "left empty, just like Auschwitz. A museum, so the whole world will learn what the state of Israel can do."

Israel, Azoulay continued, should then turn Gaza into a buffer zone "from the sea to the border fence, completely empty, so that everyone remembers what was once there."

The Auschwitz-Birkenau State Museum released a statement with strong words for Azoulay, saying Israeli authorities should react to his "shameful abuse, as terrorism as can never be a response to terrorism."

"Memory of victims of Auschwitz has, at times, been violated and instrumentalized in various extreme statements," the museum said. "David Azoulay appears to wish to use the symbol of the largest cemetery in the world as some sort of a sick, hateful pseudo-artistic, symbolic expression."

"Calling for acts that seem to transgress any civil, wartime, moral, and human laws, that may sound as a call for murder of the scale akin to Auschwitz, puts the whole honest world face-to-face with a madness that must be confronted and firmly rejected," the statement continued.

Azoulay joins multiple other Israeli officials who have publicly called for violence against Palestinian civilians or otherwise dehumanized them. Last month, Israeli security cabinet minister Avi Dichter said that Israel is "rolling out the Gaza Nakba"

when he was shown images of north Gaza's residents evacuating en masse to the south, as ordered by Israeli forces. The Nakba refers to the 1948 mass displacement of Palestinians from their land.

Days earlier, Jerusalem Affairs and Heritage Minister Amichai Eliyahu said that dropping a nuclear bomb on Gaza is "an option" because "there are no non-combatants in Gaza."

Israeli Prime Minister Benjamin Netanyahu has called the mass killing of Palestinian civilians "collateral damage" of his military offensive in Gaza.

In October, Israeli Defense Minister Yoav Gallant said the military is "fighting human animals," and called for denying Palestinians food, electricity, water and fuel. The Israeli government followed through on those remarks, leaving a substantial portion of Palestinians without access to basic needs, outside a trickle of aid being allowed in." —[Huffington Post](#)

19 December 2023: "Palestinians who were among the hundreds arrested by the IDF in northern Gaza in scenes that went viral earlier this month are speaking out about what they endured.

Palestinians detained in the shattered town of Beit Lahiya, the urban refugee camp of Jabaliya and neighborhoods of Gaza City say they were bound, blindfolded and bundled into the backs of trucks. Some say they were taken to the camp at an undisclosed location, nearly naked and with little water.

"We were treated like cattle, they even wrote numbers on our hands," says Ibrahim Lubbad, a 30-year-old computer engineer arrested in Beit Lahiya on December 7 with a dozen other family members and held overnight. "We could feel their hatred."

"My only crime is not having enough money to flee to the south," says Abu Adnan

al-Kahlout, an unemployed 45-year-old with diabetes and high blood pressure in Beit Lahiya. He was detained December 8 and released after several hours when soldiers saw he was too faint and nauseated to be interrogated.

“Do you think Hamas are the ones waiting in their homes for the Israelis to come find them now?” he asks. “We stayed because we have nothing to do with Hamas.”

“There are corpses all over the place, left out for three, four weeks because no one can reach them to bury them before the dogs eat them,” says Raji Sourani, a lawyer with the Palestinian Center for Human Rights in Gaza. He says he saw dozens of dead bodies as he made his way from Gaza City to the southern border with Egypt last week. Israeli forces are holding one of his colleagues, human rights researcher Ayman Lubbad, in custody.

Returning home brought its own hardship. Israeli soldiers dropped detainees off after midnight without their clothes, phones or IDs near what appeared to be Gaza’s northern border with Israel, those released say, ordering them to walk through a landscape of destruction, tanks stationed along the road and snipers perched on roofs.

In response to questions about alleged mistreatment, the Israeli military says that detainees were “treated according to protocol” and were given enough food and water.

The army spokesman, Rear Adm. Daniel Hagari, says that arrests took place in two Hamas strongholds in northern Gaza and that detainees were told to strip to make sure they didn’t conceal explosives.

Hagari says the men are questioned and then told to dress, and that in cases where this didn’t happen, the military would ensure it doesn’t occur again. Those believed to have ties to Hamas are taken away for further interrogation, and dozens of Hamas members have been arrested so far, he says.

The others are released and told to head south, where Israel has told people to seek refuge, Hagari says.

The IDF says those arrested included Hamas terrorists and that all detained were stopped for a reason.” —[The Times of Israel](#)

Any other country in the world faced with what Israel suffered on October 7th would do the same thing. What is striking to me is that even as again we hear many countries urging the end to this conflict, which we would all like to see, I hear virtually no one saying, demanding, Hamas, that it stop hiding behind civilians, that it lay down its arms, that it surrender. 20 December 2023: “OHCHR OPT has received disturbing information alleging that Israeli Defence Forces (IDF) summarily killed at least 11 unarmed Palestinian men in front of their family members in Al Remal neighbourhood, Gaza City, which raises alarm about the possible commission of a war crime. This comes in the wake of earlier allegations concerning the deliberate targeting and killing of civilians at the hands of Israeli forces.

The Israeli authorities must immediately institute an independent, thorough and effective investigation into these allegations, and if found to be substantiated, those responsible must be brought to justice and measures implemented to prevent any such serious violations from recurring.

On 19 December 2023, between 2000 and 2300 hours, IDF reportedly surrounded and raided Al Awda building, also known as the “Annan building”, in Al Remal neighborhood, Gaza City, where three related families were sheltering in addition to Annan family. According to witness accounts circulated by media sources and Euro-Med Human Rights Monitor, while in control of the building and the civilians sheltering there, the IDF allegedly separated the men from the women and children, and then shot and killed at least 11 of the men, mostly aged in their late 20’s and early 30’s, in front of their family members. The IDF then allegedly ordered the women and children into a room, and either shot at them or threw a grenade into the room, reportedly seriously injuring some of them, including an infant and a child. 24 December 2023: “The Government Media Office in Gaza has revealed that the Israeli occupation forces had committed field execution crimes against more than 137 Palestinian civilians in the governorates of Gaza and the Northern Gaza.

The Director-General of the Media Office, Ismail Thawabteh, stated in a press conference yesterday evening that they received testimonies about the IOF establishing

detention camps east of Gaza City. In these camps, large pits were dug, and dozens of Palestinian citizens, who were alive, were placed in them. They were then executed by direct gunfire and buried with bulldozers.

He confirmed that these crimes were repeated in Gaza City and the Northern Gaza province through the execution of dozens of civilians in front of their families. The occupation forces also executed pregnant women on their way to Al-Awda Hospital in northern Gaza, even as they raised white flags. However, the occupation forces shot them at close range and then bulldozed and crushed them to death.

Thawabteh added that the office would later reveal field execution crimes committed by the Israeli occupation forces against dozens who were arrested and buried in mass graves.

With 78 days into the genocidal war, the Israeli occupation forces committed 1,720 massacres, he added, resulting in 27,258 civilian victims and persons unaccounted for. Among them are 20,258 documented martyrs, including 8,200 children, 6,200 women, 310 medical staff, 35 civil defense personnel, and 100 journalists.

Thawabteh stated that 7,000 people are still missing, either under the rubble or with unknown fates. 70% of these are children and women.

Regarding the destruction, the government official confirmed that the occupation destroyed 126 government offices, 92 schools and universities that went out of service completely, and 285 partially damaged schools and universities. The occupation also completely destroyed 115 mosques and partially demolished 200 mosques, in addition to targeting three churches.

On the damage to residential units, he mentioned that the occupation demolished 55,000 residential units completely and 258,000 partially, totaling 313,000 residential units.

Regarding hospitals, the Israeli forces targeted more than 23 hospitals, rendering them out of service. They also targeted 53 health centers, affecting the provision of health services. The occupation targeted 140 health facilities, impacting the healthcare services provided. Additionally, 102 ambulances were targeted, suffering complete damage.” —[Quds News Network](#)

25 December 2023: “CAIRO (AP) Ñ Israel and Hamas on Monday gave cool public receptions to an Egyptian proposal to end their bitter war. But the longstanding enemies stopped short of rejecting the plan altogether, raising the possibility of a new round of diplomacy to halt a devastating Israeli offensive in the Gaza Strip.

The Egyptian plan calls for a phased hostage release and the formation of a Palestinian government of experts to administer the Gaza Strip and occupied West Bank, according to a senior Egyptian official and a European diplomat familiar with the proposal.

The Egyptian official, speaking on condition of anonymity to discuss the proposal, said the details were worked out with the Gulf nation of Qatar and presented to Israel, Hamas, the United States and European governments. Unofficial

No. 2023/77

29 December 2023

The Republic of South Africa institutes proceedings against the State of Israel and requests the Court to indicate provisional measures

THE HAGUE, 29 December 2023. South Africa today filed an application instituting proceedings against Israel before the International Court of Justice (ICJ), the principal judicial organ of the United Nations, concerning alleged violations by Israel of its obligations under the Convention on the Prevention and Punishment of the Crime of Genocide (the “Genocide Convention”) in relation to Palestinians in the Gaza Strip.

According to the Application, “acts and omissions by Israel . . . are genocidal in character, as they are committed with the requisite specific intent . . . to destroy Palestinians in Gaza as a part of the broader Palestinian national, racial and ethnical group” and that “the conduct of Israel — through its State organs, State agents, and other persons and entities acting on its instructions or under its direction, control or influence — in relation to Palestinians in Gaza, is in violation of its obligations under the Genocide Convention”.

The Applicant further states that “Israel, since 7 October 2023 in particular, has failed to prevent genocide and has failed to prosecute the direct and public incitement to genocide” and that “Israel has engaged in, is engaging in and risks further engaging in genocidal acts against the Palestinian people in Gaza”.

South Africa seeks to found the Court’s jurisdiction on Article 36, paragraph 1, of the Statute of the Court and on Article IX of the Genocide Convention, to which both South Africa and Israel are parties.

The Application also contains a Request for the indication of provisional measures, pursuant to Article 41 of the Statute of the Court and Articles 73, 74 and 75 of the Rules of Court. The Applicant requests the Court to indicate provisional measures in order to “protect against further, severe and irreparable harm to the rights of the Palestinian people under the Genocide Convention” and “to ensure Israel’s compliance with its obligations under the Genocide Convention not to engage in genocide, and to prevent and to punish genocide”.

Pursuant to Article 74 of the Rules of Court, “[a] request for the indication of provisional measures shall have priority over all other cases”.

30 December 2023 [regarding the *New York Times* article entitled “ ‘Screams Without Words’: How Hamas Weaponized Sexual Violence” on Oct. 7]: “What “women” are you talking about?

There are no women on record claiming that they suffered sexual violence on Oct.

7th.

This article cites one woman, Sapir, who claimed she witnessed rape. Her story is a transparent fraud. She claims that as one “terrorist” raped a woman, another cut off her breast with a box cutter. “One continues to rape her, and the other throws her breast to someone else, and they play with it, throw it, and it falls on the road,” Sapir said.

On top of witnessing that, “she saw three other women raped and terrorists carrying the severed heads of three more women.”

Where is the evidence of a severed breast and severed heads? Who really believes this insanity?

The article then cites two other women soldiers who claim that they saw signs of sexual violence in the corpses. But yet the article also concedes that the Israeli army has zero forensic or physical evidence of sexual violence. As one Israeli army spokesperson says: “We have zero autopsies, zero.”

Accordingly, Israel has zero evidence. Yet so many dupes are rushing to parrot this genocidal state’s insane claims.” —[Aaron Maté](#)

- “government spending and borrowing have soared, tax revenue has plummeted

- “the impact on Israel’s high-tech sector — the engine of the economy — is sobering”

- “Israel is spending treasure deploying more than 220,000 reservists into battle on average over the past three months and subsidizing their salaries. Many of these reservists are high-tech workers...”

- Israel “is also supporting 200,000 evacuees who have been displaced from Israeli villages along the Gaza border and the northern border with Lebanon”

- “tourism has flatlined”

- “construction, which ordinarily relies on Palestinian labor from the West Bank, has ground to a near-halt”

- “exports are down across the board”

- “reserve duty, displacement and knock-on effects of the war have idled as many as 20 percent of Israeli workers”

3 January 2024: “The “voluntary” resettlement of Palestinians from Gaza is slowly becoming a key official policy of the government, with a senior official saying that Israel has held talks with several countries for their potential absorption.

Zman Israel, The Times of Israel’s Hebrew sister site, has learned that Prime Minister Benjamin Netanyahu’s coalition is conducting secret contacts for accepting thousands of immigrants from Gaza with Congo, in addition to other nations.

“Congo will be willing to take in migrants, and we’re in talks with others,” a senior source in the security cabinet said.

Last Monday, Netanyahu told a Likud faction meeting that he is working to facilitate the voluntary migration of Gazans to other countries.

“Our problem is [finding] countries that are willing to absorb Gazans, and we are working on it,” he said.

The prime minister was responding to Likud MK Danny Danon, who claimed that “the world is already discussing the possibilities of voluntary immigration,” though the idea has been roundly rejected by the international community.

The far-right Religious Zionism and Otzma Yehudit parties, headed by Finance Minister Bezalel Smotrich and National Security Minister Itamar Ben Gvir, respectively, have backed the plans for migration.

Ministers and lawmakers from Netanyahu’s Likud have also been advocating the policy.

The far-right Religious Zionism and Otzma Yehudit parties, headed by Finance Minister Bezalel Smotrich and National Security Minister Itamar Ben Gvir, respectively, have backed the plans for migration.

On Tuesday, Intelligence Minister Gila Gamliel told Zman that “voluntary

migration is the best and most realistic program for the day after the fighting ends.”

On Tuesday, during a conference held in the Knesset to examine possibilities for postwar Gaza, Gamliel said: “At the end of the war, Hamas rule will collapse. There are no municipal authorities; the civilian population will be entirely dependent on humanitarian aid. There will be no work, and 60% of Gaza’s agricultural land will become security buffer zones.”

In internal discussions, Gamliel presented a map of the Gaza Strip after the fighting that shows remaining residents boxed in. Israel would cut ties with Gaza and expand its security buffer zones; control the Philadelphi Corridor, which runs along the 14-kilometer (8.7-mile) Gaza-Egypt border (a plan attacked by an Egyptian lawmaker on Saturday after it was announced by Netanyahu); and establish a permanent naval blockade

Gamliel said that Gaza must not be handed over to the Palestinian Authority, and Gazans must not be left in the Strip to be educated to hate, as that would mean that further attacks on Israel are only a matter of time. While rejecting the PA’s return, the government has offered few details on what political entity it wants to rule Gaza.

“The Gaza problem is not just our problem,” Gamliel said. “The world should support humanitarian emigration, because that’s the only solution I know.”

Likud’s Danon is another of the leading supporters of the plan to encourage Gazans to leave the Strip.

On Tuesday, he presented his five-step plan at a conference in the Knesset (demobilization, establishing a security buffer zone, Israeli presence at the Rafah border crossing between Gaza and Egypt, voluntary emigration, and eradicating the terrorist atmosphere).

In November, he published an op-ed piece in the *Wall Street Journal* along with Yesh Atid MK Ram Ben Barak in which the two detailed the plan for Palestinian migration for the first time, calling for “countries around the world to accept limited numbers of Gazan families who have expressed a desire to relocate.” Ben Barak later seemed to walk back the piece, claiming he had “not been completely understood.”

The security cabinet was supposed to meet Tuesday evening to discuss what will happen in Gaza at the end of the war.

Ministers intended to present their plans and in talks between some of them, the idea was also raised to ask Saudi Arabia to take in hundreds of thousands of Palestinians for work. The Gulf kingdom is in the midst of a tremendous construction boom and employs close to half a million workers, who currently come mainly from India, Bangladesh and other countries.” —[The Times of Israel](#)

4 January 2024: "Our main goal in the war is to eliminate the threat and not to neutralise it. And we know how to eliminate terrorists. It is more difficult for us with an idea. UNRWA is the source of the idea. The idea is that more and more terrorists are born in all kinds of methods. And it will be impossible to win the war if we do not destroy UNRWA. And this destruction must begin immediately. It is not relevant to talk about the day after. The day is now we must act to deal with these threats completely. Or that we will miss the opportunity window, as we have already done here several times. And in this context, there are two ways we can move forward today. One is the relationship of the State of Israel to UNRWA and the countries that contribute to it. And the second is the relationship to the Palestinian population that UNRWA serves. Sometimes in a legitimate way. In order to deal with the UNRWA itself, let's remember that it operates here, in the territories that Israel conquered in 1967, at the request of Israel to do so. This is what brought it here. Israel can now ask it to stop. And at the same time, dig into the refugee status that it distributes very generously. Because for a refugee, there are international obligations. UNRWA's duties cannot be ignored. They must be abandoned. Or they must go to hell. Whoever deserves it should go and check if the UNHCR can help." —Former Israeli foreign ministry official Noga Arbell as quoted in video at [HK](#)

Dear Honourable President, Honourable Vice President, and Honourable Secretary of State,

NOTICE OF INTENTION TO HOLD THE GOVERNMENT OF THE UNITED STATES OF AMERICA LIABLE AND COMPLICIT FOR THE ONGOING INTERNATIONAL CRIMES PERPETRATED IN ISRAEL / PALESTINE AGAINST THE PALESTINIAN PEOPLE

1. We, together with a group of lawyers from South Africa, act on behalf of all the Palestinian people who are directly affected by the ongoing international crimes and displacement perpetrated by the Israeli Government and its armed forces since, but not limited to, 1948, for reasons more fully expressed herein below.

1

2. We hereby place the Government of the United States of America ("the U.S. Government") on notice that we intend to bring legal proceedings against the U.S. Government based on overwhelming evidence that the U.S. Government has, and is, aiding, abetting and supporting, encouraging or providing material assistance and means to Israel and the Israeli Defense Forces ("Israel"). This conduct by the U.S. Government has enabled and continues to enable Israel to engage in international crimes against the Palestinian people. These crimes result in, amongst others, the displacement of the Palestinian people from their homes and property, destruction of Palestinian property, theft of Palestinian land and which facilitate and assist Israel in committing the ongoing and current war crimes, crimes against humanity, genocide, and intentional killing of innocent civilians, including men, women, children and babies as well as the elderly and disabled.
3. Without going into the historical background of the U.S Governments' blind support for Israel, which is in excess of the past 75 years, the U.S. Government has recently used purported emergency authority provisions to provide 14 000 tank shells, amongst others, to Israel without Congressional review. In particular, the U.S. Government has indicated that it supposedly used the Arms Export Control Act (presumably P.L. 90-629 as amended through P.L. 117-263, Enacted December 23, 2022, as amended through P.L. 117-263) emergency declaration for the tank rounds worth approximately US\$106.5 million for delivery to Israel early in December 2023. The U.S. Government did this full knowing that thousands of innocent Palestinians, mostly women and children, have been killed, and are still being killed, by the Israeli government under the hand of its armed forces. The tank shells so supplied by the U.S. Government to Israel is part of a bigger sale for which Congressional approval will be sought for the larger arms package worth more than US\$500 million and comprises of, amongst others, 45 000 shells for Israel's Merkava tanks, which tanks are regularly deployed in Israel's offensive in Gaza, which offensive has killed thousands of civilians¹ and which continues to kill civilians on a daily basis.

4. U.S. Policy and international law require that (American) weapons transferred to foreign governments, including Israel, are used in a manner consistent with protecting civilian lives.
5. The world's top international human rights organizations, including US and UK based Amnesty International and Human Rights Watch, have conducted, and presented in-depth legal analysis over the past several years that has found that the Israeli government is committing the crimes of apartheid and persecution as per the legal definitions in international law. See the written motivation for legal proceedings instituted by South Africa in the International Court of Justice (ICJ) which spans some 84 pages, of which you would be aware of, which must be read as duly incorporated herein.

BACKGROUND

6. The Balfour Declaration, which resulted in a significant upheaval in the lives of Palestinians, was issued on 2 November 1917 by the United Kingdom's then Foreign Secretary, Arthur Balfour, supported by the British Government, as well as the U.S. Government, having consulted and having obtained the support of the then U.S. president, Woodrow Wilson.
7. In brief, as you know, the Balfour Declaration was literally the British Government, together with the U.S Government, announcing its support for the establishment of a "national home for the Jewish people" in Palestine, a country, like every other, having its own indigenous people at the time, to the factual detriment of the Palestinian people as seen today.
8. The Balfour Declaration came in the form of a letter from Britain's then foreign secretary, Arthur Balfour, addressed to Lionel Walter Rothschild, a figurehead of the British Jewish community. It was made during World War I (1914 – 1918) and was included in the terms of the British Mandate for Palestine after the dissolution of the Ottoman Empire.

9. For want of brevity, the Balfour Declaration states as follows:

Foreign Office November 2nd, 1917

Dear Lord Rothschild:

I have much pleasure in conveying to you, on behalf of His Majesty's Government, the following declaration of sympathy with Jewish Zionist aspirations which has been submitted to, and approved by, the Cabinet:

His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non- Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.

I should be grateful if you would bring this declaration to the knowledge of the Zionist Federation.

Yours,

Arthur James Balfour

(Own emphasis added)

10. Importantly, the Balfour Declaration became the catalyst and vehicle for the Zionist aim of establishing a Jewish state in Palestine into a reality with the British and U.S. Government's public pledge to establish "a national home for Jewish people" there.

11. With the benefit of time, history has shown that the British and U.S. Governments have certainly used "*their best endeavours to facilitate the achievement of this object*", being the current Jewish state of Israel, but certainly did little to nothing to ensure that "*nothing shall be done which may prejudice the civil and religious rights of existing non- Jewish communities in Palestine*", given the historical, ongoing and current international war crimes committed by Israel and its armed forces against the innocent Palestinian people.

It has happened in south Lebanon, in Gaza and also today in Samaria which we visited. **And therefore I clarify that in every arrangement, any other arrangement in the future the state of Israel will have to control on the entire area from the river to the sea.** This is what happens when you have sovereignty. This truth I say to our American friends. And I also stopped the attempt to impose on us a reality that will jeopardize us. New York Times correspondent Patrick Kingsley reports that Hamas has built up to 450 miles of tunnels in Gaza. He knows this because Israeli officials told him. FACT: The total tunnel length of New York City’s famous sprawling, ramified subway system is 443 miles. FACT: If the Israeli figure is true, then, every 1,250 feet of Gaza along its width, there is another 25-mile-long tunnel stretching across its length. Kingsley didn’t consult a single engineer on the plausibility of this Israeli claim. But the truth is that we are fighting a war for the entire universe, for the free world. 22 January 2024: "Elon Musk says the indoctrination of Gazan children "must stop" for long term peace to be achieved and continues to wear dog tags around his neck in support of the hostages still held by Hamas.

His remarks came during a conversation with conservative American commentator Ben Shapiro shortly after the pair toured Auschwitz death camp together.

The X owner and CEO of Tesla said: "The indoctrination of hate into kids in Gaza has to stop. When I was in Israel, that was my top recommendation. I understand the need to invade Gaza, and unfortunately some innocent people will die, there's no way around it.

"The most important thing is to ensure that afterwards, the indoctrination where kids are taught from as soon as they can understand language, that their goal is to kill Israelis; if you're told that from when you're a toddler, you're going to believe it, and that needs to stop."

Musk and Shapiro appeared during a two-day event in Krakow, Poland, hosted by the European Jewish Association, the first major Jewish conference to Auschwitz since October 7.

Musk further admitted to being "frankly naïve" about the level of antisemitism today. He said: "In the circles I move, I see almost none. Two thirds of my friends are Jewish... I'm Jewish by association." He added that the "pro-Hamas rallies" that took place in cities across the West, "blew" his mind.

Musk recently toured the territories surrounding the Gaza Strip that were invaded by Hamas. He says he brought with him to Israel "three strong recommendations" to achieve peace.

"Obviously, one has to get rid of Hamas fighters where reform is impossible, [where] their only goal is to kill Israelis, they ought to be killed or imprisoned,

otherwise they will simply kill more Israelis. Then the second thing is you've got to change the indoctrination in the schools so that kids are not taught to hate from the moment they are two years old. And the third thing, which is a very hard thing to do in this situation, is conspicuous acts of kindness to the people in Gaza... It's just that much harder to hate someone if they do nice things for you, even if they try to bite your hand when you're doing it, keep doing it."

Elon Musk has continued to wear dog tags around his neck in support of the hostages still held by Hamas, who he hopes are still alive, and says the "most shocking" thing to see in footage from October 7 was Hamas's "delight in killing kids", which requires "a level of indoctrination that is extremely intense."

Before Shapiro and Musk took the stage, Israeli Minister of Diaspora Affairs and Combating Antisemitism, Amichai Chikli, dedicated his speech to Holocaust historian Alex Danzig from Kibbutz Nir Oz, who is still held captive.

Chikli said: "Not far from here, absolute evil singled out the Jewish people as its ultimate enemy. Some imagined that after the unimaginable atrocity of the Holocaust, it would vanish. But it was a merely respite, and that respite has now ended.

"A new generation has emerged, a generation that does not know Auschwitz, this is what moral collapse looks like."

Former president of the State of Israel, Reuven Rivlin, provided the keynote address. He said the responsibility to fight against antisemitism and racism belongs to "the entire free world."

Rivlin led the first roundtable discussion of the European Jewish Association Leaders Forum to Fight Antisemitism and Racism (ELCA), a body created recently which he hoped would act as a "beacon of hope" to the world." —[The Jewish Chronicle](#)

One example would be most recently, the pens that are used for insulin for children have been recently put on that list. In terms of the reasons and rationale for it, I really can't explain what that is because I don't know. We are currently in discussions with the Israeli authorities, COGAT in particular, to look at ways how we can examine that list which they think is prohibited items and find ways how we can get those released because these are going to be essential

Pegasus

Pegasus is a spyware developed by the Israeli cyber-arms company NSO Group that is designed to be covertly and remotely installed on mobile phones running iOS and Android. While NSO Group markets Pegasus as a product for fighting crime and terrorism, governments around the world have routinely used the spyware to surveil journalists, lawyers, political dissidents, and human rights activists.

As of March 2023, Pegasus operators were able to remotely install the spyware on iOS versions through 16.0.3 using a zero-click exploit. While the capabilities of Pegasus may vary over time due to software updates, Pegasus is generally capable of reading text messages, call snooping, collecting passwords, location tracking, accessing the target device's microphone and camera, and harvesting information from apps. The spyware is named after Pegasus, the winged horse of Greek mythology. —[Wikipedia](#)

Peru

In December 2022, Peru's democratically elected President Pedro Castillo was impeached by Peru's Congress. The Peruvian military arrested him and sentenced him to 18 months in prison without a trial or due process of law. The impeachment charge was that President Pedro Castillo had supposedly attempted a coup against himself.

Peru's unelected President is now Dina Castillo, who has been coordinating his government policy with US ambassador to Peru Lisa Kenna, a former CIA agent appointed as ambassador by US President Joe Biden.

The day before the coup, US ambassador Lisa Kenna met with Peru's defense minister to coordinate military arrest of President Pedro Castillo and prevent scheduled elections for Peru's Congress and on a new Constitution to replace the one written by US-backed dictator Alberto Fujimori. Following the coup, ambassador Lisa Kenna has met with Peru's Mining Minister and Energy Minister to bring in Western mining companies.

Peru is the world's second largest producer of copper (about 10% of the world supply), as well as a major producer of gold, zinc, silver, lead, and iron, and as a leading producer of natural gas has been exporting natural gas to Europe to make up for the loss of Russian natural gas after the Biden administration blew up the Nord Stream 1 and Nord Stren 2 pipelines. In 2022 China bought 67.5% of Peru's copper.

There are widespread protests throughout Peru. The Institute of Peruvian Studies (IEP), the nation's leading polling firm, found in April 2023 that 6% of the Peruvian population approves of the Congress and 91% disapprove. 15% of Peruvians support unelected President Dina Boluarte, with 78% disapproving. The Peruvian Congress had disapproval ratings of 89%, 90%, and 91% ub Hanuary, February, and March.

By January 2023, the Peruvian capital of Lima was inundated by protesters, mostly Peru's indigenous people.

The protests, which have been blockading major highways as well as protesting in major cities, has been a grassroots effort without any clear leader.

The Peruvian military has been beating and killing indigenous protesters.

"We are from Chota in Cajamarca. We have come to Lima to defend our country, considering we are under a dictatorial government ... which has stained our country with blood," Yorbin Herrera, a protester from Cajamarca, told Al Jazeera.

"I am upset. Angry. Traumatized and shocked by what is happening here," Luis Garro, another anti-government protester, told Al Jazeera. "I believe that the people are going to force Dina Boluarte and the Congress out."

"The political situation in Peru has several layers ... [and] if you look a bit further down into the social order of things ... this can't just be about one specific moment in 2023, or 2022," Alonso Gurmendi, a lecturer in international relations at the University of Oxford, told Al Jazeera. "There is a long history of exclusion of people from Indigenous descent, and Indigenous people in Peru have been left out of the economic growth [Peru has seen], where even if GDP is growing, and the macroeconomics numbers are doing well, every day people are left alone if they cannot privatise their basic needs. There is no good health care; there is no public housing, [and] public education is not well funded. So the population feels there is a double system and all of these protests boil down to this difference, between the part

of Peru that is able to take advantage of the ‘economic miracle’, and the part of Peru that isn’t, that is still left behind.”

Peru’s Congress is notoriously corrupt and dominated by right-wing oligarchs.

The US, Canada, and mining companies from the US, Canada, Switzerland, and Australia support unelected President Dina Castillo.

14 Latin American nations, including Mexico, Columbia, and Argentinian have condemned the US coup in Peru and expressed support for President Pedro Castillo.

St. Peter’s Church

24 December 2023: “St. Peter’s Church is located in the Town of St. George, Bermuda and is a UNESCO World Heritage Site. It is the oldest Anglican Church outside of the British Isles and the oldest church in continuous use in the New World. Established in 1612 when Bermuda was settled by the Virginia Company, the church was rebuilt many times due to storm damage, and eventually was reconstructed of stone in 1826. In 2012, for the late Queen Elizabeth II’s Diamond Jubilee year, St. Peter’s was granted the royal designation of “Their Majesties Chappell,” a title first used for the church during the reign of King William III and Queen Mary II.” —CIA World Factbook (material that expires after 30 days)

pH

According to the U.S. Department of Interior, the definition of pH is “pH is a measure of how acidic/basic water is. The range goes from 0 - 14, with 7 being neutral. pHs of less than 7 indicate acidity, whereas a pH of greater than 7 indicates a base. pH is really a measure of the relative amount of free hydrogen and hydroxyl ions in the water. Water that has more free hydrogen ions is acidic, whereas water that has more free hydroxyl ions is basic.”

pH was invented by Danish chemist Søren Peder Lauritz Sørensen at the Carlsberg Laboratory in 1909. It was later modified in 1924 to its modern form.

Sørensen wrote the H stands for hydrogen, but he never wrote and said what the p stands for. There is a lot of modern speculation, but nobody will ever know for certain.

Piggly Wiggly

“Piggly Wiggly was the first self-service grocery store. It was founded in 1916 in Memphis, Tennessee.

At the time of its founding, grocery stores did not allow customers to gather their goods. Instead, a customer would give a list of items to a clerk, who would then collect them throughout the store.

Piggly Wiggly introduced the innovation of allowing customers to go through the store, gathering their goods, thus cutting costs and lowering prices. Losses due to easier shoplifting were more than offset by profits from increased impulse purchasing.

This style of grocery store came to be known as a “groceteria”, reminding people of cafeterias, another relatively new, self-service idea.

At its peak in 1932, the company operated 2,660 stores and posted annual sales in excess of \$180 million.” —[charmene harbert](#)

planned obsolescence

“What is planned obsolescence? In short, it is one of the most sinister policies created by humans.

It is the deliberate engineering of goods to deteriorate or become obsolete faster to require replacement and increase profits

The testing ground was the lightbulb when the Phoebus cartel engineered the lifespan from 2,500 hours to just 1,000, drastically increasing sales

Decades later, Apple would agree to pay \$113 million to settle a lawsuit over intentional iPhone slowdowns

We see this with our architecture as well. What’s the fun (\$\$\$) in creating something breathtaking that lasts for thousands of years when you can make dilapidated eyesores that require renovations every 30 seconds?

How is it that the Romans built roads to last thousands of years yet our modern ones require constant maintenance?

I truly believe much of the human condition now, mental illness, chronic illness, is planned obsolescence being extended to humanity by Big Pharma and Big Food for profits

We require a level of “maintenance” (and expensive maintenance at that) we’ve never seen before.” —[Ashley St. Claire](#)

22 December 2023: “Adding richness and depth

One of my favorite tools to add richness, “weight” and depth to my sounds and buses.

Blackbox HG-2” — [Nathaniel W.](#)

NOTE: This is available both as a digital plugin and as an actual hardware device.

28 December 2023: “The mistake I made earlier in my career

There was a point when I first time started to achieve good results.

I found some one working formula for me. Before you destroy me with questions, the formula is not exact chains and presets.

By formula I mean the techniques and plugins that I figured out how to use

And then, I started to apply this everywhere. Whatever song I had, I did pretty much the same things.

As a result, some songs sounded really good, and some sounded really bad.

It depended on the song. If material were a good fit for my method then it worked. If not, then it didn't work. Especially when songs were in different genres. And I lost some artists because of it.

I know it may be very exciting to hear great results for the first time, but please never stick with the methods for all the songs. Keep it in mind, but never think that “you found out a method how to make a good sound and now you don't need anything else”.

As I mentioned earlier today, right now I spend very much time just picking the right tools finding a good fit for the song.

In my current workflow, I'm not trying to equalize and compress the sh*t out of my sounds. That's why I'm not trying to achieve everything with simple EQs and compressors.

I'm trying to do very very little with my tools, but get a massive improvement because of how this tool sounds. I can not affect its character, that's why I pick what will sound the best on the particular song.

This approach allows to get the most out of the initial sound, saving its tone and naturalness, but also color it and fit in the mix. The thing is that the color and character should fit the genre and the composition itself.

The results you will be getting won't compare to working on Pro-Q and Pro-C only, or using the same chains every time. But it's worth it.

I know it sounds complicated but don't think too much about it.

Just don't stop to experiment and don't stop to try new things in new scenarios + listen to what experienced engineers say. What tools and techniques work well in what genres and with what sounds. And so on.

Don't be lazy to set up a few compressors and switch between them to choose which sounds the best.

Same with analog modeled EQs.

At least try some new time to time, and if it's not working then get back to your go-to plugin.

But accumulating experience with different tools and techniques is a must.”

8 January 2024: “An official count of the deaths of homeless people would no longer be published in England and Wales under proposals to increase the efficiency of health data that campaigners have called “callous”.

In a move that advocates for homeless people fear will increase the invisibility of the most vulnerable and amount to sweeping the problem under the rug, the Office for National Statistics is consulting on dropping the annual bulletin, which showed an estimated 741 deaths among homeless people in 2021.

The plan is included in a series of proposed changes to official figures that the ONS says will provide “an improved and more efficient health and social care statistical landscape”.

The homelessness charity Crisis, which is urging the government to make a U-turn, said the plan was “deeply concerning, and will only ensure this needless suffering continues out of sight”.

“The injustice faced by people dying on the street must not go unreported,” said Francesca Albanese, executive director of policy and social change at the charity.

Gill Taylor, who leads an independent project at the Museum of Homelessness counting deaths among homeless people, said the proposal was symbolic of the way the government “sees homelessness as ‘a lifestyle choice’,” a reference to a tweet posted in November by the former home secretary Suella Braverman.

“Now is not the time to be turning away from who these people are and why they died,” she said. “Everywhere in the public sector, change only comes as a result of an evidence base, and without it we are afraid change won’t happen.”

Taylor said scrapping the statistic would be “a very callous thing to do at a time when we know there is an absolute crisis in homelessness and more people are dying”.

The ONS will continue to collect the data on the deaths of homeless people, but will include it in overall mortality figures rather than publishing it separately. It said the data, which has been published since 2018, was experimental and amounted to an estimate.” —[The Guardian](#)

premature optimization

“There is no doubt that the grail of efficiency leads to abuse. Programmers waste enormous amounts of time thinking about, or worrying about, the speed of noncritical parts of their programs, and these attempts at efficiency actually have a strong negative impact when debugging and maintenance are considered. We *should* forget about small efficiencies, say about 97% of the time: premature optimization is the root of all evil.”

“Yet we should not pass up our opportunities in that critical 3%. A good programmer will not be lulled into compacency by such reasoning, he will be wise to look carefully at the critical code; but only *after* that code has been identified. It is often a mistake to make a priori judgments about what parts of a program are really critical, since the universal experience of programmers who have been using measurement tools has been that their intuitive guesses fail. After working with such tools for seven years, I’ve become convinced that all compilers written from now on should be designed to provide all programmers with feedback indicating what parts of their programs are costing the most; indeed, this feedback should be supplied automatically unless it has been specifically turned off.” —Structured Programming With Go To Statements, Donald Knuth

pre-purchased deals

One of the things I learned about narcissist from watching Chip Frye is the pre-purchase of deals.

The narcissist will occasionally offer a “gift”. It is always something the narcissist has extra of. It is not based on the needs or desires of the recipient. It is always something that the narcissist likes and happens to have some extra of.

The reason it isn't merely a thoughtless gift is that the narcissist will eventually use it to demand something the narcissist wants. “I gave you a banana [that was old enough that he would have thrown it away otherwise], it is only fair you do some expensive favor for me.”

I made the mistake of being polite and not rejecting the offer of a gift, even if I didn't want it, just to show respect for the kind thought behind the gift.

It was never really a gift. The narcissist is setting up a future transaction where the narcissist gets to set what it is the narcissist wants in return without the other person realizing that they have entered into a bargain with unfair conditions.

In 1988 Biden dropped out of the presidential race when he was caught plagiarizing British Labour Party leader Neil Kinnock's speech. Biden claimed to have descended from coalminers. His only ancestor in the coal industry was Patrick F. Blewitt, a boss, not a coal miner.

Biden voted for NAFTA, supported the Trans-Pacific Partnership, authored the 2005 bankruptcy law, and authored the mass incarceration law.

During 2011 Biden refused to speak out against then Wisconsin Governor Scott Walker's attacks on unions.

During the 2011 Verizon strike, Biden refused to support the strike.

Biden telling a Michigan auto union worker 10 March 2020 at a Fiat Chrysler assembly plant: “You’re full of shit. No, shush, shush. Don’t tell me that, pal, or I’m going to go outside with you man. I’m not working for you. Gimme a break man. Don’t be such a horse’s ass.”

On 22 December 2022, Joe Biden signed a bill to block the railroad unions from striking and denying RR workers sick days.

Biden has a history of speaking before labor unions, but only when he wants something from them.

19 March 2023: **Explanation:** To see the feathered serpent descend the Mayan pyramid requires exquisite timing. You must visit El Castillo -- in Mexico's Yucatán Peninsula -- near an equinox. Then, during the late afternoon if the sky is clear, the pyramid's own shadows create triangles that merge into the famous illusion of a slithering viper. Also known as the Temple of Kukulcan, the impressive step-pyramid stands 30 meters tall and 55 meters wide at the base. Built up as a series of square terraces by the pre-Columbian civilization between the 9th and 12th century, the structure can be used as a calendar and is noted for astronomical alignments. 100 seconds into flight. Our next major activity is going to be shutdown of the first stage. Houston tracking station now acquiring the vehicle. We're shut down. We will get separation of Starship and Super Heavy and ignition of the Starship engines. When Starship separates, we light up six engines in a staggered sequence. And if all goes well, those six engines will burn for almost 6 and 1/2 minutes. Onboard view from Starship.

[CHEERING]

And there's views of the Raptor engines on the second stage as we prepare for stage separation. Now after stage separation, the first stage will flip and begin a boost back maneuver for landing in the Gulf.

Continuing to fly 2 minutes, 40 seconds. Let's get ready for main engine cutoff.

Booster engine cutoff.

- Beginning to flip for stage separation.

[CHATTER]

- As of right now, we are awaiting stage separation where Starship should separate from the Super Heavy booster.

- Yeah, Kate, right now it looks like we saw the start of the flip. But obviously, we're seeing from the ground cameras the entire Starship stack continuing to rotate. We should have had separation by now. Obviously, this is-- does not appear to be a nominal situation.

- Yeah, it does appear to be spinning. But I do want to remind everyone that everything after clearing the tower was icing on the cake.

[CROWD REACTS]

[APPLAUSE]

- Oh. There-- [LAUGHS] and there, as you saw, as we promised, an exciting end to the Starship inaugural integrated test flight.

“We were just happy to get it off the launch pad successfully,” wasn’t the originally stated goal, but I suppose when everything goes to shit, it’s nice to be able to gaslight people into accepting every failure as a purposeful genius move. —[Johnny Akzam](#)

The Federal Aviation Administration (FAA) stated “The FAA will oversee the mishap investigation of the Starship / Super Heavy test mission. A return to flight of the Starship / Super Heavy vehicle is based on the FAA determining that any system, process, or procedure related to the mishap does not affect public safety” and added this is “standard practice for all mishap investigations.”

SpaceX’s statement “At 8:33 a.m. CT, Starship successfully lifted off from the orbital launch pad for the first time. The vehicle cleared the pad and beach as Starship climbed to an apogee of ~39 km over the Gulf of Mexico & the highest of any Starship to-date. The vehicle experienced multiple engines out during the flight test, lost altitude, and began to tumble. The flight termination system was commanded on both the booster and ship. As is standard procedure, the pad and surrounding area was cleared well in advance of the test, and we expect the road and beach near the pad to remain closed until tomorrow.”

That Elon Musk rocket succeeded only in raining down rocket fuel on the Gulf Coast and yet the news stories still frame it as a partial success or a successful failure. So stupid —[Brett Chapman](#)

my comment: There are a bunch of photos of the robot dog, but this one particularly caught my eye. I personally find this KNBC-TV Los Angeles photo to be disturbing. I can guess the intent of KNBC-TV in choosing this particular photo. The lighting seems very corporate, as if the photographer is trying make the robot dog seem mundane and ordinary. The photographer chose an angle from above, which normally causes the subject of the photo to be weakened and diminished. It is clear that both the

photographer and KNBC-TV are trying to diminish the shocking horror inherent in the robot itself.

Putin's decree was released by the Kremlin on Friday and took force immediately. It brings the overall number of Russian military personnel to about 2.2 million, including 1.32 million troops.

It is the second such expansion of the army since 2018. The previous boost by 137,000 troops, ordered by Putin in August 2022, put the military's numbers at about 2 million personnel and about 1.15 million troops.

saturation

14 January 2024: “Why you can’t hear saturation?

Did you notice that sometimes you add saturation and can’t hear ANY difference before it reaches certain amount

Well, it is not because you are deaf.

The problem is that you probably don’t have monitors/headphones with low enough harmonic distortion characteristics

The speaker ÒsaturatesÓ the sound on its own, and the saturation you add masks by speaker saturation

You will start hearing saturation after it’ll become significantly more than speakers THD

Many people come to the studio and tell “aye bro what’s wrong with your speakers, my mix sounded way cleaner”

Well it’s not the speakers, it’s the fact that you can clearly hear the actual distortion on higher class monitoring systems

The lesson here?

Don’t add saturation just because someone told you to do so

Be careful with adding saturators on top of the analog modeled plugins that already introduce fair amount of saturation.

On the picture, Amphion monitors. They use aluminum woofers which makes them very robust yet very light, allowing the speaker to move very quickly with extremely low distortion. Helping engineers, including myself, to hear the sound very cleanly and

make more accurate mixing decisions, including adding saturation and distortion exactly at needed and desired amounts.” —[Nathaniel W.](#)

Scavenger hunts are fun for a variety of reasons:

1. **Challenge and problem-solving:** Scavenger hunts often require participants to solve riddles, puzzles, or clues to locate the items on their list. This adds an element of problem-solving, which can be both challenging and enjoyable.
2. **Social interaction and teamwork:** Scavenger hunts are often played in teams, which encourages cooperation, communication, and collaboration. This aspect of the game can foster bonding and help strengthen relationships among participants.
3. **Exploration and discovery:** Scavenger hunts encourage participants to explore their surroundings and discover new places or things. This can be particularly exciting and satisfying for those who enjoy adventure or learning about their environment.
4. **Physical activity:** Participants often need to walk, run, or even bike to find the items on their list, making scavenger hunts a fun way to get some exercise and enjoy the outdoors.
5. **Competition:** The competitive aspect of scavenger hunts can be thrilling for many players, as they race against other teams to complete their lists and win the game.
6. **Creativity:** Scavenger hunts can be customized to include unique and interesting items, allowing players to engage their creativity and imagination.
7. **Sense of accomplishment:** Successfully locating items on a scavenger hunt list can provide a sense of achievement, which is rewarding and motivating for players.
8. **Adaptability:** Scavenger hunts can be tailored to suit various ages, group sizes, and settings, making them a versatile and enjoyable activity for a wide range of participants.

U.N. Security Council

I strongly recommend that the permanent members of the U.N. Security Council, with veto power, be expanded to include Brazil, Germany, India, and Japan.

GADDAFI (2009): “We joined the United Nations because we thought we were equals, only to find that one country can object to all the decisions we make. Who gave the permanent members their status in the Security Council? Four of them granted this status to themselves.

The only country that we in this Assembly elected to permanent member status in the Security Council is China. This was done democratically, but the other seats were imposed upon us undemocratically through a dictatorial procedure carried out against our will, and we should not accept it.” —[COMBATE](#)

semiconductor

8 August 2023: “America invented semiconductors when we went to the moon. Today, they power our everyday lives.

Over time, our manufacturing was hollowed out. We went from producing nearly 40% of microchips down to 10%, but thanks the CHIPS and Science Act, production will be brought back home.” —[President Biden](#)

Correction to Biden's Lies: The semiconductor was invented by a German Karl Ferdinand Braun in 1874, the Semiconductor transistor was invented in US in 1947, and the Integrated circuit in 1958 also in US. all well before going to the moon.

The CHIPS money (about \$280 billion) went to a handful of large corporations that had made major campaign donations to Joe Biden and/or the Democratic Party. The money was almost all no strings attached and every company receiving the money spent some or all of the money on stock buybacks, not on semiconductor factories. After the law was passed (and therefore, no longer could be changed), Senator Elizabeth Warren complained the money had no strings attached.

Semitic

3740: “The evolution of languages provides a unique opportunity to study human population history. The origin of Semitic and the nature of dispersals by Semitic-speaking populations are of great importance to our understanding of the ancient history of the Middle East and Horn of Africa. Semitic populations are associated with the oldest written languages and urban civilizations in the region, which gave rise to some of the world's first major religious and literary traditions. In this study, we employ Bayesian computational phylogenetic techniques recently developed in evolutionary biology to analyse Semitic lexical data by modelling language evolution and explicitly testing alternative hypotheses of Semitic history. We implement a relaxed linguistic clock to date language divergences and use epigraphic evidence for the sampling dates of extinct Semitic languages to calibrate the rate of language evolution. Our statistical tests of alternative Semitic histories support an initial divergence of Akkadian from ancestral Semitic over competing hypotheses (e.g. an African origin of Semitic). **We estimate an Early Bronze Age origin for Semitic approximately 5750 years ago in the Levant, and further propose that contemporary Ethiosemitic languages of Africa reflect a single introduction of early Ethiosemitic from southern Arabia approximately 2800 years ago.**

Semitic languages comprise one of the most studied language families in the world. Semitic is of particular interest due to its association with the earliest civilizations in Mesopotamia (Lloyd 1984), the Levant (Rendsburg 2003) and the Horn of Africa (Connah 2001), which gave rise to several of the world's first major religious traditions (Judaism, Christianity and Islam) and literary works (e.g. the Akkadian poem *The epic of Gilgamesh*). The importance of Semitic dates back at least 4350 years before present (YBP) to ancient Sumer in Mesopotamia, where the Akkadian language replaced Sumerian (Buccellati 1997). From this time forward, archaeological evidence for Semitic among the Hebrews and Phoenicians in the Levant (Diakonoff 1998; Rendsburg 2003) and the Aksumites in the Horn of Africa (Connah 2001) suggests that Semitic-speaking populations and their languages underwent a complex history of geographical expansion, migration and diffusion tied to the emergence of the earliest urban civilizations in these regions (Lloyd 1984; Connah 2001; Richard 2003b; Nardo 2007). Uncertainties about key details of this history persist despite extensive archaeological, genetic and linguistic studies of Semitic populations. A more comprehensive understanding of the precise origin and relationship of Semitic populations to each other is necessary to fully appreciate their complex history.

Although multiple genetic studies of extant Semitic-speaking populations have been conducted (Nebel et al. 2002; Capelli et al. 2006), much is still unknown about the genealogical relationships of these populations. Most previous genetic studies focus on time frames that are either too recent (the origin of Jewish communities in the Middle East and Africa; Hammer et al. 2000; Nebel et al. 2001; Rosenberg et al. 2001) or too ancient (the out-of-Africa migration of modern humans; Passarino et al. 1998; Quintana-Murci et al. 1999) to provide insight about the origin and dispersal of Semitic languages and Semitic-speaking populations.

Previous historical linguistic studies of Semitic languages have used the

comparative method to infer the genealogical relationships of Semitic (for review, see Faber 1997). The comparative method is a technique that uses the pattern of shared, derived changes in language (vocabulary, syntax or grammar), termed innovations, to assess the relative relatedness of languages, although this method cannot date the divergences between languages (Campbell 2000). Cognates, which are words that generally share a common form and meaning through descent from a common ancestor (e.g. the English word 'night' is a cognate with the German word 'Nacht'), serve as the data used most often in comparative analyses.

The field of Semitic linguistics has generally coalesced around a model that places the ancient Mesopotamian language Akkadian as the most basal lineage of Semitic (Hetzron 1976; Faber 1997). This standard model divides Semitic into East Semitic, composed of the extinct Akkadian and Eblaite languages, and West Semitic, consisting of all remaining Semitic languages that are distributed from the Levant to the Horn of Africa. West Semitic is in turn divided into South (consisting of Ethiosemitic, Epigraphic South Arabian and Modern South Arabian (MSA)) and Central linguistic groups, but the genealogical relationships of the languages within these two groups are poorly defined (Huehnergard 1990, 1992; Rodgers 1992; Faber 1997). Additionally, no consensus exists for placing Arabic in either the Central or South Semitic group (Hetzron 1976; Blau 1978; Diem 1980; Huehnergard 1990, 1992; Faber 1997), which makes Arabic's genealogical location simultaneously uncertain and interesting, as Central and South Semitic are geographically and genealogically distinct entities.

Dating language divergences has been controversial, especially when linguistic clocks are involved (for discussion, see Renfrew et al. 2000). The existence of a linguistic clock is controversial as it assumes that languages evolve at a fixed rate (Ehret 2000), whereas there is evidence for variation in rates of change between words and languages and no reason why languages should evolve at fixed rates (Blust 2000). However, recent studies have shown that much variation in the rates of linguistic change may follow generalized rules that apply across language families (Pagel et al. 2007; Atkinson et al. 2008). This suggests that variation in the rates of change between words and languages can be modelled by applying techniques used in evolutionary biology (e.g. probabilistic modelling of relative rates of word change with relaxed clock or covarion models of language evolution). Computational phylogenetic methods such as these are consistent with the philosophical underpinnings of the linguistic comparative method (i.e. inferring relationships by the comparison of similar features between languages) and provide an objective statistical framework to accurately estimate language divergences. Furthermore, Bayesian phylogenetic methods offer distinct advantages by allowing for the inclusion of multiple lines of evidence as prior probabilities, incorporating the uncertainty of model parameters in posterior probability estimates, and providing straightforward statistical comparisons of models via Bayes factors (BFs).

In this study, we analyse lexical data from 25 Semitic languages distributed throughout the Middle East and Horn of Africa (figure 1) using a Bayesian phylogenetic method to simultaneously infer genealogical relationships and estimate

integrated model of Semitic history.” — [Bayesian phylogenetic analysis of Semitic languages identifies an Early Bronze Age origin of Semitic in the Near East](#)

Map of Semitic languages and inferred dispersals. The locations of all languages sampled in this study, both extinct and extant, are depicted on the map. The current distribution of Ethiosemitic languages follows Bender (1971) and distribution of the remaining languages follows Hetzron (1997). The ancient distribution of extinct languages is also indicated (i.e. Akkadian, Biblical Aramaic, Ge'ez, ancient Hebrew and Ugaritic; Bender 1971; Hetzron 1997). The West Gurage (Chaha, Geto, Innemor, Mesmes and Mesqan) and East Gurage (Walani and Zway) Ethiosemitic language groups in central Ethiopia are depicted as two combined groups. The map also presents the dispersal of Semitic languages inferred from our study. An origin of Afroasiatic along the African coast of the Red Sea,

2) are placed on the arrows to indicate where and when these divergences occurred.

Phylogeny of Semitic languages. Our phylogeny of 25 Semitic languages based on binary encoded data is presented with mean divergence times to the right of each node and 95% HPD intervals indicated by light grey bars. The scale bar along the bottom of the phylogeny presents time in YBP. Posterior probabilities of branches are printed in italics above each branch with >0.75 support. Extinct languages are underlined and all other languages are considered to evolve to the present. Subgroups of Semitic are identified by colour bars to the right of the phylogeny (purple bars, East Semitic; green bars, Central Semitic; red bars, MSA; and blue bars, Ethiosemitic) and by three boxes (West, Central and South Semitic). Important nodes are indicated by letters: A, West Semitic; B, Central Semitic; C, UgariticÐHebrewÐAramaic; D, Arabic; E, South Semitic; F, MSA; and G, Ethiosemitic. The dashed line leading to Arabic reflects the fact that log₂BF tests were equivocal in the placement of Arabic, so we placed Arabic in Central Semitic based on previous linguistic studies (e.g. Hetzron 1976; Faber 1997). The topology is rooted with Akkadian, which is preferred by our log₂BF analyses, and follows the constraints of the standard model.

The major Semitic languages are: Arabic, Amharic (spoken in Ethiopia), Tigrinya (spoken in Ethiopia and Eritrea), Hebrew, Tigre (spoken in Sudan), Aramaic (spoken in Lebanon, Syria, Israel, Iraq and Iran) and Maltese.

“Senet Game Board of Tutankhamun

King Tutankhamun was buried with no fewer than five senet game boxes. Senet was an ancient Egyptian board game popular with all classes.

Archaeological evidence reveals that senet was played by both royalty (as demonstrated by this elaborate ivory set) and commoners (crude boards scratched in rock). The course of the game was thought to parallel the course of the deceased through the underworld.

The ancient Egyptians believed in an afterlife, which means an existence after death. To reach the afterlife, a person who died had to perform certain rituals and pass many obstacles.

In the New Kingdom, the game senet, which means “passing,” became associated with the journey to the afterlife.

Its full ancient name was senet net hab, which means ‘game of passing through’; this is because the aim of the game is to get from one end of the board to the other.”

shibari

Shibari, also known as Kinbaku, is a form of Japanese rope bondage. It’s important to understand that Shibari is not just about tying knots but is deeply rooted in culture, aesthetics, and communication between the participants.

Safety is crucial in Shibari, as with any form of bondage or BDSM play. It’s important to be aware of nerve pathways when applying ropes and to always have safety shears at hand to quickly release someone if needed. Moreover, practicing Shibari requires mutual consent, trust, and communication between all parties involved. It’s often recommended to learn from experienced practitioners or through reputable workshops to ensure both safety and understanding of the art.

28 August 2023: “In a country with low social mobility, like the USA, most people will die in the same or similar economic situation they were born into.

Once you count in race, gender, disability, and other factors, it's possible to predict fairly accurately the economic fortunes of a baby when it is born.

There are outliers of course. People who succeed despite their situation, or on the other end, people who fail despite being born with many advantages.

But they are few and far between.

The chances of being born into the lowest economic 20% and ending up in the highest 20% are about 1 in 20.

In the land of opportunity, the biggest opportunity is being born rich.

What's worse, the trend in the US is towards even less social mobility.

The American Dream is a myth. And it's becoming more and more so.

Again, there are exceptions and the exceptionally lucky can win this lottery, but as a system it is completely broken.

Not surprisingly, countries with strong social nets, free healthcare, free schools, etc create much better chances for people to succeed despite their family status at birth.

The top 10 countries with the most social mobility in the world are all in Europe, with the Scandinavian countries taking the top 5 spots.

Some people demeaningly call these countries socialist, although they all have very strong capitalist markets.

Most importantly they create more equal playing fields. A chance to succeed for more people. No matter their status at birth.” —[Halli](#)

sound descriptions

1 December 2023: “Sound descriptions

There are a lot of them, here are 10.

1. Warm: Refers to a sound that is full, rich, and pleasing. It often involves a balance of low and mid-range frequencies.
2. Bright: Indicates a sound that is clear, sharp, and contains prominent high

frequencies. It can add a sense of clarity and presence.

3. Creamy: Describes a smooth and velvety sound. It's a subjective term used to describe a pleasant sonic texture.

4. Rich: Signifies a sound with a full spectrum of frequencies and harmonics, providing depth and complexity. A rich sound is often considered full-bodied and immersive.

5. Harsh: Refers to a sound that is grating, strident, or unpleasant. It usually involves an excess of high frequencies that can be piercing to the ears.

6. Mellow: Indicates a soft, smooth, and gentle sound. A mellow tone often lacks harshness or sharpness, creating a soft tone.

7. Crisp: Describes a sound with clear, well-defined transients, especially in the high frequencies. It's associated with sharpness and precision.

8. Boomy: Refers to a sound with excessive low frequencies, often resulting in a muddy or overpowering quality. It can lack clarity and definition.

9. Sibilant: Describes a sound that emphasizes hissing or sharp "s" and "sh" sounds. It can be an issue in audio when these frequencies are overly pronounced.

10. Hollow: Indicates a sound lacking fullness, often with an emphasis on mid-range frequencies. It can create a sense of emptiness or muddiness in the audio.

These terms are subjective and can vary based on individual preferences and the context in which they are used." —[Nathaniel W.](#)

sound finder

7 December 2023: "Before the development of radar, military personnel relied on various methods to detect and track incoming enemy aircraft.

One such method involved utilizing "sound finders," also known as acoustic locators. These devices, which resembled large funnels or megaphones, were positioned strategically to intercept the sound waves emitted by approaching airplanes. There were even portable versions.

Sound finders worked by employing the principle of triangulation. By analyzing the subtle differences in the sound reaching each of the device's two or three horns, operators could pinpoint the approximate direction of the sound source. The closer the aircraft was, the more pronounced the difference in sound intensity between the horns. This information was then relayed to anti-aircraft batteries, allowing them to anticipate the enemy's approach and prepare their defenses.

Sound finders were initially deployed during World War I, particularly in the early stages of aerial warfare. While they provided valuable information about the enemy's position, they were not without their limitations. Their effectiveness was hampered by factors such as atmospheric conditions, background noise, and the complexity of interpreting the subtle sound variations. Additionally, sound finders were primarily suitable for detecting low-flying aircraft, as higher-flying planes were more difficult to

discern against the background noise.

The advent of the first practical radar systems sent the sound finder into the oblivion and what we have is mostly photos depicting that short stretch of time.”

Unofficial

No. 2023/77

29 December 2023

The Republic of South Africa institutes proceedings against the State of Israel and requests the Court to indicate provisional measures

THE HAGUE, 29 December 2023. South Africa today filed an application instituting proceedings against Israel before the International Court of Justice (ICJ), the principal judicial organ of the United Nations, concerning alleged violations by Israel of its obligations under the Convention on the Prevention and Punishment of the Crime of Genocide (the “Genocide Convention”) in relation to Palestinians in the Gaza Strip.

According to the Application, “acts and omissions by Israel . . . are genocidal in character, as they are committed with the requisite specific intent . . . to destroy Palestinians in Gaza as a part of the broader Palestinian national, racial and ethnical group” and that “the conduct of Israel — through its State organs, State agents, and other persons and entities acting on its instructions or under its direction, control or influence — in relation to Palestinians in Gaza, is in violation of its obligations under the Genocide Convention”.

The Applicant further states that “Israel, since 7 October 2023 in particular, has failed to prevent genocide and has failed to prosecute the direct and public incitement to genocide” and that “Israel has engaged in, is engaging in and risks further engaging in genocidal acts against the Palestinian people in Gaza”.

South Africa seeks to found the Court’s jurisdiction on Article 36, paragraph 1, of the Statute of the Court and on Article IX of the Genocide Convention, to which both South Africa and Israel are parties.

The Application also contains a Request for the indication of provisional measures, pursuant to Article 41 of the Statute of the Court and Articles 73, 74 and 75 of the Rules of Court. The Applicant requests the Court to indicate provisional measures in order to “protect against further, severe and irreparable harm to the rights of the Palestinian people under the Genocide Convention” and “to ensure Israel’s compliance with its obligations under the Genocide Convention not to engage in genocide, and to prevent and to punish genocide”.

Pursuant to Article 74 of the Rules of Court, “[a] request for the indication of provisional measures shall have priority over all other cases”.

- Yeah, Kate, right now it looks like we saw the start of the flip. But obviously, we're seeing from the ground cameras the entire Starship stack continuing to rotate. We should have had separation by now. Obviously, this is-- does not appear to be a nominal situation.

- Yeah, it does appear to be spinning. But I do want to remind everyone that everything after clearing the tower was icing on the cake.

[CROWD REACTS]

[APPLAUSE]

- Oh. There-- [LAUGHS] and there, as you saw, as we promised, an exciting end to the Starship inaugural integrated test flight.

“We were just happy to get it off the launch pad successfully,” wasn’t the originally stated goal, but I suppose when everything goes to shit, it’s nice to be able to gaslight people into accepting every failure as a purposeful genius move. —[Johnny Akzam](#)

The Federal Aviation Administration (FAA) stated “The FAA will oversee the mishap investigation of the Starship / Super Heavy test mission. A return to flight of the Starship / Super Heavy vehicle is based on the FAA determining that any system, process, or procedure related to the mishap does not affect public safety” and added this is “standard practice for all mishap investigations.”

SpaceX’s statement “At 8:33 a.m. CT, Starship successfully lifted off from the orbital launch pad for the first time. The vehicle cleared the pad and beach as Starship climbed to an apogee of ~39 km over the Gulf of Mexico Ð the highest of any Starship to-date. The vehicle experienced multiple engines out during the flight test, lost altitude, and began to tumble. The flight termination system was commanded on both the booster and ship. As is standard procedure, the pad and surrounding area was cleared well in advance of the test, and we expect the road and beach near the pad to remain closed until tomorrow.”

That Elon Musk rocket succeeded only in raining down rocket fuel on the Gulf Coast and yet the news stories still frame it as a partial success or a successful failure. So stupid —[Brett Chapman](#)

static mix

24 December 2023: “What’s a static mix?

+ 1 technique how to achieve a good static mix

Static mix is a rough mix that is done on the first step of mixing. It is done by using only level and pan.

The purpose of it is to set the balancing, to have a good understanding of what you going to work with, and hear all of the potential problems.

It is important to do it before reaching out to EQs and compressors, because you don't want to process sounds for no reason.

Only if it doesn’t sound right in a good static mix, then it gets fixed with further processing.

Technique to get a good static mix

1. Move all your faders (physically or in a DAW, doesn’t matter) all the way down
2. Start bringing your sounds up, one by one.
3. Usually I start with kick, bass, snare, rest of the drums. Then melody, from most important instruments to least important. Then vocals. From lead, to doubles, and then adlibs.

Sculpt your mix by yourself. When you hear everything together from the beginning, you will more likely miss something, distracted by all variety of sounds.”

13 January 2024: “Making a sound to perceive from left and right sides simultaneously

You know that if anything sounds from L and R channels at the same time it perceives in the center

But how you can make anything to sound from left and right instead of the center? Very easy.

You should delay one of the channels (L or R).

Since we usually consume information left to right, I prefer to delay the right channel and it sounds more natural in my opinion.

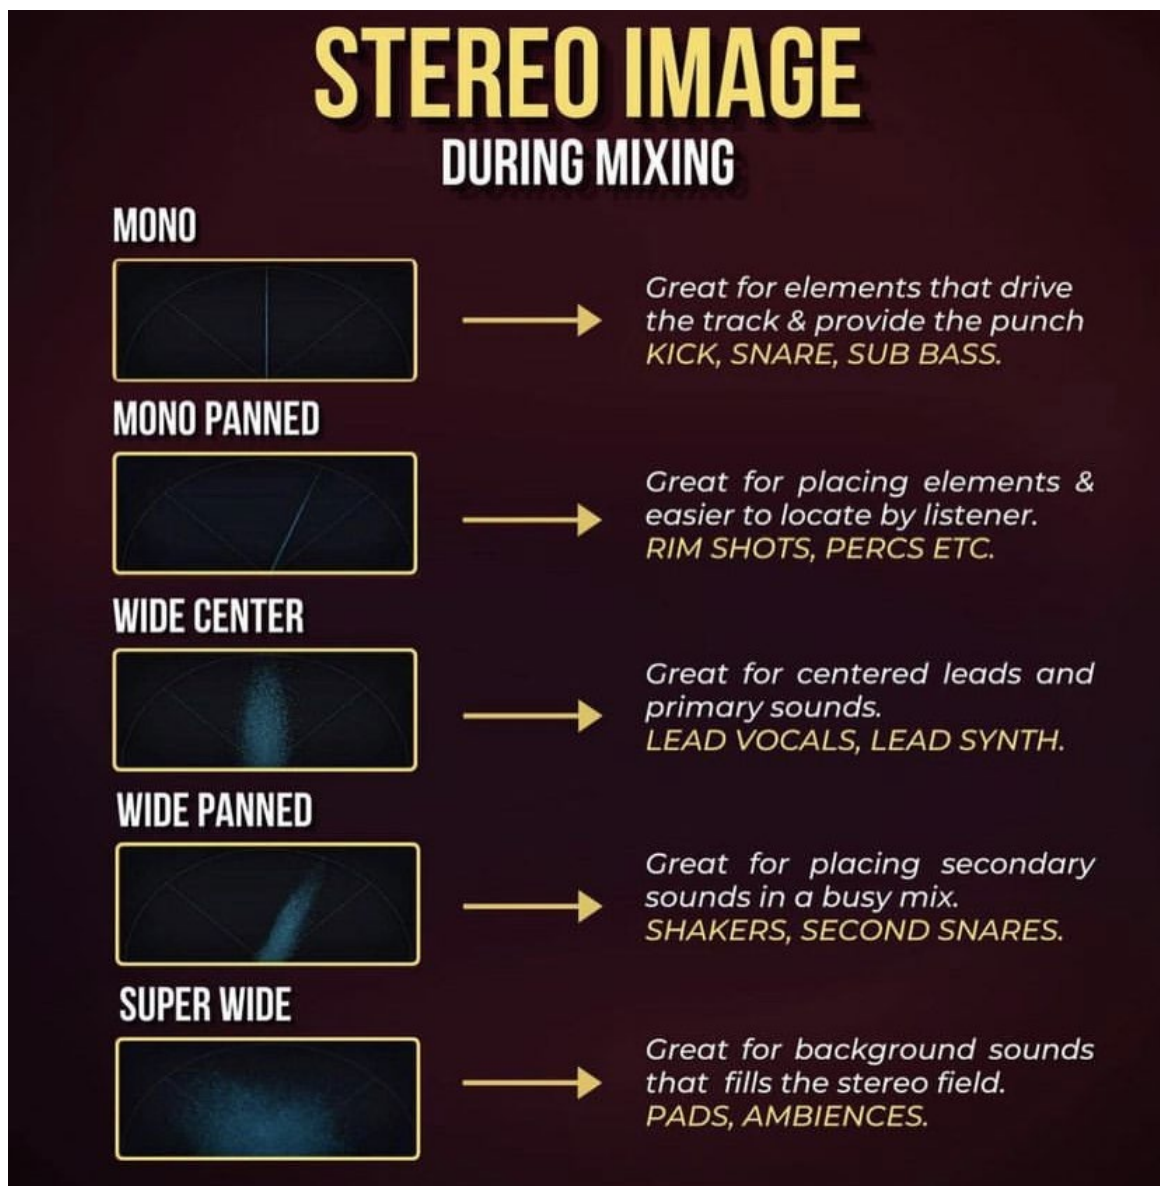

Use 15 to 40 ms delay on one of the channels. It is not enough for our brain to start thinking that these are different sounds. But it's enough to stop the element from sounding in the center and start sounding from left and right simultaneously.

I use SSL X-Phase plugin to do it. But basically it is achievable with stock plugins in most DAWs.” — [nathaniel W.](#)

stem-like cells

25 August 2023: “Stem-like CD8 T cells develop during periods of persistent antigen exposure. During chronic infection and cancer, therapies can stimulate their differentiation into antigen-specific cells with effector function; yet factors controlling the integrity of the stem-like T cell pool were unknown. Studying chronic viral infection in mice, Humblin *et al.* found that the co-stimulatory molecule CD28 regulated metabolism of stem-like CD8 T cells expressing the inhibitory receptor PD-1 to promote self-renewal and differentiation. In companion work, Gill *et al.* found that PD-1 blockade, while promoting effector cell differentiation, likewise stimulated the self-renewal of these stem-like CD8 T cells, maintaining the size and functionality of the progenitor pool. Thus, immune checkpoint therapies may rejuvenate immune responses without diminishing the durability of the stem-like CD8 T cells that respond to treatment.” —[Science Immunology](#)

strike

US Supreme Court: +-21-1449 Glacier Northwest, Inc. v. Teamsters (06/01/2023): On Thursday, 1 June 2023, the US Supreme Court ruled 8-1 that if workers go on strike and it costs the business money, the business can go to court and sue the workers for damages.

The one dissenting judge, Ketanmji Brown, stated: “Nor was the onus of protecting Glacier’s economic interests if a strike was called in the middle of the day on the drivers—it was, instead, on Glacier, which could have taken any number of prophylactic, mitigating measures. What Glacier seeks to do here is to shift the duty of protecting an employer’s property from damage or loss incident to a strike onto the striking workers, beyond what the Board has already permitted via the reasonable-precautions principle. In my view, doing that places a significant burden on the employees’ exercise of their statutory right to strike, unjustifiably undermining Congress’s intent. Workers are not indentured servants, bound to continue laboring until any planned work stoppage would be as painless as possible for their master. They are employees whose collective and peaceful decision to withhold their labor is protected by the NRLA even if economic injury results.”

“BREAKING: The Supreme Court has ruled in favor of a concrete company that wanted to sue a union because a strike cost them money. The 8-1 decision means the company, Glacier Northwest Inc., can sue the union over a strike where truck drivers left wet concrete in their trucks.” —[More Perfect Union](#)

student debt

Regarding the student loan debt matter: The first free taxpayer-supported public school in North America, the Mather School, opened in Dorchester, Massachusetts, in 1639. By 1850, free public school rapidly started spreading across the US. Every state in the union had free public higher education from 1862 to 1969. Free public education was considered a basic human right until California Governor Ronald reagan decided that free public college was “welfare” for Black students. There never should have been tuition being charged at public schools. There never should have been a movement where experienced bankers tricked teenagers into serious long term financial obligations. Joe Biden should have never as a senator written the law that made it impossible to go into bankruptcy over student, medical, or credit card debt.

In my radical opinion every human being who is denied the right to student loan bankrutcy should be guaranteed the absolute right to a free mercy execution and Joe Biden should be required to personally kill everyone who applies for the mercy

execution, streamed live over the internet with every one of his 232 billionaire donors and the CEOs of every corporation that donated to Biden being required to appear on the stream after each execution and state “I paid money to support Joe Bidens campaign to murder poor people.”

nuclear submarines

18 March 2023: "Front page of the Sunday Age accidentally does the meme. According to war secretary Marles, Australia is spending hundreds of billions of dollars to protect our trade with China... from China.

Australian natsec journalism is just becoming one uninterrupted stream of accidental internet memes. Again, the only possible explanation for the completely irrational way that Australia is sacrificing its own economic and security interests by aiding in the US empire's encirclement of China is that Australia is more afraid of the US than of World War 3.

It's not something we're all necessarily consciously aware of, in the same way you don't necessarily think about how you'll do whatever it takes to stay on any bully's good side. But that's what's happening, and if we really think about it we see that it's undeniable.

If we're really honest with ourselves, we see it, and we can never unsee it. Australia

is not arming itself against China to protect itself from China. Australia is arming itself against China to protect itself from the United States.

That's the only possible explanation for the ridiculous, self-evidently contradictory nature of our policies on China. We're more afraid of the US than going to war with a nation who has nuclear warheads and the ability to completely flatline our economy."

Sudan has more pyramids than any other nation, 255. Egypt is next with 138.

United States attacked Sudan in 1998.

20 August 1998: “On the 20th of August 1998, US President Bill Clinton ordered a cruise missile attack on Sudan’s Al Shifa factory, which produced 90% of the country's pharmaceuticals. Germany’s ambassador to Sudan at the time, Werner Daum, stated that the loss of the factory resulted in the deaths of tens of thousands

from treatable diseases.

The administration of President Bill Clinton justified the attacks, based on the grounds that the al-Shifa plant was involved with processing the deadly nerve agent VX, and had ties with the Islamist al-Qaeda group of Osama bin Laden.

These justifications for the bombing were disputed by the owners of the plant, the Sudanese government, and other governments.

American officials later acknowledged “that the evidence that prompted President Clinton to order the missile strike on the Shifa plant was not as solid as first portrayed.”

Officials later said that there was no proof that the plant had been manufacturing or storing nerve gas, as initially suspected by the Americans, or had been linked to Osama bin Laden, who was a resident of Khartoum in the 1980s.” —[Morbid Knowledge](#)

Sun

Our sun produces a wide range of light frequencies, with predominate frequency coming off the sun being approximately green. It looks yellow from inside the Earth’s atmosphere because the air filters out a lof of the blue light and the remaining mixture of frequencies looks yellow (becoming orange or red with more atsmosphere near

sunrise and sunset). From near earth orbit, the sun looks white because of the wide range of frequencies mixing together in our eyes.

The Sun is not on fire. Fire is a chemical reaction. The Sun has a nuclear reaction.

24 August 2023: “Plasma is constantly streaming away from the Sun, forming the solar wind. A likely source of this plasma is coronal holes, regions of the Sun’s corona with magnetic field lines that open outward. Chitta *et al.* observed a coronal hole in the extreme ultraviolet using the Solar Orbiter spacecraft and identified several types of small-scale jets within it (see the Perspective by Ugarte-Urra and Wang). Large numbers of jets occurred during the observation, but each one lasted only a few dozen seconds. The authors calculated that the jets provide enough energy and plasma to supply a large fraction of the solar wind, at least during quiet periods.” —[Science](#)

tag editors

This is a short discussion on the subject of MP3 tags and tag editors.

The unofficial (but widely supported) system is ID3 (this was originally MP3 specific).

The original version was 128 bytes long.

30 bytes each for the title, artist, album, and a "comment", 4 bytes for the year, and

1 byte to identify the genre of the song from a predefined list of values

Later the ability to store track number on an album was added.

Then most of the fields were expanded from max of 30 characters to max of 60.

Then an optional frame system (now up to 83), where each frame can be as 16MB with a max of all frames being 256MB.

The most recent features include two different lyrics standards so that you can store your entire lyrics with the song and a chapters standard where you can synchronize a slide show of images and titles with an audio podcast.

The vast majority of MP3 players will allow you to create the early standard tags.

Some MP3 players and audio programs will allow you to use more of the tag features.

There are dedicated programs called "tag editors" that cover all the features.

Many of the tag editors are free.

Temporary Assistance for Needy Families (TANF)

On 17 May 2023 U.S. President Joe Biden met with House Speaker Kevin McCarthy and proposed imposing stronger work requirements on recipients of Temporary Assistance for Needy Families (TANF).

Joe Biuden was one of 78 senators who voted for then-President Bull Clinton's 1996 "welfare reform package". The law eliminated the U.S.'s main welfare program and replaced it with Temporary Assistance for Needy Families (TANF), requiring states to force a designated percentage of those receiving cash aid to participate in work-related activities.

The word “to” has multiple meanings and can serve different grammatical functions depending on its context. Here are some common definitions and uses of the word “to”: [ChatGPT]

1. **Preposition:** “To” is often used as a preposition to indicate direction, movement, or location. For example: [ChatGPT]
 - “She walked to the store.” [ChatGPT]
 - “The cat jumped from the table to the chair.” [ChatGPT]
 - “He traveled from New York to Los Angeles.” [ChatGPT]
2. **Infinitive marker:** “To” is used before the base form of a verb to form the infinitive. For example: [ChatGPT]
 - “I want to go for a walk.” [ChatGPT]
 - “She loves to sing.” [ChatGPT]
 - “He decided to take a break.” [ChatGPT]
3. **Part of an infinitive phrase:** “To” is also used as part of an infinitive phrase, where it functions as a marker for the infinitive verb. For example: [ChatGPT]
 - “She is eager to learn.” [ChatGPT]
 - “He made an effort to help.” [ChatGPT]
4. **Indicating purpose or intention:** “To” can be used to express the purpose or intention of an action. For example: [ChatGPT]
 - “I went to the grocery store to buy some milk.” [ChatGPT]
 - “He took the umbrella to stay dry.” [ChatGPT]
5. **Indicating a range or limit:** “To” can indicate a range or limit when used with numbers or quantities. For example: [ChatGPT]
 - “The temperature ranges from 20 to 30 degrees Celsius.” [ChatGPT]
 - “He scored 85 to 90 percent in the exam.” [ChatGPT]
6. **Inflection of the verb “to be”:** In some cases, “to” is used as an inflection of the verb “to be” in certain dialects, such as African American Vernacular English (AAVE). For example: [ChatGPT]
 - “She be going to the party.” [ChatGPT]

It’s important to note that the context in which “to” is used can determine its specific meaning and function. [ChatGPT]

The following experiment will show a child the value of properly brushing their teeth.

The child should write into their science journal all of the steps they do in the experiment.

Use four raw eggs, four cups, toothpaste, soda, lemon juice, and four sticky notes.

Label the sticky notes Soda 1, Soda 2, Juice 1, and Juice 2. Place one sticky note on the side of each glass.

Carefully completely cover two of the four eggs with toothpaste.

Pour a dark brown soda (such as cola) into the two cola cups. Pour lemon juice into the two juice cups. Leave enough room to add the eggs.

Very carefully submerge the toothpaste covered eggs into the Soda 1 and Juice 1 cups.

Carefully submerge the uncovered eggs into the Soda 2 and Juice 2 cups.

Discuss with your child. Ask them to write their predictions into their science journal.

Put the cups somewhere safe for about 12 hours.

Remove both of the soda eggs and rinse them in cool water (removing the toothpaste from the toothpaste covered egg). Gently pat them dry with a towel. Place the eggs on their sticky note labels.

Repeat for the juice eggs.

The unprotected egg in the soda will have become discolored.

The unprotected egg in the juice will have a soft shell.

Discuss the results with your child.

Toothpaste protected the egg shell in the soda from becoming discolored and brown.

Toothpaste protected the egg shell in the acidic lemon juice from becoming soft.

total harmonic distortion

5 December 2023: “What is THD?

- What is it?
- Why it happens?
- When it's good and when it's bad?

THD stands for Total Harmonic Distortion, a measure that quantifies the amount of harmonic distortion introduced by a device or system.

Harmonic distortion occurs when a device generates frequencies that are multiples of the original signal, leading to altered waveforms.

Several factors contribute to THD, including non-linearities in electronic components such as amplifiers, transistors, and tubes.

As a result, the output signal contains additional frequency components not present in the input signal.

☑ Example 1. Amplifiers:

When an audio amplifier introduces harmonic distortion, it can affect the clarity and purity of the reproduced sound. High-quality amplifiers aim to minimize THD to preserve the fidelity of the audio signal.

☑ Example 2. Audio Processing:

Some audio processing equipment, like analog equalizers or compressors, may unintentionally introduce harmonic distortion. While some level of distortion can be desirable for certain musical applications, excessive THD can degrade audio quality.

During the mixing or mastering process, engineers can add THD on purpose, to individual sounds or a whole mix, as it might sound pleasant to our ears. Or to achieve some sound designing goal, or to increase mix translation.

☑ Example 3. Speakers:

When the speaker attempts to reproduce a pure tone, the physical limitations will cause the speaker to produce additional frequencies (harmonics) that were not present in the original signal.

More expensive speakers have more expensive materials, and the speakers have

some advantages, being light and strong at the same time. These produce less THD.

Overall, high THD in a speaker results in a less accurate and potentially less enjoyable listening experience.

Understanding and controlling THD is crucial in various applications to maintain signal integrity and ensure the faithful reproduction of audio information.”

—Harriet Tubman

“Harriet Tubman freed an incredible amount of enslaved people, was a woman, a fugitive herself, AND after the fugitive slave law was passed. She went back countless times to free folks, incl almost her entire family but shit really gets weird when she’s a medic for the union. Because not only did she do all that work as an abductor for the Underground Railroad, she cared for and healed countless soldiers and freed folk suffering from terrible wounds and illnesses (that were responsible for 2/3rds of deaths throughout the war). She even gave up her provisions of military rations so she could be in solidarity with the other black folks who had to work to survive. She made pies and root beer at night to make money, while she was healing folks. And teaching folks. And helping to build a laundry house to train freed folks to become laundresses. And did a lot more on top of all that. And this is before talking about her heroism in actual battle.” —[rafael](#)

Repression has reached a terrifying new stage when a court can hand down the death penalty for nothing more than tweets. Saudi authorities should quash the verdict.

On July 10, 2023, the Specialized Criminal Court, convicted Muhammad al-Ghamdi of several criminal offenses related solely to his peaceful expression online. The court sentenced him to death, using his tweets, retweets, and YouTube activity as the evidence against him.

Al-Ghamdi’s brother is a known Saudi scholar and govt critic exiled in the UK. On Aug 24, Saeed wrote on Twitter that the “false ruling aims to spite me personally after failed attempts by the investigations to return me to the country.”

Saudi authorities in recent years have increasingly retaliated against the family members of critics and dissidents abroad in an effort to coerce them to return to the country, Human Rights Watch said.

Court docs cite two X platform accounts as belonging to al-Ghamdi. Human Rights Watch found that the first account had two followers and the second had eight.

Both accounts, which have fewer than 1,000 tweets combined, largely contained

retweets of well-known critics of govt.

The court docs say the court issued the sentence on the grounds that the crimes “targeted the status of the King and the Crown Prince,” & that the “magnitude of his actions is amplified by the fact they occurred through a global media platform, necessitating a strict punishment.” —[Joey Shea](#)

28 July 2023: “Uganda President Museveni to Putin:

“One facet of neo-colonialism and colonialism was Africa being confined to producing only raw materials, crops, like coffee, and minerals. I can give you an example: the global business for coffee is worth \$460 billion. That is the value of the coffee business in the world. But of those \$460 billion the coffee producing countries of the whole world share only \$25 billion and Africa shares only \$2.4 billion out of \$460 billion.

This issue is the biggest stunting factor why the African economies are stunted; they do not grow, because all the value is taken by other people. Germany earns more from coffee than the whole of Africa. Germany earns \$6.85 billion from coffee, while Africa earns only \$2.4 B 2.5 billion. This is the big scandal.

So, what I want to propose to Russia and China is to discourage as a policy the importing of raw materials from Africa, to instead work with the Africans to add value at source. This would within a very short time transform the economies of Africa from low- and mid-income to high- and middle-high income because we see from the example of Uganda that everything is depressed now; production is high but we are still producing raw materials.” ” —[COMBATE](#)

9 February 1990: "This Gorbachev Foundation record of the Soviet leader's meeting with James Baker on February 9, 1990, has been public and available for researchers at the Foundation since as early as 1996, but it was not published in English until 2010 when the Masterpieces of History volume by the present authors came out from Central European University Press. The document focuses on German unification, but also includes candid discussion by Gorbachev of the economic and political problems in the Soviet Union, and Baker's "free advice" ("sometimes the finance minister in me wakes up") on prices, inflation, and even the policy of selling apartments to soak up the rubles cautious Soviet citizens have tucked under their mattresses.

Turning to German unification, Baker assures Gorbachev that "neither the president nor I intend to extract any unilateral advantages from the processes that are taking place," and that the Americans understand the importance for the USSR and Europe of guarantees that "not an inch of NATO's present military jurisdiction will spread in an eastern direction." Baker argues in favor of the Two-Plus-Four talks using the same assurance: "We believe that consultations and discussions within the framework of the 'two+four' mechanism should guarantee that Germany's unification will not lead to NATO's military organization spreading to the east." Gorbachev responds by quoting

Polish President Wojciech Jaruzelski: “that the presence of American and Soviet troops in Europe is an element of stability.”

The key exchange takes place when Baker asks whether Gorbachev would prefer “a united Germany outside of NATO, absolutely independent and without American troops; or a united Germany keeping its connections with NATO, but with the guarantee that NATO’s jurisdiction or troops will not spread east of the present boundary.” Thus, in this conversation, the U.S. secretary of state three times offers assurances that if Germany were allowed to unify in NATO, preserving the U.S. presence in Europe, then NATO would not expand to the east. Interestingly, not once does he use the term GDR or East Germany or even mention the Soviet troops in East Germany. For a skilled negotiator and careful lawyer, it seems very unlikely Baker would not use specific terminology if in fact he was referring only to East Germany.

The Soviet leader responds that “[w]e will think everything over. We intend to discuss all these questions in depth at the leadership level. It goes without saying that a broadening of the NATO zone is not acceptable.” Baker affirms: “We agree with that.” — [National Security Archive](#)

“The background and implications of the 2014 far-right coup in Kiev, which overthrew the pro-Russian President Viktor Yanukovych, is critical for understanding the current Ukraine-Russia war. This coup was openly supported by US and European imperialism and implemented primarily by far-right shock troops such as the Right Sector and the neo-Nazi Svoboda Party.

It represented the temporary culmination of long-standing efforts by US imperialism to install a puppet regime on the borders of Russia and brought the world a major step closer to a war between the largest nuclear powers, the US and Russia. Ukraine has since been systematically built up as a launching pad for a NATO war against Russia.

The regime change prompted the outbreak of an ongoing civil war in the east of Ukraine, between Russian-backed separatists and the US-backed Ukrainian army, that has claimed the lives of tens of thousands and displaced millions.

In the US, the coup was a catalyzer for an ever more aggressive campaign against Russia and a significant shift to the right among layers of the upper middle class. US imperialism and NATO have funded the Ukrainian state and far-right forces with billions of dollars.

The German ruling class seized upon the coup as a pretext for aggressively stepping up its campaign to remilitarize and justify the crimes of fascist forces. For the first time since the end of World War II, representatives of a German government were

Internationally, pseudo-left forces such as the International Socialist Organization (ISO) in the US, the New Anti-capitalist Party of France (NPA), and the Russian Socialist Movement (RSM) supported the coup, falsely proclaiming it a “revolution.” The ICFI and WSWS alone advanced a principled, socialist opposition to this imperialist operation, warning the working class of its dangerous consequences.”

The documents show that multiple national leaders were considering and rejecting Central and Eastern European membership in NATO as of early 1990 and through 1991, that discussions of NATO in the context of German unification negotiations in 1990 were not at all narrowly limited to the status of East German territory, and that subsequent Soviet and Russian complaints about being misled about NATO expansion were founded in written contemporaneous memcons and telcons at the highest levels.”

Think about how much it hurts to have one death in your family. Think about how much it rocks an entire community to lose even one life to violence. Mountains of human bodies are being piled up in violent deaths, all to secure US geostrategic interests in Eurasia. Pure horror.

The empire had multiple opportunities to end this before it started. It had an opportunity to end it in April 2022. It had an opportunity to end it this past November. But it kept shoving it through to advance US interests, and young lives kept being sacrificed to the war god.

Meanwhile US officials openly gloat all the time about how much this war is serving US interests. This should draw white hot rage from everybody.

And then these monsters have the gall to spend weeks anonymously whining to the press that the counteroffensive is failing because Ukrainians are too cowardly to charge through Russian minefields under heavy artillery fire. Absolutely enraging.”

29 August 2023: “Americans are buying up the best fertile lands of Ukraine [larger than all of Italy].

The process of liquidation of the seed fund and the seizure of arable land is led by the notorious multinational company Monsanto . 52% of Ukraine’s land fund has already become its property, as well as the property of Cargill and Dupont. They are controlled by BlackRock, which we wrote about earlier.

In addition to the land, Monsanto coveted the seed fund of Ukraine in order to be able to produce a huge amount of agricultural products on the best land at minimal cost.

Now Alina Levchenko, head of the Supervisory Board of the Center for Certification and Expertise of Seeds and Seed Material, is bringing the enterprise to bankruptcy in order to transfer control to Monsanto. At the same time, Ukraine completely loses any independence in the cultivation of the seed fund.

Having seen what prospects could open up on the example of the scandal with the supply of Ukrainian grain to Europe, Monsanto seeks to gain control over both Ukrainian seed material and arable land.

30 August 2023: “Fresh from a trip to Kyiv, Sen. Richard Blumenthal (D-CT) is arguing that the US is getting its “money’s worth” in Ukraine because Russia is taking losses and no Americans are dying, showing a lack of concern for Ukrainian lives.

“Even Americans who have no particular interest in freedom and independence in democracies worldwide, should be satisfied that we’re getting our money’s worth on our Ukraine investment,” Blumenthal wrote in the *Connecticut Post*.

For less than 3 percent of our nation’s military budget, we’ve enabled Ukraine to degrade Russia’s military strength by half ... All without a single American service woman or man injured or lost,” he added.

The argument has become a common talking point among hawks in Washington who want the US to keep fueling the proxy war against Russia. Sen. Mitt Romney (R-UT) recently called the conflict “the best national defense spending I think we’ve ever done.”

“We’re losing no lives in Ukraine, and the Ukrainians are fighting heroically against Russia,” Romney said. “We’re diminishing and devastating the Russian military for a very small amount of money ... a weakened Russia is a good thing.”

The hawkish senators’ comments came amid Ukraine’s faltering counteroffensive. Despite the lack of success on the battlefield, the Biden administration and most members of Congress want to keep funding the war, which they acknowledge would not continue without US support.

“As Zelensky is frank and forthcoming to say, Ukraine could not have survived without America and our allies,” Blumenthal said. “But his counteroffensive is far from an assured success. In the end, the only way he loses is if America pulls the plug.”

The *Washington Post* recently reported that US intelligence has determined Ukraine’s counteroffensive will fail to meet its main objective of severing Russia’s land bridge to Crimea. Despite the conclusion, the US is pushing Ukrainian commanders to go harder on the battlefield and complaining that Ukraine has become too “casualty averse.”

Leading up to the counteroffensive, the Discord leaks and other media reports showed that the US did not believe Ukraine could regain significant territory. But the Biden administration still pushed for the assault and rejected the idea of a ceasefire.”

30 August 2023: “This war was totally and completely unprovoked by the United States and only a Kremlin agent would suggest otherwise, but also US officials just happen to constantly be boasting about all the ways this war advances US interests as a very low-cost, high-reward investment.” — [Caitlin Johnstone](#)

2 September 2023: “US Officials Keep Boasting About How Much The Ukraine War Serves US Interests

One of the most glaring plot holes in the official mainstream narrative on Ukraine is the way US officials keep openly boasting that this supposedly unprovoked war which the US is only backing out of the goodness of its heart just so happens to serve US interests tremendously.

In a recent article for the Connecticut Post, Senator Richard Blumenthal assured Americans that “we’re getting our money’s worth on our Ukraine investment.”

“For less than 3 percent of our nation’s military budget, we’ve enabled Ukraine to degrade Russia’s military strength by half,” writes Blumenthal. “We’ve united NATO and caused the Chinese to rethink their invasion plans for Taiwan. We’ve helped restore faith and confidence in American leadership — moral and military. All without a single American service woman or man injured or lost, and without any diversion or misappropriation of American aid.”

As Antiwar’s Dave DeCamp recently observed, this type of “investment” talk about Ukraine has been getting more common. Last weekend Senator Mitt Romney called the war “the best national defense spending I think we’ve ever done.”

“We’re losing no lives in Ukraine, and the Ukrainians are fighting heroically against Russia,” Romney said. “We’re diminishing and devastating the Russian military for a very small amount of money ... a weakened Russia is a good thing.”

Last month Senate Minority Leader Mitch McConnell argued that Americans should support the US government’s proxy warfare in Ukraine because “we haven’t lost a single American in this war,” adding that the spending is helping to employ Americans in the military-industrial complex.

“Most of the money that we spend related to Ukraine is actually spent in the US, replenishing weapons, more modern weapons,” McConnell said. “So it’s actually employing people here and improving our own military for what may lie ahead.”

McConnell has been talking about how much this war benefits the US since last year. During a speech back in December the ailing swamp monster argued that “the most basic reasons for continuing to help Ukraine degrade and defeat the Russian invaders are cold, hard, practical American interests.”

“Helping equip our friends in Eastern Europe to win this war is also a direct investment in reducing Vladimir Putin’s future capabilities to menace America, threaten our allies and contest our core interests,” McConnell said.

As we’ve discussed previously, US empire managers have been talking about how much this war serves US interests ever since it began.

In May of last year Congressman Dan Crenshaw said on Twitter that “investing in the destruction of our adversary’s military, without losing a single American troop, strikes me as a good idea.”

“It is in America’s national security interests for Putin’s Russia to be defeated in Ukraine,” tweeted the perpetually war-horny senator Lindsey Graham.

Last November the imperial war machine-funded think tank Center for European Policy Analysis published an article titled “It’s Costing Peanuts for the US to Defeat Russia,” subtitled “The cost-benefit analysis of US support for Ukraine is incontrovertible. It’s producing wins at almost every level.”

“US spending of 5.6% of its defense budget to destroy nearly half of Russia’s conventional military capability seems like an absolutely incredible investment,” gushed the article’s author Timothy Ash. “If we divide out the US defense budget to the threats it faces, Russia would perhaps be of the order of \$100bn-150bn in spend-to-threat. So spending just \$40bn a year, erodes a threat value of \$100-150bn, a two-to-three time return. Actually the return is likely to be multiples of this given that defense spending, and threat are annual recurring events.”

And of course the mass media have been all aboard the same messaging. A few weeks ago The Washington Post’s David Ignatius wrote an article explaining why westerners shouldn’t “feel gloomy” about how things are going in Ukraine, writing the following about how much this war is doing to benefit US interests overseas:

“Meanwhile, for the United States and its NATO allies, these 18 months of war have been a strategic windfall, at relatively low cost (other than for the Ukrainians). The West’s most reckless antagonist has been rocked. NATO has grown much stronger with the additions of Sweden and Finland. Germany has weaned itself from dependence on Russian energy and, in many ways, rediscovered its sense of values. NATO squabbles make headlines, but overall, this has been a triumphal summer for the alliance.”

I suspect I’ll be periodically reminding my readers of that paragraph — and Ignatius’ parenthetical “other than for the Ukrainians” aside — for the remainder of my writing career.

So on one hand the western political/media class have been hammering us in the face with the message that the invasion of Ukraine was “unprovoked” and that the US and its allies played no antagonistic role in paving the road to this conflict whatsoever, and on the other hand you’ve got all these empire managers enthusing about how much this war benefits US interests.

Those two narratives seem a wee bit contradictory, do they not?

A critical thinker can reconcile this contradiction in one of two ways. First, they can believe that the world’s most powerful and destructive government is just a passive, innocent witness to the violence in Ukraine, and is only benefitting immensely from the war as a complete coincidence. Second, they can believe the US intentionally provoked this war with the understanding that it would benefit from it.

From where I’m sitting, it’s not difficult to determine which of these is more likely.” — [Caitlin Johnstone](#)

MEMORANDUM FOR THE SECRETARY OF STATE

SUBJECT: Delegation of Authority Under Section 614(a)(1) and Section 506(a)(1) of the Foreign Assistance Act of 1961

By the authority vested in me as President by the Constitution and the laws of the United States of America, including section 621 of the Foreign Assistance Act of 1961 (FAA), I hereby delegate to the Secretary of State:

(1) the authority under section 614(a)(1) of the FAA to determine whether it is important to the security interests of the United States to furnish approximately \$128 million in assistance to Ukraine without regard to any provision of law within the purview of section 614(a)(1) of the FAA; and

(2) the authority under section 506(a)(1) of the FAA to direct the drawdown of approximately \$128 million in defense articles and services of the Department of Defense, and military education and training, to provide assistance to Ukraine and to make the determinations required under such section to direct such a drawdown.

You are authorized and directed to publish this memorandum in the Federal Register.

JOSEPH R. BIDEN JR

Here is the explanation:

simple terms, this memorandum is a written order from the President of the United States, Joseph R. Biden Jr., to Secretary of State Anthony Blinken. It grants two specific powers to the Secretary of State regarding providing assistance to Ukraine:

1. The first power allows the Secretary of State to decide whether it’s necessary for the security interests of the United States to give approximately \$128 million in assistance to Ukraine. This decision can be made without being restricted by certain laws that might otherwise apply.

2. The second power gives the Secretary of State the authority to access and use approximately \$128 million worth of defense equipment, services, and military training from the Department of Defense to provide assistance to Ukraine. This authority also allows the Secretary of State to make necessary decisions related to this use.

Additionally, the memorandum instructs the Secretary of State to publish this order in the Federal Register, which is a public government record of official actions and

regulations.

In summary, it's a formal document giving the Secretary of State the ability to provide aid to Ukraine and manage related matters, as specified, with certain legal flexibility.” —[Simon Ateba](#)

“The background was that President Putin declared in the autumn of 2021, and actually sent a draft treaty that they wanted NATO to sign, to promise no more NATO enlargement. That is what he sent us. And that was a pre-condition for not invading Ukraine. Of course we didn't sign that. The opposite happened. He wanted us to sign a promise never to enlarge NATO. He wanted us to remove our military infrastructure in all Allies that have joined NATO since 1997, meaning half of NATO, all the Central and Eastern Europe, we should remove NATO from that part of our Alliance, introducing some kind of “B” or second class membership. We rejected that. **So he went to war to prevent NATO, more NATO, close to his borders.** He has got the exact opposite.”

unemployment

Joe Biden brags about his low unemployment numbers. What he doesn't tell you is how he achieved them.

Joe Biden threw more than 10 million Americans off the unemployment rolls in a five day period.

Joe Biden also changed the rules so it became much more difficult to be eligible for unemployment.

The actual number of percentage of Americans who are unemployed is the greatest since the Great Depression.

12 September 2023: “I think the problem that we've had is that people decided they didn't really want to work so much anymore through COVID and that has had a massive issue on productivity. Tradies have definitely pulled back on productivity. They have been paid a lot to do not too much in the last few years and we need to see

that change. **We need to see unemployment rise. Unemployment has to jump 40-50% in my view. We need to see pain in the economy. We need to remind people that they work for the employer, not the other way around.** I mean, there's been a systemic change where employees feel the employer is extremely lucky to have them as to the other way around. So it's a dynamic that has to change. We've got to kill that attitude and that has to come through hurting the economy, which is what the whole global - the world - is trying to do. The governments around the world are trying to increase unemployment to get that to some sort of normality and we're seeing it. I think every employer now is seeing it. I mean there is definitely massive layoffs going off. People might not be talking about it but people are definitely laying people off and we're starting to see less arrogance in the employment market and that has to continue because that will cascade across the costs balance.” —Property developer, CEO and Founder Tim Gurner, Gurner Group, quoted in video tweeted by [Ken Klippenstein](#); video included

Interesting thing happened to me. A few years ago I been playing with SPL Vitalizer (plugin available from Plugin Alliance) and noticed how good is the stereo expander on there.

Then I met a few like really big engineers who also use this device and also for the stereo expander.

Turned out, it has some unique widening circuit.

GET PERFECT VOCALS!

HERE'S HOW TO ACHIEVE THE BEST TAKE:

Record multiple takes and focus on how you pronounce each phrase.

Take 1	Take 2
Take 3	Take 4

Go through each take and pick the best parts and cut the rest from them.

1	2	4	3
3	4	2	1

Now merge all the parts you cut from each take into one perfect take.

1	2	3	4	3	4	2	1
---	---	---	---	---	---	---	---

15 December 2023: “How to get big vocals?
+ Bonus tip for artists
First of all, you shouldn’t neglect clip gain automation. And I’ll explain why.
For vocals to perceive as “big” they should have good dynamic range. No hard compression.
But they should sit in the beat right?
So you reach out to your clip gain automation and make them sit in the beat before compression.
Then, don’t cut the lows, or cut very carefully. These low frequencies directly correlate to how “big” is the sound. Noticed how if you talk closely to the microphone the sound becomes “bassy” and “big”? Not a coincidence. However, you may still will need to cut the low mids a bit to fit vocals in the beat better.
To avoid clashing vocals with bass, sidechain those low frequencies from bass and kick. Even with a mixed beat, you can sidechain vocals from the low frequencies.
Also, compress very gently. Taming peaks first and then aim at +/- 1 db of compression. I even used 0.5 db after good clip gaining, mostly getting the character out of compressor.
Use the most beautiful EQ you have to boost the very high frequencies. These details in highs will also make the vocals to seem bigger.
Don’t forget de essing. Have mercy to your listeners and don’t shoot them with “big” esses.

On auxes, use short reverb (300-500ms), use parallel compression and chorus.
Long reverb can be used as well but that’s not helping, use it just if you need, but not too much of course. With long reverb you also can sidechain it from dry vocals so this reverb is not loud when vocals play, keeping them bigger, but becomes louder

during empty spaces, filling it with a nice tail.

And that's it, your vocals are big now.

ÑÑÑÑÑ-

Bonus tip:

If you are an artist, you can record yourself closer to the microphone (not kissing with it tho) with lower gain. Your vocals initially will be big. And that's the best approach.” —[Nathaniel W.](#)

3 January 2024: “How to keep vocals consistent?

You probably have vocals that sound present through the whole mix but some frequency range jumps out of the mix time to time

Some words sound boomy, or vocalist shouts some of the long notes, making the midrange unpleasant

Great decision will be to use multiband compression and compress only the frequency range that jumps out, keeping the vocals presence and increase consistency” —[Nathaniel W.](#)

VOCAL TIP

If your vocal is lacking body or power, try adding an additional vocal layer an octave down. To do this, simply duplicate your vocal, then pitch it down 12 semitones. You can then lower the volume and EQ the vocal so that it gels together with your existing vocal.

26 May 2023: “there’s so many different vocal chains that work. De-essing before and after compressing. why would you want to limit the vocals before compressing them? It’s a tedious job but it saves a lot of time of work later when it comes to de-essing eq-ing and stuff.

cut all the “not singing” parts out, saves time when u start to compress vocals and all of that weird sound comes out between pauses of the singer,

U don’t even need a gate at that point, AND the vocal will feel better to work on.”

VOCAL EQ DOS & DON'TS

DOS

- ✓ Roll off your low end more gradually, to preserve the natural elements.
- ✓ Smaller and wider dips in the low-mid and high-mid range will control boxiness and harshness, while maintaining a vocal's true tone.
- ✓ A Subtle boost in the high-end will suffice. If not, try more later after you compress.

DON'TS

- ✗ Steeply cutting out all the low end. That will make your vocal sound thin.
- ✗ Taking surgical EQ cut too seriously. This can make your vocal sound unnatural.
- ✗ Boosting high-end at once. You can always add more later (if needed).

16 January 2024: “Smooth high end on vocals for free

Most very pleasing sounding analog equalizers (and their plugin alternatives) have a high shelf curve that doesn't look like standard shelf that you normally use

However, you can make a shelf like this in any equalizer by changing the Q factor

Try making this shelf, then start from highest frequencies, boost a fair amount, and then move lower until you catch the right sound for you

This will work not only on vocals, but on any source where you want to boost high frequencies smoothly

It will sound much less harsh” — [Nathaniel W.](#)

29 December 2023: “Pro vocal mixing tip

You can experiment with parallel saturation.

Make a pretty aggressive saturation on the aux channel, and blend it slightly with original signal.

Can help your vocals to stand out yet not sounding too loud” — [Nathaniel W.](#)

2 January 2024: “Pro vocal mixing tip

Technique that I developed for one of the songs I mixed

1. Create two ping pong delays, 1/4 note
2. Make your first delay exactly two repeats, and narrow the width to like 50%
3. Then send it to another aux channel with another ping pong delay, that is using the same settings
4. On this second channel, use full width, and cut slightly more lows and highs

As a result, you will create more complicated delay that not only jumps between L and R channels, but also moves further from center after 2 repeats

This will add interesting movement to your mix” — [Nathaniel W.](#)

10 January 2024: “Pro vocal mixing tip

You can try using different reverbs for L and R channels, with same time characteristics

That way, your reverb will less sum to the middle and going to sound more wide and spacial, without using stereo wideners that damage the phase

I wouldn't say it's “better” or “worse”. It's a technique that you might want to use, and might not.

In most cases you probably will be good just using the reverb as usual.

Sometimes gentle widening won't hurt your reverb, but if you hear that you want it much more spacial, better to use this trick rather than push the widener more and more” — [Nathaniel W.](#)

15 January 2024: “Improve your vocal mixing skills

This is the technique I developed and applied for many songs and it helped me a lot, especially when I had less experience

This will help you to learn vocal mixing faster. Here is the thing:

After you did all the vocal mixing and added all your fancy plugins and reverbs and everything

Just go back to your vocal chain, and turn off EQ

Just turn it off

In many, many cases you'll notice that your vocals started to sound better at something. Fuller, richer, more natural.

Now keeping all the other processing turned on, do EQing again, applying ONLY what's really necessary and fixing what makes your mix worse

You can do it on any finished mix.

Just try it.

You can A/B with your previous settings and if you are not a professional engineer,

I can guarantee you will choose newer settings

You would be surprised how simple are equalizations we do. And this technique allows you to learn that.

With more experience, you will start EQing like that right away” —[Nathaniel W.](#)

17 January 2024: “Why your vocals don’t sit in the beat?

A few reasons why it can happen.

1. Instrumental is oversaturated spectrally. Too much information in the mids. Use gentle EQ.

2. You didn’t specifically paid attention how vocals interact with bass and drums: particularly kick, snare, hats. Tips will be in the end*

3. Your vocals are not cleaned well. Some mouth clicks, mic pops, sibilants jump out.

4. Your vocals are too dynamic and you can’t fit them using a compressor. Do the clip gain automation.

5. The space you built doesn’t fit the instrumental.

6. You didn’t pay attention how instruments interact with vocals.

7. The beat is heavily limited. Ask the producer for a version with headroom. If he won’t provide it, don’t worry. Just change the producer.

Bonus tip: Don’t try to pan instruments away from conflicting with vocals. Use EQ. Remember, your mix shouldn’t sound messy in mono. That way, it’ll sound much better in stereo. Just compare if you doubt.

*Kick and bass should cut through vocals. Snare should either cut through or let the vocals sound on top smoothly. Hats shouldn’t blend too much with vocals high end.” —[nathaniel W.](#)

“In great empires the people who live in the capital, and in the provinces remote from the scene of the action, feel, many of them scarce any inconveniency from the war; but enjoy, at their ease, the amusement of reading in the newspapers the exploits of their own fleets and armies. They are commonly dissatisfied with the return to peace, which puts an end to their amusement, and to a thousand visionary hopes of conquest and national glory, from a longer continuance of the war.” —Adam Smith, *Wealth of Nations* 1776

I counted the wars listed in the Wikipedia list of US wars. Then I looked at a map showing the conflicts the US is currently involved in. And then looked up if there was a listing for a war in that country. I totalled the number of wars the US is actually involved in.

I then looked up the number of combat operations and Special Forces missions the DoD lists.

I then compared the US wars to the list of genocides on Genocide Watch.

I then Looked up the information on the CIA’s torture program, starting with the report by the Senate select committee on intelligence and then from other sources.

Joe Biden’s total is 23 wars (by my count, six by the official count), 65 combat operations, SOF missions in 134 countries, 2 genocides (he reached a high of three genocides), and 50 torture operations in 28 states.

The nations with the next biggest number of wars (using the Wikipedia lists):

Biden’s 23 wars are in: Afghanistan (Biden replaced almost all fo the regular duty military with CIA operatives and provate contracted mercenaries), Cameroon, Central African Republic, Eritrea, Ethiopia, Haiti, Iraq, Kenya, Libya, Mali, Mauritania, Nagorno-Karabakh Autonomous Region, Niger, Pakistan, Philippines, Saudi Arabia, Somalia, South China Sea, Syria, Tunisia, Ukraine, and Yemen

Before you coaim that the US is not at war in Ukraine consider this information from the Biden administration: US four star General Jack Keane said, “For just \$66-billion we bought ourselves a war with Russia where Americans are not dying, but Ukrainians. That’s an excellent deal.” In the summer of 2022, Joe Biden said that the US had covert forces in Ukraine. The US already had combat units in Ukraine prior to 24 February 2022. Those troops were temporarily withdrawn, but replacements returned with the claimed role of training Ukrainians on US weapons and selecting targets for the Ukrainian military.

4: Russia’s wars: Central African Republic, Mali, Syria, Ukraine

3: Pakistan (Alvi), Nigeria (Buhari), Chad (Déby), Philippines (Marcos), India (Murmu), Russia (Putin)

2: Niger (Bazoum), Mali (Goila), UK (Sunak/Charles III), Ethiopia (Zewde)

Go ahead and tell me that Putin is the world's worst warmonger and that Biden is squeaky clean. Or that Donald Trump before him was somehow anti-war.

For those parroting Biden's claim that Russia started the current war in Ukraine, consider the truth about previous US lies:

Iraq War: There were no WMDs in Iraq

Spanish-American War: Spain didn't sink the Maine.

World War I: The Lusitania was illegally filled with weapons and ammo.

Vietnam War: The Gulf of Tonkin incident was faked.

Syrian War: There was no chemical attack in Syria.

World War II: FDR provoked the war by cutting off Japan's oil shipments and the Japanese delivered an official declaration of war hours before the supposed surprise attacks.

Mexican-American War: Mexicans did not kill Americans on US soil

Revolutionary War: Thomas Jefferson lied when he called Native Americans "savages."

US imperialism since 9/11 has killed at least 12 million people, 85%-90% were civilians.

US imperialism since the end of World War II (1945) has killed between 20 and 30 million people.

The number of American military killed in US wars since 1945 are 250,000.

The population of the **Soviet Union** in 1939 was 189 million. The estimated number of World War II deaths was 27 million, 7 million of whom were civilians, or about 14.3% of the population,

The population of the **United States** in 1939 was 139 million. The estimated number of World War II deaths was 292,000, 6,000 of which were civilians, or about 0.21% of the population.

I oppose all wars. I was a conscientious objector in the Vietnam War. I am not in any way supporting Putin or his wars. I am telling you that the big problem is US imperialism. The problem is the massive campaign donations the Democratic and Republican parties (both of them, not just one or the other) take from the military industrial complex.

18 July 2023 CRITIC: “Third party candidates like RFKJr, Cornel West, possibly Joe Manchin, are the biggest threat to our survival as a free people who govern ourselves” —Laurence Tribe

Mussolini, the inventor of fascism, defined it as a merger of state and corporate power. On 7 February 1972, President Richard Nixon signed the Federal Election Campaign Act (FECA) of 1971 into law, legalizing corporate campaign donations. The Democratic, Libertarian, and Republican Parties take corporate campaign donations that greatly sway their policies, literal fascism. The Green Party refuses to accept any corporate campaign donations.

26 July 2023: “The Democrats are in a bad spot. They are going to replace Biden - either at the convention or soon before. This will open up a huge lane for Cornel West and his 3rd Party run. I'll explain.” —[Professor Anthony Zenkus](#)

The replacement won't be Kamala. Her approval numbers are dismal and she's definitely not serious enough to be president. Newsom is a top contender- and is currently salivating on the sidelines. Whitmer is also a contender. A Newsom-Whitmer ticket might be attractive to them but if they sideline Kamala, a woman of color and the first woman VP, for an all-white ticket with a white man at the top, this will not play well. They cannot afford a subdued black voter turnout. Or lower numbers w/women. This is going to be a close election and they know it.

So it doesn't look good for them. If they foist a donor-approved pick on us around convention time, people won't be happy. Of course the loyalist base will be all-in lockstep, but that's not most Democrats. And it won't play well with independents.

The main problem with this is they can't do it too soon because Democrats definitely do NOT want vigorous primaries and debates on policy. At all. Esp on Ukraine. So it has to be post-primary time and before convention. Which means they will be choosing the nominee in a back room.

The Dem loyalists will fall in line, but it won't be enough. Most Dem voters don't even want Biden to run again. So the scenario will likely be: Biden is out as nominee, a woman of color has been passed over for the nomination, and many voters feel alienated.

The other option is they begrudgingly do it before primaries are over, which means they will have to agree to one or two debates tops. And just push Newsom or whoever as hard as they can. Remember they have the msm locked up so whoever they like will be given the royal treatment.

The only advantage to this approach is that Kamala would lose fair and square and they would hope the base won't feel slighted. But it's risky. The heat will have to be turned up on RFK Jr so his anti-Ukraine war position isn't taken seriously.

Expect some currently unknown scandal about him to break at that point. Again, they don't want fair primaries and open debates on policy, but they also don't want a depressed black voter turnout - which was a significant factor in Hillary's loss in key states in 2016.

So it's a mess. And what does this have to do with Cornel West? Everything. His entire candidacy is built on the critique that neither party serves us and neither party cares what we think. Any of these scenarios feeds into this.

He is also a strong, consistent activist author and speaker against racism. All he'd have to do is say “Look how they treated our dear sister Kamala” and the party would be in serious trouble. He doesn't support Kamala Harris on policy, but he'd be right to say it.

And it could likely resonate with enough voters to make the difference in what will be a close election. Despite the course Dems choose it will give enough voters enough pause to consider Cornel West as an option. Dems are terrified of this.

The bottom line is - there are no good options for them unless they throw in the towel for 2024 and focus on midterms and 2028. That's always an option. But if Trump is the nominee and he wins, they fear he won't go along with whatever war plans they have in place.

So it's a mess. They don't have great options. Mitch McConnell just had something resembling a mini-stroke on live TV - the age factor doesn't play well for Biden.

If Cornel West can hone his message and be more disciplined in major interviews, he can use this moment to gain serious momentum. He needs a strong campaign manager and messaging people who can boil his message down to a simple message that will resonate:

"These parties don't care about you and aren't serving you. We need to move forward outside the two-party system and now is the time".

The final option is they do what they can to push Biden across the finish line, pray he wins, then convince him to step down after the election. That would mean a 4 year Kamala presidency and it is quite the gamble. Again, they don't have good options here.

And Biden is in serious decline. There's serious risk he won't be able to continue till November 2024. As @peterdaou points out, top Democrats are saying Biden is much more frail in person than he appears on camera. There's a reason he skips state dinners when he travels.

So... if there was ever an opening for a true working-class aligned 3rd Party candidate, now is the time. Cornel West needs to see his candidacy as not symbolic. He needs to be in it to win. That means choosing a team of serious outsiders who are on the same page.

All this talk of political machinations makes me sick. I hate the horse race. I and many Americans know we have been abandoned by this system and the two parties which prop it up. But I have hope.

I believe the people are waking up. I believe the corrupt system cannot last. I feel it deep inside. History never changes overnight, so whatever happens with Dr. West's candidacy, it will be a major role in moving us toward a people-centered, worker-centered society where we put people over profits, care for our planet and ensure a future where all people, here in the US and globally, can flourish. We have to because any other option is untenable.

[Biden's] approvals hover between 39 and 41%. Most voters don't want him to run, including most Dems. His health- cognitive and physical- is in serious decline. Dem insiders are saying off the record that he is in bad shape. He can't campaign.

The point is Democrats use marginalized groups to get elected and then toss them aside when they're no longer of use. It's the virtue-signaling of identity politics. Maybe he wouldn't say it, but people would and it would be true." —Professor Anthony Zenkus

Willow project

President Joe Biden approved the Willow project on 13 March 2023.

The Willow project is an oil drilling project by ConocoPhillips located on the plain of the North Slope of Alaska in the National Petroleum Reserve in Alaska. The project was originally to construct and operate up to five drill pads for a total of 250 oil wells. Associated infrastructure includes access and infield roads, airstrips, pipelines, a gravel mine and a temporary island to facilitate module delivery via sealift barges on permafrost and between waters managed by the state of Alaska.

Environmentalist organization Earthjustice filed a lawsuit on 14 March 2023, on behalf of conservation groups to stop the Willow project, saying that the approval of a new carbon pollution source contradicts President Joe Biden's promises to slash greenhouse gas emissions in half by 2030 and transition the United States to clean energy.

The project could produce up to 600 million barrels of oil and 287 million tons of carbon emissions plus other greenhouse gases over 30 years, and could adversely impact Arctic wildlife and Native American communities. The Willow project would damage the complex local tundra ecosystem and, according to an older government estimate, release the same amount of greenhouse gases annually as half a million homes.

9 November 2023: "BREAKING: A federal court in Alaska has issued a ruling allowing the massive Willow oil project to proceed in Alaska's Western Arctic Reserve. We aren't giving up the fight: Our climate can't afford it. Our clients are considering an appeal as we keep working to stop Willow."

"While today's ruling is disappointing, we are entirely confident in our claims, and plan to appeal to the higher court," said Erik Grafe, Deputy Managing Attorney in Earthjustice's Alaska regional office." — [Earthjustice](#)

It happens because our brains tends to adapt to frequency response and tries to smooth it out

If you quickly switch between different frequency responses, your brain will apply “the EQ” from previous monitoring to the current one, distorting it even further from being balanced.

When I need to switch monitoring I love to give my ears a short break. Go drink some tea or coffee, open X, just restart my ears.

Then I start listening, and firstly it can sound a bit different from what it should be. Might need a few minutes to adapt to new frequency response, you also can play references in that moment.

Then I continue the job.” —[Nathaniel W.](#)

XPL - Stanford, 1967-69. Small dialect of PL/I used for compiler writing. One-dimensional arrays. I/O achieved with character pseudo-variable INPUT and OUTPUT, e.g. OUTPUT = 'This is a line'; Inline machine code. “Programmers are given all the rope they ask for. Novices tend to hang themselves fairly frequently.” Implemented on IBM 360, Univac 1100, ICL System 4, CDC6000 and Cyber series, XDS Sigma-5 and Sigma-7, and DEC PDP- 10. “A Compiler Generator,” W.M. McKeeman et al, P-H 1970. Also JCC, AFIPS 1968.

year

“A year is the orbital period of a planetary body, for example, the Earth, moving in its orbit around the Sun. Due to the Earth’s axial tilt, the course of a year sees the passing of the seasons, marked by change in weather, the hours of daylight, and, consequently, vegetation and soil fertility. In temperate and subpolar regions around the planet, four seasons are generally recognized: spring, summer, autumn and winter. In tropical and subtropical regions, several geographical sectors do not present defined seasons; but in the seasonal tropics, the annual wet and dry seasons are recognized and tracked.” —[Wikipedia](#)

Yemen

16 December 2023: “BREAKING

Israeli defense minister:

“We are ready to act against the Houthis, but we are giving the world a chance first”

The Houthis announced today that they will move on to the next phase of “sinking every ship heading to Israel” if the genocide in Gaza is not stopped.” —[Megatron](#)

31 December 2023: “Multiple Reports that the US and UK are preparing to declare total war on the Houthis and Yemen

An Joint-Statement is reportedly expected to be made in the coming hours by the US, Britain and probably Germany, announcing that they are in Final Preparations for a Large-Scale Military Operation against the Houthis in Yemen.

The attack will include the launch of Hundreds of Missiles and Airstrikes against Pre-Planned Targets in Western Yemen and the Red Sea.

Senior Houthi officials are in Tehran at the moment.” —[Megatron](#)

11 January 2024: “That the US backs Israel is discussed all the time obviously but Israel is not reduced entirely to this pawn-like relationship inferred in the spooky “Iran backed” pejorative, for example the New York Times has never used the term “US-backed Israel”

[cited tweet was a follow-up to:] It’s always “Iran-backed Houthis” but never “US-backed Israel” because it’s important to maintain the vague impression the US is a neutral human rights organization that just happens to sell 2000 lbs bombs” —[Adam Johnson](#)

11 January 2024: “Biden on Strikes Against Yemen’s Houthis tonight:

“These strikes are in direct response to unprecedented Houthi attacks against international maritime vessels in the Red Sea—including the use of anti-ship ballistic missiles for the first time in history.

These attacks have endangered U.S. personnel, civilian mariners, and our partners,

jeopardized trade, and threatened freedom of navigation.

More than 50 nations have been affected in 27 attacks on international commercial shipping.

Crews from more than 20 countries have been threatened or taken hostage in acts of piracy.

I will not hesitate to direct further measures to protect our people and the free flow of international commerce as necessary.” —[Megatron](#)

Note that Biden is surrounded by the flags of the two nations that he is conducting the bombing of one of the poorest nations on behalf of.

12 January 2024: “In 2010, Israel illegally intercepted 6 ships in international waters that were bringing humanitarian aid to Gaza. They boarded 3 ships and shot and killed 9 civilians.

Houthis try to blockade Israel for committing an actual genocide, no one is killed, and we bomb Yemen.” —[Prof Anthony Zenkus](#)

12 January 2024: “Biden just starts fucking bombing people and doesn’t even address the nation. Just goes around eating ice cream and shit. I fucking hate it here.” —[Jason Overstreet](#)

13 January 2024: “Biden to Iran:
“The US is preparing for war with Yemen”

Reuters wrote today that the President of the United States sent a special message to Iran about the attacks of the Houthis and assured Iran that the United States is fully prepared for war with Yemen.

Today, the US carried out airstrikes on Yemen and the airport in Sana’a for the 3rd time. Damage was minimal because the Houthis had already evacuated and hidden all military equipment and army. And yesterday they again attacked ships connected to

Israel without a problem.

Biden quickly learned the lesson that an airstrike against Yemen accomplishes absolutely nothing, it is total nonsense, and all it has accomplished is to completely close the Suez Canal to commercial shipping.

British Defense Minister also sent an empty threats to Iran: Our patience is running out.

The *Telegraph* wrote that British aircraft carriers would not join the war because of a “crisis among military personnel”, probably because the British did not want to go to war in the name of genocidal Israel.

The Houthi forces today released videos of large-scale exercises that prepared them for a war against the United States and Israel.

Major General Mohammad Nasser al-Atafi announced:

“Yemen is ready to deter and respond, and we have the advantage in the Red Sea and Gulf of Aden. As long as the war against our brothers in Gaza continues, we will have many surprises.”

British Independent wrote that all Gulf countries allowed Britain and America to use their airspace to attack Yemen, except the Sultanate of Oman.

This means that Qatar, the UAE and Saudi Arabia are officially joining the US coalition in the war with Yemen. Aramco will probably be targeted, and US and UK due to the jump in the price of oil, will bring Europe even more into a big financial crisis.” —[Megatron](#)

15 January 2024: “What did the US and UK achieve by attacking Yemen?

They created the new Nord Stream blow-up situation and made a new economic blow for #Europe.

In an attempt to protect #Israel while it carries out its genocide, they turned the #RedSea into a war zone, stopped all shipping here, created huge economic losses for Europe, whose ships had been passing through without a problem until now.

As a reminder, the #Houthis #Yemen did not allow ships to sail only to Israel, until the genocide in #Gaza was stopped. The #US refused that and attacked the Houthis. Europe turned out to be the stupid donkey that everyone rides.

And not only that, #Biden also managed to show how weakened the United States is now and how it is no longer able to handle even a far less armed army.” —[War reports](#)

18 January 2024: President Joe Biden was asked “Are the air strikes in Yemen working?”

“Well, when you say ‘working’, are they stopping the Houthis, ‘no’, are they going to continue, ‘yes’.” —Joe Biden in video tweeted by [Ryan grim](#); includes video

Biden wasn’t lying. On Thursday, the U.S. led another round of airstrikes in Yemen. “U.S. Central Command forces conducted strikes on two Houthi anti-ship missiles that were aimed into the Southern red Sea and were prepared to launch,” CENTCOM posted on X.

Doubling down on things that haven’t worked, the Biden administration also

announced new sanctions on the Houthis, the de facto government in Yemen, along with a new “specially designated global terrorist” label, which makes it difficult for the Houthis to engage in global transactions.

Zambia

“Bantu-speaking groups mainly from the Luba and Lunda Kingdoms in the Congo River Basin and from the Great Lakes region in East Africa settled in what is now Zambia beginning around 300 CE, displacing and mixing with previous population groups in the region. The Mutapa Empire developed after the fall of Great Zimbabwe to the south in the 14th century and ruled the region, including large parts of Zambia, from the 14th to 17th century. The empire collapsed as a result of the growing slave trade and Portuguese incursions in the 16th and 17th centuries. The region was further

influenced by migrants from the Zulu Kingdom to the south and the Luba and Lunda Kingdoms to the north after invading colonial and African powers displaced local residents into the area around the Zambezi River, in what is now Zambia. In the 1880s, British companies began securing mineral and other economic concessions from various local leaders. The companies eventually claimed control of the region and incorporated it as the protectorate of Northern Rhodesia in 1911. The UK Government took over administrative control from the British South Africa Company in 1924. During the 1920s and 1930s, advances in mining spurred British economic ventures and colonial settlement.

Northern Rhodesia's name was changed to Zambia upon independence from the UK in 1964 under independence leader and first President Kenneth KAUNDA. In the 1980s and 1990s, declining copper prices, economic mismanagement, and a prolonged drought hurt the economy. Elections in 1991 brought an end to one-party rule and propelled the Movement for Multiparty Democracy (MMD) into power. The subsequent vote in 1996, however, saw increasing harassment of opposition parties and abuse of state media and other resources. The election in 2001 was marked by administrative problems, with three parties filing a legal petition challenging the election of ruling party candidate Levy MWANAWASA. MWANAWASA was reelected in 2006 in an election that was deemed free and fair. Upon his death in August 2008, he was succeeded by his vice president, Rupiah BANDA, who won a special presidential byelection later that year. The MMD and BANDA lost to the Patriotic Front (PF) and Michael SATA in the 2011 general elections. SATA, however, presided over a period of haphazard economic management and attempted to silence opposition to PF policies. SATA died in October 2014 and was succeeded by his vice president, Guy SCOTT, who served as interim president until January 2015, when Edgar LUNGU won the presidential byelection and completed SATA's term. LUNGU then won a full term in August 2016 presidential elections. Hakainde HICHILEMA was elected president in August 2021.” —[CIA World Factbook](#)

Zimbabwe

26 August 2023: “Rising political tensions in the [Zimbabwe] have spawned fears of post-election violence among residents in the capital Harare, as ballot tabulation continues a day after voting ended.

Zimbabwe held general elections on Wednesday and Thursday, pitting President Emmerson Mnangagwa against Nelson Chamisa of the Citizens Coalition for Change, the main opposition party.” —[Aljazeera](#)

27 August 2023: “Zimbabwe’s President Emmerson Mnangagwa has won a second and final term in office in an outcome rejected by the opposition and questioned by observers.

Mnangagwa, who took over from longtime leader Robert Mugabe after a 2017 army coup, was widely expected to secure re-election despite the country’s continuing economic crisis, with analysts saying the contest was heavily skewed in favour of the ZANU-PF party, which has ruled the country since independence and the end of white minority rule in 1980.

Mnangagwa won 52.6 percent of the vote compared with 44 percent for Nelson Chamisa, his main challenger, according to official results announced by the Zimbabwe Electoral Commission (ZEC) late on Saturday.” —[Aljazeera](#)

“The hunter-gatherer San people first inhabited the area that eventually became Zimbabwe. Farming communities migrated to the area around 500CE during the Bantu expansion, and Shona-speaking societies began to develop in the Limpopo valley and Zimbabwean highlands around the 9th century. These societies traded with Arab merchants on the Indian Ocean coast and organized under the Kingdom of Mapungubwe in the 11th century. A series of powerful trade-oriented Shona states succeeded Mapungubwe, including the Kingdom of Zimbabwe (ca. 1220-1450), Kingdom of Mutapa (ca. 1450-1760), and the Rozwi Empire. The Rozwi Empire expelled Portuguese colonists from the Zimbabwean plateau but was eventually conquered in 1838 by the Ndebele clan of Zulu general MZILIKAZI during the era of conflict and population displacement known as the Mfecane. In the 1880s, colonists arrived with the British South Africa Company (BSAC) and obtained a written concession for mining rights from Ndebele King LOBENGULA. The king later disavowed the concession and accused the BSAC agents of deceit. The BSAC annexed Mashonaland and subsequently conquered Matabeleland by force during the First Matabele War of 1893-1894 to establish company rule over the territory. BSAC holdings south of the Zambezi River were annexed by the UK in 1923 and became the British colony of Southern Rhodesia. The 1930 Land Apportionment Act restricted Black land ownership and established structural racial inequalities that would favor the White minority for decades. A new constitution in 1961 further cemented White minority rule.

In 1965, the government under White Prime Minister Ian SMITH unilaterally declared its independence from the UK. London did not recognize Rhodesia’s independence and demanded more voting rights for the Black majority in the country. International diplomacy and a liberation struggle by Black Zimbabweans led to biracial elections in 1979 and independence (as Zimbabwe) in 1980. Robert MUGABE, who led the uprising and became the nation’s first prime minister, was the country’s only ruler (as president since 1987) from independence until November 2017, when loss of support from his political party and the country’s military forced his resignation. In the mid-1980s, the government tortured and killed thousands of civilians in a crackdown on dissent known as the Gukurahundi campaign. Economic mismanagement and chaotic implementation of land redistribution policies following

independence periodically crippled the economy and resulted in widespread shortages of basic commodities. General elections in 2002, 2008, and 2013 were severely flawed and widely condemned but allowed MUGABE to remain president. In November 2017, Vice President Emmerson MNANGAGWA became president following a military intervention led by Constantino CHIWENGA that forced MUGABE to resign, and MNANGAGWA cemented power by sidelining rivals Grace MUGABE (Robert MUGABE's wife) and her faction of the ruling Zimbabwe African National Union-Patriotic Front party. In July 2018, MNANGAGWA won the presidential election after a close contest with opposition candidate Nelson CHAMISA. MNANGAGWA has maintained the government's longstanding practice of violently disrupting protests and opposition rallies and politicizing institutions. Economic conditions remain dire under MNANGAGWA.” —[CIA World Factbook](#)

zip gun

noun “A noncommercially produced weapon capable of firing a projectile by force of an explosion or other form of combustion (Penal Code Section 17360)” [from Basic Course Workbook Series, Student Materials, Learning Domain 40, Weapons Violations, Version 6.7, California Commission on Peace Officer Standards and Training]

Zong massacre

On 29 November 1781, the slavers on the ship the *Zong* threw 54 women and children slaves through cabin windows into the sea. On 1 December, 42 male slaves were thrown overboard and 36 more over the next few days, for a total of 142 people killed.

The ship had made a navigational mistake and was low on water. If the slaves died of dehydration the ship captain couldn't collect insurance. Under the law of “general average”, if a captain jettisons part of his cargo to save the rest, he can collect insurance on the loss.

‘

Zuse - (named for Konrad Zuse, the designer of the first modern programming language [Plankalkul](#).) Christian Collberg <collberg@dna.lth.se>, PhD thesis 1991. A descendant of [Ada](#), Modula-2, Mesa and Oberon-1 supporting several levels of information hiding. The Zuse type system includes fully hidden types (similar to Modula-2 opaque types but without any implementation restriction), semi-open pointer types (same as Modula-2 opaque types), extensible record types (similar to Oberon-1 public projection types but without the compiler hint), enumeration types, extensible enumeration types, and extensible subrange types. A type can also be protected by specifying the operations that particular modules may perform (similar to C++ friend classes and [Ada](#) private types). Zuse also includes hidden and extensible constants and hidden inline procedures. In order to support the higher levels of information hiding the implementation employs partial intermediate code linking. Version for Sun-3.

2023 bank crisis

In March 2023 three U.S. banks failed.

Silvergate Bank failed on 8 March 2023.

Silivcon Valley Bank (SVB) was placed into receivership on 10 March 2023.

Signature Bank was closed on 12 March 2023.

During this banking crisis, several members of Congress used their political influence and inside knowledge to engage in trading on banks.

Representative Jared Moskowitz sold shares of Seacoast Banking Corporation worth \$65,000 to \$150,000 on March 10th. \$SBCF fell 20% afterwards. — source: [unusual_whales](#)

Representative Dan Goldman, a Democrat, sold shares of First Republic Bank, \$FRC, on March 15. Dan Goldman has been making hundreds of stock trades since he started his congressional duty. — source: [unusual_whales](#)

Representative John Curtis, Republican, sold shares in First Republic, \$FRC, on March 16, the day the "bailout" occurred. — source: [unusual_whales](#)

Representative Nicole Malliotakis, a Republican from New York, bought shares of New York Community Bancorp, \$NYCB, after private discussions with NY bank regulators and labeled it as her spouse despite single. The stock rallied 40% two days

later after buying Signature assets. — source: [unusual_whales](#)

Many members said it was their trust or advisors, not them trading, to the *New York Times*. Yet once again during crisis, Congressional portfolios benefited while the public panicked. — source: [unusual_whales](#)

4 Children for Sale

from 1948: “The story behind the infamous “4 Children for Sale” photograph in 1948 is heartbreaking.

Lucille Chalifoux, the mother in the photo, was facing eviction from her apartment and, with no other options, made the difficult decision to sell her four children.

The photo captured the attention of the public when it was published in the local newspaper.

Offers of support and job opportunities poured in, but unfortunately, they were not enough to save the children from their challenging fate.

The youngest child, David, was adopted by Harry and Luella McDaniel, who provided him with a stable and safe home.

While his upbringing was strict, he eventually found stability and served in the military for 20 years before working as a truck driver.

However, the older siblings, RaeAnn and Milton, had a much more harrowing experience. They were sold to a couple named John and Ruth Zoeteman, who treated them as property rather than children.

They were chained up in a barn and subjected to physical and emotional abuse. RaeAnn, in particular, had a traumatic upbringing, including an incident of kidnapping, rape, and pregnancy in her teenage years.

Despite their hardships, both RaeAnn and Milton were able to reconnect as adults. Unfortunately, their sister Lana passed away before they could reunite.

Another sibling, Sue Ellen, was in the late stages of lung disease at the time of the reunion but could express her love for her siblings through written communication.

Sue Ellen’s words for the birth mother that sold them: “She needs to be in hell burning.”” —[Fascinating](#)

According to the American Academy of Pediatrics, “Children’s ability to call 911 can save lives.”

EOT — End of Transmission

ASCII: 04 hex

UNICODE: END OF TRANSMISSION

EOT

SEL — Select

SEL — Select

EBCDIC: 04 hex

Device control character taking a single-byte parameter

ENQ

enquíry

ENQ — Enquiry

ASCII: 05 hex (originally [1963] called WRU)

UNICODE: ENQUIRY

ACK

acknowledge

ACK — Acknowledge

ASCII: 06 hex (originally [1963] called RU)

UNICODE: ACKNOWLEDGE

RNL

require new line

RNL — Require New Line

EBCDIC: 06 hex

Line-break resetting indent Tab mode

BEL

bell

BEL — BELL

ASCII: 07 hex (originally [1963] called BELL)

UNICODE: BELL

Control-G

BS

backspace

BS — Backspace

ASCII: 08 hex (originally [1963] called FE0)

EBCDIC: 16 hex

UNICODE: BACKSPACE

GE

graphic escape

GE — Graphic Escape

EBCDIC: 08 hex

Non-locking shift that changes the interpretation of the following character

HT

horizontal tabulation

HT — Horizontal Tabulation

ASCII: 09 hex (originally [1963] called either HT or SK)

EBCDIC: 05 hex

UNICODE: CHARACTER TABULATION

Also known as tab.

SPS

superscript

SPS — Superscript

EBCDIC: 09 hex

Begin superscript or undo subscript.

LF

line feed

LF — Line Feed

ASCII: 0A hex (originally [1963] called VTAB)

UNICODE: LINE FEED

Also known as new line (NL)

Also known as end of line (EOL)

RPT

repeat

RPT — Repeat

EBCDIC: 0A hex

Switch to an operation mode repeating a print buffer.

VT

vertical tabulation

VT — Vertical Tabulation

ASCII: 0B hex

EBCDIC: 0B hex

UNICODE: LINE TABULATION

FF

form feed

FF — Form Feed

ASCII: 0C hex

EBCDIC: 0C hex

UNICODE: FORM FEED

SO
shift out

SO — Shift Out

ASCII: 0E hex

EBCDIC: 0E hex

UNICODE: SHIFT OUT

Also knw as LOCKING-SHIFT ONE

SI
shift in

SI — Shift In

ASCII: 0F hex

EBCDIC: 0F hex

UNICODE: SHIFT IN

Also known as LOCKING-SHIFT ZERO

DLE

data link escape

DLE — Data Link Escape

ASCII: 10 hex (originally [1963] called DC0)

EBCDIC: 10 hex

UNICODE: DATA LINK ESCAPE

DC1

device control 1

DC1 — Device Control 1

ASCII: 11 hex

EBCDIC: 11 hex

UNICODE: DEVICE CONTROL ONE

Also known as XON (transmit on); used to start paper tape reader

Control-Q

DC2

device control 2

DC2 — Device Control 2

ASCII: 12 hex

EBCDIC: 12 hex

UNICODE: DEVICE CONTROL TWO

Also known as ~~T~~APE; used to start paper tape punch

Control-R

DC3

device control 3

DC3 — Device Control 3

ASCII: 13 hex

EBCDIC: 13 hex

UNICODE: DEVICE CONTROL THREE

Also known as XOFF (transmit off); used to stop paper tape reader

Control-S

DC4

device control 4

DC4 — Device Control 4

ASCII: 14 hex

UNICODE: DEVICE CONTROL FOUR

Also known as TAPE; used to stop paper tape punch

Control-T

RES/ENP

restore, enable

presentation

RES/ENP — Restore, Enable, Presentation

EBCDIC: 14 hex

Resume output (after BYP/INP).

NAK

negative

acknowledge

NAK — Negative Acknowledge

ASCII: 15 hex (originally [1963] called ERR)

UNICODE: NEGATIVE ACKNOWLEDGE

NL

new line

NL — New Line

extended ASCII: 85 hex

EBCDIC: 15 hex

Line break.

SYN

sync

SYN — Synchronous Idle

ASCII: 16 hex (originally [1963] called SYNC)

UNICODE: SYNCHRONOUS IDLE

ETB

end of

transmission block

ETB — End of Transmission Block

ASCII: 17 hex (originally [1963] called LEM)

UNICODE: END OF TRANSMISSION BLOCK

POC

program operator

communicaton

POC — Program Operator Communicaton

EBCDIC: 17 hex

Followed by two one-byte operators that identify the specific function, for example a light or function key.

CAN

cancel

CAN — Cancel

ASCII: 18 hex (originally [1963] called S0)

EBCDIC: 18 hex

UNICODE: CANCEL

EM

end of medium

EM — End of Medium

ASCII: 19 hex (originally [1963] called S1)

EBCDIC: 19 hex

UNICODE: END OF MEDIUM

SUB

substitute

SUB — Substitute

ASCII: 1A hex (originally [1963] called S2; then [1965] called SS)

UNICODE: SUBSTITUTE

UBS

unit backspace

UBS — Unit Backspace

EBCDIC: 1A hex

A fractional backspace.

ESC

escape

ESC — Escape

ASCII: 1B hex (originally [1963] called S3)

UNICODE: ESCAPE

CU1

customer use one

CU1 — Customer Use One

EBCDIC: 1B hex

Not used by IBM; for customer use.

FS

file separator

FS — File Separator

ASCII: 1C hex (originally [1963] called S4)

EBCDIC: 1C hex (called IFS)

UNICODE: INFORMATION SEPARATOR FOUR

GS

group separator

GS — Group Separator

ASCII: 1D hex (originally [1963] called S5)

EBCDIC: 1D hex (called IGS)

UNICODE: INFORMATION SEPARATOR THREE

RS

record separator

RS — Record Separator

ASCII: 1E hex (originally [1963] called S6)

EBCDIC: 1E hex (called IRS)

UNICODE: INFORMATION SEPARATOR TWO

IUS/ITB

intermediate

transmission block

**IUS/ITB — Interchange Unit
Separator/Intermediate Transmission Block**

EBCDIC: 1F hex

Either used as an information separator to terminate a block called a "unit" (as in ASCII; see [US](#)), or used as a transmission control code to delimit the end of an intermediate block.

DS

digit select

DS — Digit Select

EBCDIC: 20 hex

Used by S/360 CPU edit (ED) instruction.

SOS

start of

significance

SOS — Start of Significance

EBCDIC: 21 hex

Used by S/360 CPU edit (ED) instruction.

FS

field separator

FS — Field Separator

EBCDIC: 22 hex

Used by S/360 CPU edit (ED) instruction.

WUS

word underscore

WUS — Word Underscore

EBCDIC: 23 hex

Underscores the immediately preceding word.

DEL

delete

DEL — Delete

ASCII: 7F hex

EBCDIC: 07 hex

UNICODE: DELETE

/boot

directory:

Directory of files needed to boot or start your computer.

/dev

directory:

Directory of the devices connected to your computer (remember, everything, even hardware devices, is treated as a file in UNIX or Linux).

/etc

directory:

Directory of system configuration files, startup procedures, and shutdown procedures.

/home

directory:

The home directories for each user.

/kernel

directory:

Directory of files needed to boot or start your computer.

Directory of other networked systems.

/opt

directory:

Directory of third party software.

/private

directory:

On Mac OS X, this is the location of the UNIX files. It is normally kept hidden from all users in Finder, but is visible in your terminal emulator and shell. Mac OS X has links to the major UNIX directories at the root level so that UNIX and Linux tools can find their files in the standard locations.

/proc

directory:

Directory with information about processes and devices.

/sbin

directory:

Directory with system binaries (programs).

/tmp

directory:

Directory for temporary files.

/users

directory:

The home directories for each user.

/usr

directory:

Directory with user binaries (programs), libraries, manuals, and docs.

/var

directory:

Directory with variable files.

NOTE: This document was released almost a year *before* the language was released.

From the [IBM Programmer's Reference Manual FORTRAN Automatic Coding System for the IBM 704](#):

THE FORTRAN SYSTEM

The IBM Mathematical Formula Translating System
FORTRAN is an automatic coding system for the IBM 704 EDPM. More precisely, it is a 704 program which accepts a source program written in a language — the FORTRAN language — closely resembling the ordinary language of mathematics, and which produces an object program in 704 machine language, ready to be run on a 704.

FORTRAN therefore in effect transforms the 704 into a machine with which communication can be made in a language more concise and more familiar than the 704 language itself. The result should be a considerable reduction in the training required to program, as well as in the time consumed in writing programs and eliminating their errors.

Among the features which characterize the FORTRAN system are the following:

Size of Machine Required

The system has been designed to operate on a "small" 704, but to write object programs for any 704. (For further details, see the section on Source and Object Machines in Chapter 7.) If an object program is produced which is too large for the machine on which it is to be run, the programmer must subdivide the program.

Efficiency of the Object Program

Object programs produced by FORTRAN will nearly as efficient as those written by good programmers.

Scope of Applicability

The FORTRAN language is intended to be capable of expressing any problem of numerical computation. In particular, it deals easily with problems containing large sets of formulae and many variables, and it permits any variable to have up to three independent subscripts.

However, for problems in which machine words have a logical rather than a numerical meaning it is less satisfactory, and it may fail entirely to express some such problems. Nevertheless, many logical operations not directly expressible in the FORTRAN language can be obtained by making use of the provisions for incorporating library routines.

Inclusion of Library Routines

Pre-written routines to evaluate any single-valued functions of any number of arguments can be made available for incorporation into object programs by placing them on the master FORTRAN tape.

Provisions for Input and Output

Certain statements in the FORTRAN language cause the object program to be equipped with its necessary input and output programs. Those which deal with decimal information include conversion to or from binary, and permit considerable freedom of format in the external medium.

Nature of Fortran Arithmetic

Arithmetic in the object program will generally be performed with single-precision 704 floating point numbers. These numbers provide 27 binary digits (about 8

decimal digits) of precision, and may have magnitudes between approximately 10^{-38} and 10^{38} , and zero. Fixed point arithmetic, but for integers only, is also provided.

CHAPTER 1. GENERAL PROPERTIES OF A FORTRAN SOURCE PROGRAM

A FORTRAN source program consists of a sequence of FORTRAN *statements*. There are 32 different types of statements, which are described in detail in the chapters which follow.

Keypunching the Program

Each statement is punched on a separate card. If a statement is too long to fit on a single card it can be continued over as many as 9 additional *continuation* cards. For each statement the initial card must contain either a zero or blank in column 6; on continuation cards column 6 must not contain a zero or blank, and it should be used to number the continuation cards consecutively from 1 to 9.

If a statement is too long to fit on a single line of the coding form, the programmer can signal to the keypuncher that he has continued on to the next line by placing a mark in the column labeled CONTINUATION.

The order of the statements is governed solely by the order of the cards. However, any number less than 2^{15} (=32768) may be associated with any statement by punching it in columns 1-5 of the initial card bearing that statement. Thereupon this number becomes the *statement number* of that statement. Statement numbers, besides permitting cross-references within the source code, also help the programmer to correlate the object program with his source code.

Punching the character C in column 1 will cause the card to be ignored by FORTRAN. Such cards may therefore be used to carry comments which will appear when the deck is listed.

Columns 73-80 are not read by FORTRAN and may be punched with any desired identifying information.

The statements themselves are punched in columns 7-72, both on initial and continuation cards. Thus a statement consists of not more than $10 \times 66 = 660$ characters. A table of the admissible characters in FORTRAN is given in Appendix A.

Blank characters, except in column 6, are simply ignored by FORTRAN, and the programmer may use blanks freely to improve the readability of his FORTRAN

listing.

Preview of the Fortran Statements

The 32 types of statement, of which every FORTRAN program is composed, may be classified as follows:

1. The *arithmetic formula*, which causes the object program to carry out a numerical computation. Chapter 2 discusses the symbols available for referring to constants and variables, and Chapter 3 the combining of these into arithmetic formulas.
2. The 15 *control statments*, which govern the flow of control in the object program. These are discussed in Chapter 4.
3. The 13 *input-output statements*, which provide the object program wiht its necessary input and putput routines. These are discussed in Chapter 5.
4. Finally, the 3 *specification statements*, which provide various information required or desirable to make the object program efficient, are discussed in Chapter 6.

Chapters 7 and 8, which conclude the manual, give additional detail on various topics and examples of FORTRAN programming.

This section needs repair. I have the last PDF created, but my source files were stolen. Unfortunately, Adobe Acrobat does a horrible job of converting a PDF back into HTML (the source I use to create the book you are looking at now). It will take substantial time to repair these chapters.

Copyright © 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2009, 2010, 2011, 2012, 2013, 2014 Milo (from version 56 of the UNIX and Linux System Administartion and Shell Programming book)

This guide includes material from the <http://www.osdata.com/> website and the text book on computer programming.

Distributed on the honor system. Print and read free for personal, non-profit, and/or educational purposes. If you like the book, you are encouraged to donate to [Help Annie GoFundMe page](#).

Professors and Teachers: Feel free to take a copy of this PDF and make it available to your class (possibly through your academic website). This way everyone in your class will have the same copy (with the same page numbers) despite my continual updates. Please try to avoid posting it to the public internet (to avoid old copies confusing things), but if you do post it the internet, please take it down when the class ends. You can post the same or a newer version for each succeeding class. Please remove old copies after the class ends to prevent confusing the search engines. You can contact me with a specific version number and class end date and I will put it on my website. You can request my source files to create a custom version for your class.

Unix and Linux System Administration and Shell Programming

chapter 0

This guide looks at Unix (and Linux) shell programming and system administration.

This guide covers the basic materials needed for you to understand how to administer your own Linux or Unix server, as well as how to run your own personal desktop version of Linux or Mac OS X.

This guide goes beyond the typical material in a shell scripting class and presents material related to either downloading and compiling existing software (including ports to new hardware and/or operating systems) or for preparing your own software for release via the internet.

requirements

You need a willingness to learn.

You need a working computer or server or access to one.

The computer needs a working version of Unix, Linux, Mac OS X, AIX, HP/UX, Solaris, etc. (it can be a dual boot computer).

A working connection to the internet is recommended (preferably a high speed connection), but not required.

You may use LAMP on Linux, MAMP on Mac OS X, or WAMP on Windows to set up and experiment with a local web server.

You may want to have a domain name of your own and web hosting to try out controlling a server. You can use any other major hosting providers to obtain these services.

options

Almost anyone can learn this material. It isn't complicated. It really helps if you enjoy doing this kind of thing. You will learn faster and you will enjoy the work. If you don't enjoy this kind of computer activity, please think carefully about whether or not you want to spend decades at a job you hate.

Almost anyone can slog through and learn at least some of this material, but an aptitude for this kind of material greatly helps learning. Mathematical ability is useful, but not necessary.

Many portions of this guide require root or administrator access. While you learn better if you can actually try out each command for yourself, you can just read about root material if you don't have root or administrator access.

Some portions of this guide may require special software. Most of the software can be downloaded for free. The Windows Subsystem for Linux runs on Windows 10 version 2004 and higher (build 19041 and higher) or Windows 11. This is available for free from Microsoft at <https://learn.microsoft.com/en-us/windows/wsl/about>. Those with Mac OS X should have the Developer Tools installed. These are available for free on either the install DVD/CD or from Apple at <https://connect.apple.com/>

A static IP address is in general useful and is required for some portions of this guide.

proletarian

This guide is intentionally proletarian and is specifically intended to allow anyone, regardless of socio-economic position, to have access to the basic information and the power against the established authorities that such knowledge provides.

This subversive intent is consistent with Linux, which was created by a college student who couldn't afford the dominant tools of the time.

This contrasts strongly with Apple's Macintosh, Mac OS X, and iOS, all of which are specifically targeted for sales to the trendiest members of the wealthy class. Apple does offer a discount to school children, but that discount is smaller than the discount Apple offers to large corporations.

This also contrasts with Microsoft's Windows, which is specifically targeted for

sales to large corporations and their employees.

And this contrasts with Google's Android, which is specifically targeted for businesses. The users of Android products are part of Google's product, not the customer. The customers are businesses who want detailed information on the masses for purposes of advertising.

This guide is intended to make knowledge available to everyone, especially those who are increasingly being shut out of the mainstream education system.

goals

Please note that at the time this paragraph was written, these goals are not yet implemented in the text. Now is a good time to make suggestions on modifications of the goals.

The reader will understand the Unix/Linux computing environment and history.

The reader will be able to access the Unix/Linux system and perform basic operations, including using help features.

The reader will be able to run common command-line tools such as grep, sed, and awk.

The reader will be able to access and manipulate files and directories, including basic and advanced directory and file management. The reader will be able to use file system utilities.

The reader will be able to design and implement file system security. The reader will be able to print documents.

The reader will be able to perform system backups and restores. The reader will be able to troubleshoot system processes.

The reader will be able to perform environment customization.

The reader will become acquainted with networks, web servers, web clients, transaction security, and other basic network concepts.

The reader will be able to run Bash, Zsh, and other UNIX/Linux shell scripts and GNU/Linux command line applications including tools (such as vim, emacs, and tmux).

The reader will be able to run common languages (such as Node.JS, Javascript, Python, Ruby, C/C++, C#, F#, Rust, and Go).

The reader will learn how to create a web page that accepts input, program the server response, and interface the input with a database.

The reader will understand web server functionality and be able to install and configure Apache. The reader will be able to work with, understand, and configure DNS functionality.

The reader will be able to set up and maintain his or her own general purpose server, including hosting, server administration, security, user interactivity, and database integration.

The reader will be familiar with SQL Server architecture and able to efficiently administer and maintain SQL Server instances and databases.

The reader will be able to run common services (such as SSHD, MySQL, Apache, lighttpd, MongoDB, and PostgreSQL).

The reader will be able to install additional software using either a distribution package manager or compile from source code.

The reader will be able to secure a web server and its websites.

personal reference book

I strongly recommend that each reader print out this PDF and the manual pages from your computer and place the resulting pages into a looseleaf binder. That will allow you to organize the chapters in the order that makes the most sense for you. It will also allow you to make notes in the margins. It will allow you to easily add materials from other sources. The resulting binder will be personalized to meet your individual needs.

If you have a limited printing budget (ink is expensive), print out portions of this PDF as needed.

cool shell tricks for Unix, Mac OS X, and Linux

chapter 1

This chapter looks at cool shell tricks for Unix, Linux, and Mac OS X to give you an idea of the power of the shell.

A quick summary of how to get to the shell is included in this chapter (more detailed explanations, including what to do when things go wrong, are in following chapters.

If you need a primer on computer terminology, please look at the [next chapter](#) on basics of computers.

WARNING: Never trust any Terminal/Shell commands you find on the internet. Only run shell commands you understand. In particular, *never* run anything that includes `sudo` anywhere in the command line unless you are absolutely certain what the command does. When you run a command line with `sudo` you are giving permission to have complete (possibly destructive) control of your computer at the root level. And, yes, this advice applies even to this nerdary. Don't run any commands with `sudo` unless you know for sure what you are doing.

cool shell tricks

This chapter has a handful of cool shell tricks. These are intended to show a beginner that a command line shell can be as fun as any graphic user interface and get across the idea that there is a lot of power in the shell that simply doesn't exist in a standard graphic user interface.

definitions

Unix is one of the ground-breaking operating systems from the early days of computing. Mac OS X is built on top of Unix. Linux is a variation of Unix.

The shell is the command line interface for running Unix (and Mac OS X and Linux) with just typing (no mouse).

operating system The software that provides a computer's basic tasks, such as scheduling tasks, recognizing input from a keyboard, sending output to a display screen or printer, keeping track of files and folders (directories), running applications (programs), and controlling peripherals. Operating systems are explained in more detail for beginners just below.

Unix Unix (or UNIX) is an interactive multi-user multitasking timesharing operating system found on many types of computers. It was invented in 1969 at AT&T's Bell Labs by a team led by Ken Thompson and Dennis Ritchie. Some versions of Unix include: AIX, A/UX, BSD, Debian, FreeBSD, GNU, HP-UX, IRIX, Linux, Mac OS X, MINIX, Mint, NetBSD, NEXTSTEP, OpenBSD, OPENSTEP, OSF, POSIX, Red Hat Enterprise, SCO, Solaris, SunOS, System V, Ubuntu, Ultrix, Version 7, and Xenix.

Linux An open-source version of the Unix operating system.

graphical user interface A graphical user interface (GUI) is a windowing system, with windows, icons, and menus, operated by a mouse, trackball, touch screen, or

other pointing device, used for controlling an operating system and application programs (apps). The Macintosh, Windows, Gnome, and KDE are famous examples of graphical user interfaces.

command line interface A command line interface (CLI or command line user interface CLUI) is a text only interface, operated by a keyboard, used for controlling an operating system and programs.

shell The shell is the command line interface for Unix, Linux, and Mac OS X. In addition to interpreting commands, it is also a programming language.

shell uses

The Unix shell is a very powerful programming language, with access to hundreds of useful tools that are designed to work with each other, and access to the very heart of the operating system (although this is only available to the root or superuser account for security reasons).

Unix (and therefore also Mac OS X and Linux) has more than 200 basic commands (also called tools or utilities) that are distributed with the standard operating system. This collection and the ease with which they work together is the major source of the power of Unix. The vast majority of these standard tools are designed to be used from a command line (the shell).

The shell is most commonly used to control servers. Servers are the computers used to host websites. The most common operating system for the world's web servers is Linux. If you learn shell scripting and system administration, you can run your own server and possibly get a job.

The shell can be used to control a desktop or portable computer. Some tablets and smart phones have a shell. The iPhone actually has a shell, but it can't be accessed without jailbreaking the iPhone.

The shell will often run even when a computer is partly broken. Both Mac OS X and Linux (as well as almost all versions of Unix) can be run in a special single user mode. This starts up the computer or server with just the command line shell running. This can be used to service a computer or server, including both diagnosis and repair.

The shell is extremely useful for programming. Even when a programmer uses a graphical integrated development environment (IDE), the programmer is likely to still heavily use the shell for programming support. Some IDEs even have shell access built-in.

Shell scripts are widely used by system administrators for performing common tasks.

command line interfaces

Before the widespread introduction of graphic user interfaces (GUI), computers were controlled either by punched cards, paper tape, or magnetic tape (a batch system) or a command line interface (CLI) using an interactive terminal (originally, some variation of a teletype machine from the telegraph technology). The earliest computers were controlled by front panel lights and switches or even by directly changing the wiring.

The command line interface on interactive terminals was a major advance. Because of limitations of the early hardware (at a time when a computer's entire memory might be measured in hundreds of bytes), the first CLIs compressed the number of characters, using two or three letter abbreviations for commands and single character switches for options to commands.

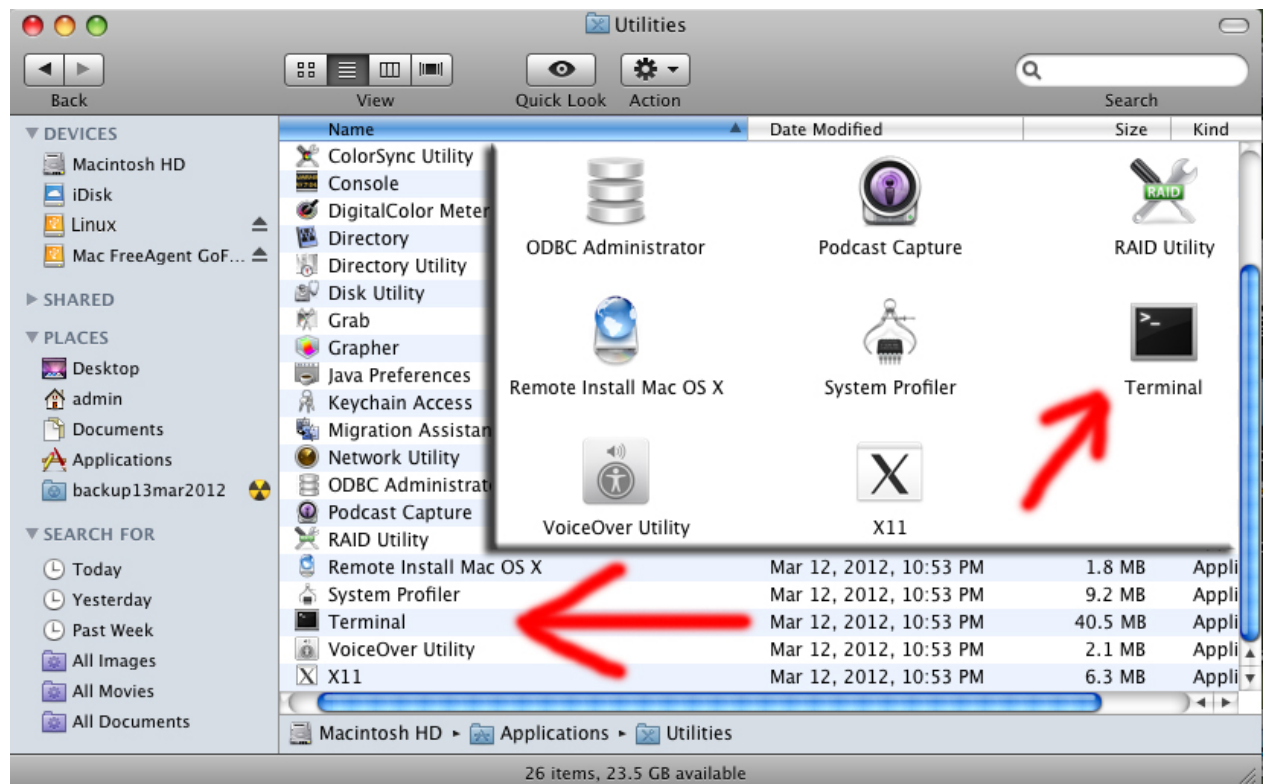

The modern Unix/Linux shells carry over this early limitation because there is the need to remain backward compatible and still run shell scripts that are decades old, but essential to continued operation of legacy systems.

This historical limitation makes it difficult for newcomers to figure out how to use a Unix/Linux shell.

how to find Terminal

You can run these commands by copying and pasting into Terminal, a program that is available for free and preinstalled on Mac OS X and most versions of Linux. Some of these commands will only work on a particular operating system (this will be indicated), but most can be run from Mac OS X, any distribution Linux, and any kind of Unix.

On Mac OS X, you will find Terminal by opening the Applications folder (on your main hard drive), then opening the Utilities folder, then scrolling down the list until you find Terminal or Terminal.app. Drag it to your Dock, because you will be using it a lot.

On Ubuntu Linux, look in Applications menu > Accessories > Terminal. Single click and hold, then drag to your panel, because you will be using it a lot.

On some versions of Linux, you can press the CONTROL and the ALT and the F1 keys all at once to bring up Terminal.

In Gnome, use the Applications menu > Accessories > Terminal or the keyboard shortcut of CONTROL and ALT and T (all at the same time).

In KDE, use the KMenu > System > Terminal Program (Konsole).

In Linux Mint you can use the keyboard shortcut of holding down the CONTROL and ALT and T keys all at once.

As a last resort, you can use the file search feature in Linux or Mac OS X and search for “Terminal”.

warnings

Be careful about any hints you find on the internet. There are people who suggest very destructive commands in the guise of a useful or fun hint just to trick beginners into destroying their computers.

Be very careful if you use any command that includes `sudo`, because it runs at the root level, allowing complete access to the entire computer with all safeguards turned off. Very powerful. Potentially very destructive in a hurry. There are legitimate hints and cool tricks that use `sudo`, but be careful to type them *exactly* as you see them in the hint (or copy and paste) and only use `sudo` hints from trusted sources.

Watch out for anything that includes the command `rm` or `rm *`. That is the remove command versions of it can literally wipe out all of your hard drives in seconds in such a way that only a very expensive data recovery specialist (thousands of dollars) can get your data back.

Also watch out for anything that includes the command `shred`. That is the secure delete and even the most expensive data recovery specialist in the world can't get your

data back.

cool ASCII art

If your computer is connected to the internet, you can use the shell to watch the entire *Star Wars Episode IV* in old fashioned ASCII. Type `telnet towel.blinkenlights.nl` followed by ENTER or RETURN. If you have IPv6, you get extra scenes and color support.

```
$ telnet towel.blinkenlights.nl
```

play a CD

On Linux you can play a CD from the command line. The following example plays the first track of the CD. Change the number to play a different track.

```
$ cdplay play 1
```

On Linux you can get a free coffee cup holder (eject the CD-ROM tray).

```
$ eject
```

basics of computers

chapter 2

summary

This chapter will cover some very basic information on how computers work. I'm not trying to insult anyone's intelligence. This material addresses some of the questions asked by novice test readers.

major desktop systems

There are only three major desktop computing systems left in common existence: Windows, Macintosh, and Linux.

Apple **Macintosh** was the first commercially successful graphical user interface. That is, a computer where one uses a mouse (or other pointing device) and icons, windows, and menus to control the computer. Since the turn of the century, **Mac OS X** has actually been built on top of Unix.

Unix is the last major survivor of the mainframe era (back when computers were so large that they took up an entire room, or even an entire building). Its big advantage of its competitors was that it is available in free open source versions and it runs on an extremely wide variety of computer hardware (including many computers that are no longer used).

Microsoft **Windows** is loosely based on the Macintosh and for decades dominated the personal computer market.

Linux is a very popular open source variation of Unix. It is the most common operating system for servers and the third most popular desktop computing operating system. In its early days it was very geeky and very difficult to use, but it now sports two major graphical user interfaces (Gnome and KDE) and is reasonably easy to use.

FreeBSD is the next most popular open source version of Unix and is commonly used for servers. **Solaris** is the next most popular commercial version of Unix. IBM and HP both have their own commercial versions of Unix.

the shell

Unix (and therefore also Mac OS X and Linux) has more than 200 basic commands (also called tools or utilities) that are distributed with the standard operating system. This collection and the ease with which they work together is the major source of the power of Unix. The vast majority of these standard tools are designed to be used from a command line (the shell).

A shell is primarily a command interpreter.

In a graphical user interface such as Macintosh or Windows, the user controls the computer and programs primarily through pointing and clicking, supplemented by some typing.

In a shell, all of the commands are typed. The shell figures out the meaning of what you typed and then has the computer do as instructed.

But the shell is much more than just a command interpreter. It is also a complete programming language.

Because the shell is a complete programming language, with sequences, decisions, loops, and functions, it can do things well beyond pointing and clicking. It can take control of your computer and react to changing circumstances.

Programming languages are used to make all of the computer programs and smart phone apps you've ever seen or used. Your imagination is the only limit on the power of the shell. Anything that can be done with a computer can be done with the shell.

operating systems

The seven layers of software are (top to bottom): Programs; System Utilities; Command Shell; System Services; User Interface; Logical Level; and Hardware Level. A Graphics Engine straddles the bottom three layers. Strictly speaking, only the bottom two levels are the operating system, although even technical persons will often refer to any level other than programs as part of the operating system (and Microsoft tried to convince the Justice Department that their web browser application is actually a part of their operating system).

The following are examples of each category:

- Programs: Examples of Programs include your word processor, spreadsheet, graphics programs, music software, games, etc.
- System Utilities: Examples of System Utilities include file copy, hard drive repair, and

similar items. On the Macintosh, all the Desk Accessories (calculator, key caps, etc.) and all of the Control Panels are examples of System Utilities.

- **Command Shell:** The Command Shell on the Macintosh is the Finder and was the first commercially available graphic command shell. On Windows, the Command Shell is a poorly integrated combination of the File Manager and the Program Manager. The command line (C:\ prompt) of MS-DOS or Bourne Shell of Unix are examples of the older style text-based command shells.
- **System Services:** Examples of System Services are built-in data base query languages on mainframes or the QuickTime media layer of the Macintosh.
- **User Interface:** Until the Macintosh introduced Alan Kay's (inventor of the personal computer, graphic user interfaces, object oriented programming, and software agents) ground breaking ideas on human-computer interfaces, operating systems didn't include support for user interfaces (other than simple text-based shells). The Macintosh user interface is called the Macintosh ToolBox and provides the windows, menus, alert boxes, dialog boxes, scroll bars, buttons, controls, and other user interface elements shared by almost all programs.
- **Logical Level of Operating System:** The Logical Level of the operating system provides high level functions, such as file management, internet and networking facilities, etc.
- **Hardware Level of Operating System:** The Hardware Level of the operating system controls the use of physical system resources, such as the memory manager, process manager, disk drivers, etc.
- **Graphics Engine:** The Graphics Engine includes elements at all three of the lowest levels, from physically displaying things on the monitor to providing high level graphics routines such as fonts and animated sprites.

Human users normally interact with the operating system indirectly, through various programs (application and system) and command shells (text, graphic, etc.). The operating system provides programs with services through system programs and Application Program Interfaces (APIs).

basics of computer hardware

A **computer** is a programmable machine (or more precisely, a programmable sequential state machine). There are two basic kinds of computers: analog and digital.

Analog computers are analog devices. That is, they have continuous states rather than discrete numbered states. An analog computer can represent fractional or irrational values exactly, with no round-off. Analog computers are almost never used outside of experimental settings.

A **digital computer** is a programmable clocked sequential state machine. A digital computer uses discrete states. A binary digital computer uses two discrete states, such as positive/negative, high/low, on/off, used to represent the binary digits zero and one.

The French word **ordinateur**, meaning that which puts things in order, is a good description of the most common functionality of computers.

what are computers used for?

Computers are used for a wide variety of purposes.

Data processing is commercial and financial work. This includes such things as billing, shipping and receiving, inventory control, and similar business related functions, as well as the “electronic office”.

Scientific processing is using a computer to support science. This can be as simple as gathering and analyzing raw data and as complex as modelling natural phenomenon (weather and climate models, thermodynamics, nuclear engineering, etc.).

Multimedia includes **content creation** (composing music, performing music, recording music, editing film and video, special effects, animation, illustration, laying out print materials, etc.) and multimedia playback (games, DVDs, instructional materials, etc.).

Servers includes web servers. Every website is hosted on a computer called a server. When you connect to a website in your web browser, your computer connects to a web server that provides your web browser with all of the parts (text, pictures, Flash, style sheets, JavaScripts, etc.) needed for your web browser to display any particular web page.

parts of a computer

The classic crude oversimplification of a computer is that it contains three elements: processor unit, memory, and I/O (input/output). The borders between those three terms are highly ambiguous, non-contiguous, and erratically shifting.

A slightly less crude oversimplification divides a computer into five elements: arithmetic and logic subsystem, control subsystem, main storage, input subsystem, and output subsystem.

- processor
- arithmetic and logic
- control
- main storage
- external storage
- input/output overview
- input
- output

processor

The **processor** is the part of the computer that actually does the computations. This is sometimes called an **MPU** (for main processor unit) or **CPU** (for central processing unit or central processor unit).

A processor typically contains an arithmetic/logic unit (**ALU**), control unit (including processor flags, flag register, or status register), internal buses, and sometimes special function units (the most common special function unit being a floating point unit for floating point arithmetic).

Some computers have more than one processor. This is called **multi-processing**.

The major kinds of digital processors are: CISC, RISC, DSP, GPU, and hybrid.

CISC stands for Complex Instruction Set Computer. Mainframe computers and minicomputers were CISC processors, with manufacturers competing to offer the most useful instruction sets. Many of the first two generations of microprocessors were also CISC.

RISC stands for Reduced Instruction Set Computer. RISC came about as a result of academic research that showed that a small well designed instruction set running compiled programs at high speed could perform more computing work than a CISC

running the same programs (although very expensive hand optimized assembly language favored CISC).

DSP stands for Digital Signal Processing. DSP is used primarily in dedicated devices, such as MODEMs, digital cameras, graphics cards, and other specialty devices.

GPU stands for Graphics Processing Unit. GPUs are specialized electronic circuits designed to manipulate and alter memory to accelerate the creation of images in a frame buffer intended for output to a display device.

Hybrid processors combine elements of two or three of the major classes of processors.

arithmetic and logic

An arithmetic/logic unit (**ALU**) performs integer arithmetic and logic operations. It also performs shift and rotate operations and other specialized operations. Usually floating point arithmetic is performed by a dedicated floating point unit (**FPU**), which may be implemented as a co-processor.

Usually floating point arithmetic is performed by a dedicated floating point unit (**FPU**), which may be implemented as a co-processor.

control

Control units are in charge of the computer. Control units fetch and decode machine instructions. Control units may also control some external devices.

A **bus** is a set (group) of parallel lines that information (data, addresses, instructions, and other information) travels on inside a computer. Information travels on buses as a series of electrical pulses, each pulse representing a one bit or a zero bit (there are trinary, or three-state, buses, but they are rare). An **internal bus** is a bus inside the processor, moving data, addresses, instructions, and other information between registers and other internal components or units. An **external bus** is a bus outside of the processor (but inside the computer), moving data, addresses, and other information between major components (including cards) inside the computer. Some common kinds of buses are the system bus, a data bus, an address bus, a cache bus, a memory bus, and an I/O bus.

main storage

Main storage is also called **memory** or internal memory (to distinguish from

external memory, such as hard drives).

RAM is Random Access Memory, and is the basic kind of internal memory. RAM is called “random access” because the processor or computer can access *any* location in memory (as contrasted with sequential access devices, which must be accessed in order). RAM has been made from reed relays, transistors, integrated circuits, magnetic core, or anything that can hold and store binary values (one/zero, plus/minus, open/close, positive/negative, high/low, etc.). Most modern RAM is made from integrated circuits. At one time the most common kind of memory in mainframes was magnetic core, so many older programmers will refer to main memory as **core memory** even when the RAM is made from more modern technology. **Static RAM** is called static because it will continue to hold and store information even when power is removed. Magnetic core and reed relays are examples of static memory. **Dynamic RAM** is called dynamic because it loses all data when power is removed. Transistors and integrated circuits are examples of dynamic memory. It is possible to have battery back up for devices that are normally dynamic to turn them into static memory.

ROM is Read Only Memory (it is also random access, but only for reads). ROM is typically used to store things that will never change for the life of the computer, such as low level portions of an operating system. Some processors (or variations within processor families) might have RAM and/or ROM built into the same chip as the processor (normally used for processors used in standalone devices, such as arcade video games, ATMs, microwave ovens, car ignition systems, etc.). **EPROM** is Erasable Programmable Read Only Memory, a special kind of ROM that can be erased and reprogrammed with specialized equipment (but not by the processor it is connected to). EPROMs allow makers of industrial devices (and other similar equipment) to have the benefits of ROM, yet also allow for updating or upgrading the software without having to buy new ROM and throw out the old (the EPROMs are collected, erased and rewritten centrally, then placed back into the machines).

Registers and flags are a special kind of memory that exists inside a processor. Typically a processor will have several internal registers that are much faster than main memory. These registers usually have specialized capabilities for arithmetic, logic, and other operations. Registers are usually fairly small (8, 16, 32, or 64 bits for integer data, address, and control registers; 32, 64, 96, or 128 bits for floating point registers). Some processors separate integer data and address registers, while other processors have general purpose registers that can be used for both data and address purposes. A processor will typically have one to 32 data or general purpose registers (processors with separate data and address registers typically split the register set in half). Many processors have special floating point registers (and some processors have general purpose registers that can be used for either integer or floating point arithmetic). Flags are single bit memory used for testing, comparison, and conditional operations (especially conditional branching).

external storage

External storage (also called **auxillary storage**) is any storage other than main memory. In modern times this is mostly hard drives and removeable media (such as floppy disks, Zip disks, DVDs, CDs, other optical media, etc.). With the advent of USB and FireWire hard drives, the line between permanent hard drives and removeable media is blurred. Other kinds of external storage include tape drives, drum drives, paper tape, and punched cards. Random access or indexed access devices (such as hard drives, removeable media, and drum drives) provide an extension of memory (although usually accessed through logical file systems). Sequential access devices (such as tape drives, paper tape punch/readers, or dumb terminals) provide for off-line storage of large amounts of information (or back ups of data) and are often called I/O devices (for input/output).

input/output overview

Most external devices are capable of both input and output (I/O). Some devices are inherently input-only (also called read-only) or inherently output-only (also called write-only). Regardless of whether a device is I/O, read-only, or write-only, external devices can be classified as block or character devices.

A **character** device is one that inputs or outputs data in a stream of characters, bytes, or bits. Character devices can further be classified as serial or parallel. Examples of character devices include printers, keyboards, and mice.

A **serial** device streams data as a series of bits, moving data one bit at a time. Examples of serial devices include printers and MODEMs.

A **parallel** device streams data in a small group of bits simultaneously. Usually the group is a single eight-bit byte (or possibly seven or nine bits, with the possibility of various control or parity bits included in the data stream). Each group usually corresponds to a single character of data. Rarely there will be a larger group of bits (word, longword, doubleword, etc.). The most common parallel device is a printer (although most modern printers have both a serial and a parallel connection, allowing greater connection flexibility).

A **block** device moves large blocks of data at once. This may be physically implemented as a serial or parallel stream of data, but the entire block gets transferred as single packet of data. Most block devices are random access (that is, information can be read or written from blocks anywhere on the device). Examples of random access block devices include hard disks, floppy disks, and drum drives. Examples of sequential access block devcies include magnetic tape drives and high speed paper tape readers.

input

Input devices are devices that bring information into a computer.

Pure input devices include such things as punched card readers, paper tape readers, keyboards, mice, drawing tablets, touchpads, trackballs, and game controllers.

Devices that have an input component include magnetic tape drives, touchscreens, and dumb terminals.

output

Output devices are devices that bring information out of a computer.

Pure output devices include such things as card punches, paper tape punches, LED displays (for light emitting diodes), monitors, printers, and pen plotters.

Devices that have an output component include magnetic tape drives, combination paper tape reader/punches, teletypes, and dumb terminals.

Unix and Linux

history

chapter 3

summary

This chapter looks at the history of Unix and Linux.

The history can help you understand why things are the way they are in Unix and Linux.

Of particular concern are:

- the small storage space of early computers which resulted in short command names and one character options
- the switchover from teletype I/O to video terminal I/O
- the use of eight bit bytes, ASCII characters, and plain text for interprocess communication
- treating files as collections of bytes and devices, directories, and certain kinds of inter-process communications as files
- the use of small, single-purpose programs that can be easily combined together to perform complex tasks

command line interface

Before the widespread introduction of graphic user interfaces (GUI), computers were controlled either by punched cards, paper tape, or magnetic tape (a batch system) or a command line interface (CLI) using an interactive terminal (originally, some variation of a teletype machine from the telegraph technology). The earliest computers

were controlled by front panel lights and switches or even by directly changing the wiring.

The command line interface on interactive terminals was a major advance. Because of limitations of the early hardware (at a time when a computer's entire memory might be measured in hundreds of bytes), the first CLIs compressed the number of characters, using two or three letter abbreviations for commands and single character switches for options to commands.

The modern Unix/Linux shells carry over this early limitation because there is the need to remain backward compatible and still run shell scripts that are decades old, but essential to continued operation of legacy systems.

This historical limitation makes it difficult for newcomers to figure out how to use a Unix/Linux shell.

Unix history

When Unix came into existence digital computers had been in commercial use for more than a decade.

Mainframe computers were just starting to be replaced by minicomputers. The IBM 360 mainframe computer and clones by other manufacturers was still the dominant computer. The VAX, with its virtual memory addressing, was still in development. Microcomputers were just an experimental idea. The CDC mainframe, a forerunner of the more famous Cray supercomputers, was still the world's fastest computer.

COBOL was the most common programming language for business purposes. **FORTRAN** was the most popular programming language for scientific and systems programming. **PL/I** was a common third language. **ALGOL** was dominate in the academic community.

Most data entry was still performed using punched cards. Directly connected terminals were typically teletypes (TTY), a technology originally developed for telegraph systems. New terminals combining a keyboard and a monitor were still rare. These were also called CRTs (for Cathode Ray Tube) or dumb terminals or smart terminals (depending on the capabilities). Unlike modern black letters on white background terminals (pioneered with the Apple Lisa and Apple Macintosh) and full color monitors (popularized with the Atari and Commodore Amiga personal computers), these monitors were a single color phosphor (usually green) on a dark gray background. Even though disk drives existed, they were expensive and had small capacities. Magnetic tape was still the most commonly used form of storage of large data sets. Minicomputers were making use of punched paper tape.

Interactive computing was still rare.

Bell Telephone Laboratories was still using the BESYS operating system from 1957. In 1964, Bell Labs decided to update their operating system, leading to a 1965 partnership between the Massachusetts Institute of Technology (MIT), AT&T Bell Labs, and General Electric to create an experimental operating system called Multics (MULTIplexed operating and Computing System) for the GE-645 mainframe computer. AT&T intended to offer subscription-based computing services over the phone lines, an idea similar to the modern cloud approach to computing.

While the Multics project had many innovations that went on to become standard approaches for operating systems, the project was too complex for the time.

Bell Labs pulled out of the Multics project in 1969.

Ken Thompson and Dennis Ritchie offered to design a new operating system using a DEC PDP-7 computer that was available at the time.

UNICS (UNIplexed operating and Computing System, a pun on MULTICS) was created at AT&T's Bell Labs in 1969 by a group that included Ken Thompson, Dennis Ritchie, Brian Kernighan, Douglas McIlroy, Michael Lesk, and Joe Ossanna.

This group of researchers, the last of the AT&T employees involved in Multics, decided to attempt the goals of Multics on a much more simple scale.

“What we wanted to preserve was not just a good environment in which to do programming, but a system around which a fellowship could form. We knew from experience that the essence of communal computing, as supplied by remote-access, time-shared machines, is not just to type programs into a terminal instead of a keypunch, but to encourage close communication,” according to Dennis Ritchie.

Unix was originally intended as a programmer's workbench. The original version was a single-user system. As Unix spread through the academic community, more general purpose tools were added, turning Unix into a general purpose operating system.

While Ken Thompson still had access to the Multics environment, he wrote simulations on Multics for Unix's file and paging system.

Ken Thompson ported the Space Travel computer game from Multics to a Digital Equipment Corporation (DEC) PDP-7 he found at Bell Labs.

Ken Thompson and Dennis Ritchie led a team of Bell Labs researchers (the team included Rudd Canaday) working on the PDP-7 to develop a hierarchical file system, computer processes, device files, a command-line interpreter, and a few small utility programs.

Early work was done in a BCPL (Basic Combined Programming Language) a language intended for writing compilers and system software. BCPL was simplified and revised into the B programming language.

By the end of 1969, UNICS had a primitive kernel, an editor, an assembler, a simple shell command interpreter, and a few basic command utilities, including `rm`, `cat`, and `cp`.

The first Unix command shell, called the Thompson shell and abbreviated `sh`, was written by Ken Thompson at AT&T's Bell Labs, was much more simple than the famous Unix shells that came along later. The Thompson shell was distributed with Versions 1 through 6 of Unix, from 1971 to 1975.

In 1970 Dennis Ritchie and Ken Thompson traded the promise to add text processing capabilities to Unix for the use of a Digital Equipment Corporation (DEC) PDP-11/20. The initial version of Unix, a text editor, and a text formatting program called `roff` were all written in PDP-11/20 assembly language.

The PDP-11/20 computer had 24K of RAM. The operating system used 12K. The remaining 12K was split between application programs and a RAM disk. The file size limit was 64K and the disk size limit was 512K.

Soon afterwards `roff` evolved into `troff` with full typesetting capability. The first Unix book, *UNIX Programmer's Manual*, by Ken Thompson and Dennis Ritchie, was published on November 3, 1971. The book described more than 60 commands, including `b` (compile a B program), `chdir` (change working directory), `chmod`, `chown`, `ls`, and `who`.

By 1971, many fundamentally important aspects of Unix were already in place, including file ownership and file access permissions.

The first commercial Unix system was installed in early 1972 at the New York Telephone Co. Systems Development Center under the direction of Dan Gielan. Neil Groundwater build an Operational Support System in PDP-11/20 assembly language.

With funding from the Patent Department, the Unix team upgraded to a DEC PDP-11/45.

In 1972, Dennis Ritchie and Ken Thompson rewrote the B programming language into `C`. Work started on converting Unix to `C`. Unix was originally written in assembly language and B, but by 1973 it had been almost completely converted to the `C language`. At the time it was common belief that operating systems must be written in assembly in order to perform at reasonable speeds. Writing Unix in `C` allowed for easy portability to new hardware, which in turn led to the Unix operating system being used on a wide variety of computers.

Ken Thompson invented the pipe in 1972. Pipes allow the output of one process to be used as the input for another. Pipes allow the Unix philosophy of having many small programs that each do one function very well and then write scripts that combine these small utility programs to accomplish bigger tasks.

By 1973, Unix was running at sixteen (16) sites, all within AT&T and Western Electric. Unix was presented to the public in an October 1973 conference and within six months the number of sites running Unix had tripled.

A version of Unix was published in the July 1974 issue of the *Communications of the ACM*, leading to widespread requests for copies. Under the antitrust consent decree with the U.S. government, Bell Labs was required to give a free copy to anyone who requested it. Ken Thompson personally signed a note for many of these early copies.

Because `C` was a complete, platform-independent programming language and Unix's more than 11,000 lines of code were written in C, it was possible to easily port Unix to any computer platform. And Unix did quickly spread to almost every available computer platform, becoming the first true universal operating system.

In fall of 1974, Ken Thompson went to the University of California at Berkeley to teach for a year. Ken Thompson, Bill Joy, and Chuck Haley worked together to create the Berkeley version of Unix, called the Berkeley Software Distribution, or more commonly BSD.

The source code for BSD Unix was widely distributed to students and other schools. Students at UC-Berkeley and other schools around the world worked on improvements and the BSD Unix replaced the Bell Laboratories Unix as the primary Unix.

BSD Unix added the `vi` editor, the C shell, the `Sendmail` email system, virtual memory, and support for TCP/IP (Transmission Control Protocol/Internet Protocol). Because email was built into the operating system, email was the method Unix used for sending notifications to the system administrator of system status, reports, problems, etc.

The Fifth Edition of Unix was released in 1975 and licensed to universities for free.

The PWB shell or Mashey shell, abbreviated `sh`, was a variation of the Thompson shell that had been augmented by John Mashey and others at Bell Labs. The Mashey shell was distributed with the Programmer's Workbench Unix in 1976.

The Bourne shell, created by Stephen Bourne at AT&T's Bell Labs (in New Jersey) as a scripting language, was released in 1977 as the default shell in the Version 7 Unix release distributed to colleges and universities. It gained popularity with the publication of *The UNIX Programming Environment* by Brian W. Kernighan and Rob Pike. The book was the first commercially published tutorial on shell programming.

The Bourne shell provided process control, variables, regular expressions, flow control, input/output control, and functions.

In 1977, the University of California, Berkeley, released the Berkeley Software Distribution (BSD) version of Unix, based on the 6th edition of AT&T Unix.

The C shell, abbreviated `csh`, was created by Bill Joy, a graduate student at the University of California, Berkeley. With additional work by Michael Ubell, Eric Allman, Mike O'Brien, and Jim Kulp, it was released in the 2BSD release of BSD Unix in 1978.

The C shell offered command history, aliases, file name completion, and job control.

It turned out that while the C shell was easier to use than the Bourne shell, it failed miserably as a scripting language. It became common to use the C shell for everyday interactive computing and to use the Bourne shell for script programming.

The improved C shell, abbreviated `tcsh`, was created by Ken Greer by September 1975 and merged into the C shell in December 1983. Ken Greer based the shell on the TENEX operating system (hence, the “t” in `tcsh`). Mike Ellis, Paul Placeway, and Christos Zoulas made major contributions to `tcsh`.

The release of the Seventh Edition of Unix in 1978 led to the divergence of Unix on the System V (Bell Labs) and BSD (Berkeley) paths. System V was often called sys-five. System V was the for pay version and BSD was the free open source version.

The Korn shell, abbreviated `ksh`, was created by David Korn at AT&T's Bell Labs and announced at USENIX on July 14, 1983. Mike Veach and Pat Sullivan were also early contributors. The Korn shell added C shell features to the Bourne shell (command history and history substitution, command aliases, and file name completion). The Korn shell also added arrays and built-in integer arithmetic.

When the AT&T broke up in 1984 into “Baby Bells” (the regional companies operating local phone service) and the central company (which had the long distance business and Bell Labs), the U.S. government allowed them to start selling computers and computer software.

AT&T gave academia a specific deadline to stop using “encumbered code” (that is, any of AT&T's source code anywhere in their versions of Unix). This led to the development of free open source projects such as FreeBSD, NetBSD, and OpenBSD, as well as commercial operating systems based on the BSD code.

Meanwhile, AT&T developed its own version of Unix, called System V. Although AT&T eventually sold off Unix, this also spawned a group of commercial operating

systems known as Sys V Unixes.

Unix quickly swept through the commercial world, pushing aside almost all proprietary mainframe operating systems. Only IBM's MVS and DEC's OpenVMS survived the Unix onslaught.

Some of the famous official Unix versions include Solaris, HP-UX, Sequent, AIX, and Darwin. Darwin is the Unix kernel for Apple's OS X, AppleTV, and iOS (used in the iPhone, iPad, and iPod).

The BSD variant started at the University of California, Berkeley, and includes FreeBSD, NetBSD, OpenBSD, and DragonFly BSD.

The original Sun OS was based on BSD, but Solaris V5 was based on System V, release V.

Most modern versions of Unix combine ideas and elements from both Sys-V and BSD. HP-UX and Solaris are primarily System V, while AIX and Mac OS X are hybrids of both flavors of Unix.

Other Unix-like operating systems include MINIX and Linux.

In 1983, Richard Stallman founded the GNU project, which eventually provided the tools to go with Linux for a complete operating system.

In 1986, Maurice J. Bach of AT&T Bell Labs published *The Design of the UNIX Operating System*, which described the System V Release 2 kernel, as well as some new features from release 3 and BSD.

In 1987, Andrew S. Tanenbaum released MINIX, a simplified version of Unix intended for academic instruction.

`bash`, which stands for Bourne Again SHell, was created by Brian Fox for the Free Software Foundation and first released on June 7, 1989. `bash` combined features from the Bourne shell, the C shell, and the Korn shell. Bash also introduced name completion for variable names, usernames, host names, commands, and file names, as well as spelling correction for pathnames in the `cd` command, arrays of unlimited size, and integer arithmetic in any base between 2 and 64. `bash` is now the primary shell in Linux and was the primary shell for Mac OS X until Catalina in 2019 when Apple switched to `zsh` because of a change in the license for `bash`.

The Z shell, abbreviated `zsh`, was written by Paul Flastad in 1990 when he was a student at Princeton University.

The Linux operating system was first released on September 17, 1991, by Finnish student Linus Torvalds. With the permission of Andrew S. Tanenbaum, Linus

Torvalds started work with MINIX. There is no MINIX source code left in Linux. Linux Torvalds wrote Linux using the GNU C compiler running on MINIX on an Intel 80386 processor.

Linus Torvalds started work on open source Linux as a college student. After Mac OS X, Linux is the most widely used variation of Unix.

Linux is technically just the kernel (innermost part) of the operating system. The outer layers consist of GNU tools. GNU was started to guarantee a free and open version of Unix and all of the major tools required to run Unix.

In 1992 Unix System Laboratories sued Berkeley Software Design, Inc and the Regents of the University of California to try to stop the distribution of BSD Unix. The case was settled out of court in 1993 after the judge expressed doubt over the validity of USL's intellectual property.

See the [appendix](#) for a more detailed summary of the history of computers.

choice of shells

chapter 4

summary

This chapter looks at the shells available for Linux and Unix.

This includes an explanation of what a shell is and a list of the popular shells.

what is a shell?

Unix (and therefore also Mac OS X and Linux) has more than 200 basic commands (also called tools or utilities) that are distributed with the standard operating system. This collection and the ease with which they work together is the major source of the power of Unix. The vast majority of these standard tools are designed to be used from a command line (the shell).

A shell is primarily a command interpreter.

In a graphical user interface such as Macintosh or Windows, the user controls the computer and programs primarily through pointing and clicking, supplemented by some typing.

In a shell, all of the commands are typed. The shell figures out the meaning of what you typed and then has the computer do as instructed.

But the shell is much more than just a command interpreter. It is also a complete programming language.

Because the shell is a complete programming language, with sequences, decisions, loops, and functions, it can do things well beyond pointing and clicking. It can take control of your computer and react to changing circumstances.

Programming languages are used to make all of the computer programs and smart phone apps you've ever seen or used. Your imagination is the only limit on the power of the shell. Anything that can be done with a computer can be done with the shell.

The term *shell* is derived from the idea of concentric layers that occur in many seashells. One view is that programs can be run inside of the shell, including other copies of the shell. These layers can be arbitrarily deep. An inverse view is that the kernel is the inner most layer, with the shell wrapped around the kernel and application programs wrapped around the shell.

choice of shells

Most versions of Unix and Linux offer a choice of shells.

The term shell comes from a concept of Unix being a series of layers of software that work together rather than one single monolithic operating system program. The command line shell was part of the outer shell of a series of programs that eventually reach down to the kernel or innermost portion of the operating system.

Most shells are related to either the Bourne Shell or the C Shell.

Steve Bourne created the original Bourne shell called `sh`.

Some famous shells were C Shell (`csh`), Korn Shell (`ksh`), TENEX C Shell (`tcsh`), and the Z Shell (`zsh`). A shell that combined the major advantages of each of these early shells was the Bourne Again SHell (BASH).

The default shell in Linux and Windows Subsystem for Linux, as well as for a long time on MacOS X is normally BASH (Bourne Again SHell). The following instruction assumes the use of BASH.

It is possible to change the shell you are currently using (especially useful if you need to run a line or script from an alternative shell).

original shell

The original shell, called the Thompson shell and abbreviated `sh` was written by Ken Thompson at AT&T's Bell Labs, was very rudimentary. The Thompson shell was distributed with Versions 1 through 6 of Unix, from 1971 to 1975.

Note that the same `sh` is also used for other shells, including the Bourne shell.

The PWB shell or Mashey shell, abbreviated `sh`, was a variation of the Thompson shell that had been augmented by John Mashey and others at Bell Labs. The Mashey shell was distributed with the Programmer's Workbench Unix in 1976.

Bourne shell

Stephen Bourne created the Bourne shell, abbreviated `sh`, at AT&T's Bell Labs in New Jersey as a scripting language.

The Bourne shell was released in 1977 as the default shell in the Version 7 Unix release distributed to colleges and universities. It gained popularity with the publication of *The UNIX Programming Environment* by Brian W. Kernighan and Rob Pike. The book was the first commercially published tutorial on shell programming.

The Bourne shell (or a shell that is compatible and will run Bourne shell scripts) is usually located at `/bin/sh`.

You will also see references to the Bourne shell as `bash`.

The Bourne shell has a command language based on the **ALGOL programming language**, including process control, variables, regular expressions, flow control (decisions and loops), powerful input and output control, and functions.

Despite its power, the original Bourne shell was difficult to use and lacked file

name completion, command history, aliases, and had difficulty running multiple background jobs.

C shell

The C shell, abbreviated `csh`, was created by Bill Joy, a graduate student at the University of California, Berkeley. With additional work by Michael Ubell, Eric Allman, Mike O'Brien, and Jim Kulp, it was released in the 2BSD release of BSD Unix in 1978.

The C shell was based on the style of the C programming language.

The C shell was much easier to use than the Bourne shell, but was unable to perform anything other than the most simple scripts.

The C shell lacked functions, had weak input and output control, and had limited programming ability due to a poorly written command interpreter (Bill Joy explained that at the time he didn't know about many standard compiler techniques).

The power of the C shell for everyday interactive use was due to its introduction of command history, aliases, file name completion, and job control.

It became common to use the C shell for everyday interactive computing and to use the Bourne shell for script programming.

The improved C shell or TENEX C shell, abbreviated `tcsh`, was created by Ken Greer by September 1975 and merged into the C shell in December 1983. Ken Greer based the shell on the TENEX operating system (hence, the "t" in `tcsh`). Mike Ellis, Paul Placeway, and Christos Zoulas made major contributions to `tcsh`.

The Hamilton C Shell was written in 1988 by Nicole Hamilton of Hamilton Laboratories for the OS/2 operating system. In 1992, the Hamilton C Shell was released for Windows NT. The OS/2 version was discontinued in 2003. The Windows version, with adaptations for Windows peculiarities, is still in use.

Korn shell

The Korn shell, abbreviated `ksh`, was created by David Korn at AT&T's Bell Labs and announced at USENIX on July 14, 1983. Mike Veach and Pat Sullivan were also early contributors.

After years of Unix users having to learn two different shells, one for scripting and one for interactive control, David Korn built the Korn shell by adding C shell features to the Bourne shell.

In addition to adding command history, history substitution, aliases, and file name completion from the C shell, the Korn shell also included arrays and built-in integer arithmetic.

The three major versions of the Korn shell are the official version `ksh`, the public domain version `pdksh`, and the desktop version `dtksh`.

CDE shipped with the Desktop version of the Korn shell.

The POSIX shell is a variant of the Korn Shell. HP shipped the POSIX shell with HP-UX 11.0.

BASH shell

`bash`, which stands for Bourne Again SHell, was created by Brian Fox for the Free Software Foundation and first released on June 7, 1989.

`bash` combined features from the Bourne shell, the C shell (both the original C shell and `tcsh`), and the Korn shell, while using the syntax of the original Bourne shell, allowing it to run almost all historical Bourne shell scripts. `bash` is now the primary shell in both Linux and Mac OS X.

`bash` introduced name completion for variable names, usernames, host names, and commands (in addition to file names), spelling correction for pathnames in the `cd` command, arrays of unlimited size, and integer arithmetic in any base from 2 to 64.

Z shell

The Z shell, abbreviated `zsh`, was written by Paul Flastad in 1990 when he was a student at Princeton University.

The Z shell combines features of the Bourne Shell, the C shell, and `bash`.

other shells

The POSIX shell, abbreviated `sh`, (POSIX = Portable System Interface) is based on the Korn shell and is the official IEEE P1003.2 shell. It is the `/bin/sh` shell on some systems.

The Almquist shell, abbreviated `ash`, was written by Keneth Almquist as a replacement for the Bourne shell written for BSD systems. The `sh` in FreeBSD and NetBSD were based on the Almquist shell.

The Debian Almquist shell, abbreviated `dash`, is a modern replacement for the Almquist shell in Debian and Ubuntu Linux. While the default shell in both Debian

and Ubuntu Linux are `bash`, `/bin/sh` is a symlink to `ash`.

`ash` and `dash` are minimalist shells that interpret scripts and are not intended for interactive use. Their small size and fast execution time make them good for embedded systems. Because many scripts call for the use of `/bin/sh`, Debian and Ubuntu Unix gain speed of execution for scripts, while still allowing `bash` as the primary interactive shell.

The Public domain Korn shell, abbreviated `pdksh`, is based on the Korn shell.

The MirBSD Korn shell, abbreviated `mksh`, is based on the OpenBSD version of the Korn shell and the `pdksh` and was released as part of MirOS BSD.

Busybox is a set of tiny utilities, including a version of `ash`, used in embedded systems.

`rc`, written by Tom Duff, was the default shell for AT&T's Bell Labs' Plan 9 and Version 10 Unix. Plan 9 was an improved operating system based on Unix, but was not a significant enough improvement to overtake its predecessor. `rc` is available on some modern versions of Unix and Unix-like operating systems.

`es` is an `rc`-compatible shell written in the mid-1990s for functional programming.

Perl shell, abbreviated `psh`, is a shell that combines `bash` and the `Perl` scripting language. it is available for Unix-like and Windows operating systems.

Friendly interactive shell, abbreviated `fish`, was released in 2005.

`pysh` is a profile in the IPython project that combines a Unix-style shell with a Python scripting language shell.

`wish` is a windowing shell for Tcl.Tk.

Which Shell to Use

from [Google Shell Style Guide](#)

`Bash` is the only shell scripting language permitted for executables.

Executables must start with `#!/bin/bash` and a minimum number of flags. Use `set` to set shell options so that calling your script as `bash <script_name>` does not break its functionality.

Restricting all executable shell scripts to **bash** gives us a consistent shell language that's installed on all our machines.

The only exception to this is where you're forced to by whatever

you're coding for. One example of this is Solaris SVR4 packages which require plain Bourne shell for any scripts.

connecting to a shell

chapter 5

summary

This chapter looks at how to connect to a shell.

On your local desktop or laptop computer, many of these steps won't apply, but you will probably need most or all of the steps when logging in remotely to control a server.

If you are connecting to a remote computer (such as web server), then you can use `telnet` or `SSH`.

If you connecting to the shell from a modern graphic user interface, then you need to start up a terminal emulator.

If you connecting to a mainframe computer, minicomputer, or the equivalent, you use any terminal connected to the system.

NOTE: On a single-user Linux or Mac OS X desktop/laptop computer, you can start the Terminal program and be automatically signed in (no need for account login or password). On a remote server, you will always need to login in with at least account name and password.

physical terminal

For old style systems where Unix runs on a mainframe or minicomputer, there will

be actual physical terminals that are connected by wires or MODEM to the mainframe or minicomputer. These systems are increasingly rare.

The terminal may already be at the `login` prompt. If not, try pressing the RETURN key several times until the `login` prompt shows up.

Telnet and SSH

`telnet` or `SSH` are the two basic methods for connecting to a remote server.

`telnet` was the original method. There are `telnet` client programs available for most computer systems. Unfortunately, `telnet` performs all communications in plain text, including passwords, which means that anyone malicious along the path between you and your server can easily read the information needed to hack into your system using your account. For this reason, many servers no longer allow `telnet` access.

`SSH` is Secure Shell. It has the same basic capabilities as the older `telnet`, but includes security, including encrypted communications. There are `SSH` client programs for most modern computer systems.

You can also use `SSH` through a terminal emulator, which is how many system administrators now access their servers from their personal or portable computer.

terminal emulator

As mentioned in the [history](#) chapter, the UNIX shells were accessed through interactive terminals, originally teletype machines and later special combinations of keyboards and cathode ray tubes (CRTs).

There are programs for graphic user interfaces that allow you to interact with a shell as if you were using one of those ancient terminal devices. These are called terminal emulators (they emulate the signals of a terminal).

Some common terminal emulators include `eterm`, `gnome-terminal`, `konsole`, `kvt`, `nxterm`, `rxvt`, `terminal`, and `xterm`.

Note that if you are logging in to a web server or other remote computer, you should use an `SSH` (Secure SHell) client program instead of a terminal emulator. A terminal emulator program is for gaining shell access to a personal computer or workstation. With a little bit more knowledge, you can use the shell on a personal computer or workstation as your `SSH` client.

special settings

If you are starting up Terminal from a modern operating system, you will almost

always be able to start using the shell without any login name or password.

If you are logging in to a remote server you may need a few pieces of additional information beyond just your login name and password.

Terminfo: You may need to know the Terminfo name for your terminal. The Terminfo name is used to set the characteristics of your terminal. A common default is the old DEC VT-100 terminal. On old (early) versions of UNIX you may have to use a Termcap name instead of a Terminfo name.

End of line: On most modern systems, the RETURN key will indicate the end of line. On some older systems you may find a RET, NEWLINE, ENTER< or other key that serves this purpose. On some systems, that have both a RETURN and an ENTER key, both will serve the same purpose.

Erase key: On most modern systems, the DELETE key will erase one character at a time. Typically the CONTROL-H combination (hold down both the H key and the CONTROL key, sometimes marked CNTRL or CTRL) will also work as an erase key. On some older systems, the # key will also serve as the erase key.

Line kill key: On some older systems the @ key deletes the entire line being entered.

Interrupt key: There is typically a key that will interrupt the execution of running programs.

You can find out these items from the tech support for your web hosting, from the system administrator of a system, or from the manual for your system.

shell basics

chapter 6

summary

This chapter looks at Unix (and Linux) shell basics.

This includes an explanation of what a shell is, how to get to your shell, and a simple example of how to use your shell.

The short version of this chapter is to start up your terminal emulator (or SSH client), type in your account name at the `login` prompt, followed by your password at the `password` prompt (using the RETURN or ENTER button at the end of each line). Then type a valid command (such as `who`) and an invalid command (such as `asdf`) and see the results. The rest of the commentary helps you through common questions and problems.

guide conventions

The following conventions are used in this guide.

Examples are displayed in a gray box.

Additionally, anything that will appear on the screen (whether you type it or the shell produces it as output) will appear in a monospace type. This will help identify the examples in the PDF version. This also applies to material contained in ordinary descriptive paragraphs that you will type.

```
$ date
Wed Nov 10 18:08:33 PST 2010
$
```

Bold face type is used to indicate items that you type.

There will be no indication of the correct locations to type RETURN or ENTER or

other similar special characters. These normally happen at the end of every input line. There will be reminders in the descriptive text near the beginning of the book, as well as in other descriptive text where there is a need for a special reminder or an unusual convention or an unusual keystroke.

```
$ date
```

Bold italics type is used to indicate items that you must customize, such as file names or user account name. In a descriptive paragraph, these items will be in *ordinary italics*.

```
$ AccountName
```

Material that the shell will output will be in ordinary `monospace` type. In some cases where the material will be variable, the shell output will be in *italics*.

root or superuser

Do **not** run your terminal emulator or shell in root or superuser.

Root or superuser has complete control over the entire computer. A regular user account has limitations.

Experienced programmers run BASH as a regular user to protect themselves from destructive mistakes — and they are already skilled at using BASH.

A beginner running BASH as superuser or root can turn a simple typing mistake into a disaster.

If you already have a regular user account created, make sure you use it. If you only have the superuser or root account running, immediately create a regular user account and switch to it for all of your learning exercises.

Both the Bourne style shells (including BASH) and the C style shells display a # prompt when you are running the shell as root. Be careful.

starting your shell

NOTE: On a single-user Linux or Mac OS X desktop/laptop computer, you can start the Terminal program and be automatically signed in (no need for account login or password). On a remote server, you will always need to login in with at least account name and password.

Some information you may need includes the name or URL of your server or computer (sometimes called the host), your account name, and your assigned password. If you are working on a remote server (such as a web server), you need to get this information from your hosting company or system administrator. If you are using a large multi-user system, you need to get this information from your system administrator. If you are using a personal computer or workstation, you probably set these for yourself.

If you have just purchased a new personal computer or workstation, ask your salesperson for the defaults or look them up in the manual. Your install CD or DVD is likely to have a utility that can be used to create accounts and set passwords. The Mac OS X install DVD has utilities for both purposes.

If you are the first person to work with a large system or computer, refer to the manuals that came with your computer. You will find information on the root/superuser account. That is a powerful account and should be reserved for special occasions when that kind of power is needed. Look in the manual section with a title similar to “Getting Started” and then look for an account named *user*, *guest*, *tutor*, or similar name that suggests an ordinary user account.

You login remotely into a web server through SSH (Secure SHell). There are many SSH programs available. You do not have to have a matching operating system. You can use an SSH client program on Windows, Macintosh, Linux, or almost any other operating system to sign into a Linux or UNIX server.

You login into a large multi-user traditional command line UNIX system by typing your user name, ENTER, your password, and ENTER (in that order). This will enter you into the default shell set up for your account.

On a computer that runs a graphic interface (such as Gnome, KDE, and Mac OS X) you will want to use a terminal emulator program. Typically a terminal emulator program starts with you already logged-in to the same account that you have running in the graphic user interface.

On Mac OS X and most versions of Linux, the icon for the Terminal program will look like this:

On a Mac OS X computer, Terminal will be located in the Utilities directory, which is located in the Applications directory. When you find it, you can drag it onto the Dock to make it easily accessible. Apple purposely hid the UNIX command line to avoid confusing the typical consumer.

On Linux/KDE, look for Konsole or Terminal in the Utilities menu.

On Linux/Gnome, look for color xterm, regular xterm, or gnome-terminal in the Utilities menu.

On Ubuntu Linux, look in Applications menu > Accessories > Terminal. Single click and hold, then drag to your panel, because you will be using it a lot.

On some versions of Linux, you can press the CONTROL and the ALT and the F1 keys all at once to bring up Terminal.

In Gnome, use the Applications menu > Accessories > Terminal or the keyboard shortcut of CONTROL and ALT and T (all at the same time).

In KDE, use the KMenu > System > Terminal Program (Konsole).

In Linux Mint you can use the keyboard shortcut of holding down the CONTROL and ALT and T keys all at once.

As a last resort, you can use the file search feature in Linux or Mac OS X and search for “Terminal”.

You may want to try out the various terminal emulators and decide which works best for you (each offer slightly different features).

login and password

NOTE: On a single-user Linux or Mac OS X desktop/laptop computer, you can start the Terminal program and be automatically signed in (no need for account login or password). On a remote server, you will always need to login in with at least account name and password.

At the `login` prompt type your account name (in lower case letters) followed by ENTER or RETURN.

```
login: accountname
Password:
```

At the `password` prompt type your password followed by ENTER or RETURN.

```
Password: password
$
```

If you encounter problems, see the [next chapter](#) for help.

prompt

Once the shell is running it will present a shell prompt. This shell prompt is normally the U.S. dollar sign (\$). Other common prompts are the percent sign (%) and the pound sign (#). The shell prompt lets you know that the shell is ready and waiting for your input.

```
$
```

The most common prompt in the Bourne shell (`sh` or `bsh`) and Bourne Again shell (`bash`) and Korn shell (`ksh`) is the U.S. dollar sign (\$).

```
$
```

When the the Bourne Again shell (`bash`) or Korn shell (`ksh`) is running as root or superuser, the prompt is changed to the U.S. number or pound sign (#) as a clear reminder that you are using a much more powerful account.

```
#
```

The Bourne Again shell (`bash`) shell typically reports the current working directory and user name before the \$ prompt, often inside of square braces. An example:

```
[admin:~ admin]$
```

The most common prompt in the C shell (`csh`) and TENEX C shell (`tsch`) is the percent sign (%).

```
%
```

When running as root or superuser, the C shell (`csh`) shows the U.S. number or pound sign sign (#).

```
#
```

The Z shell (`zsh`) shows the short machine name followed by the percent sign (%).

```
mac%
```

When running as root or superuser, the Z shell (`zsh`) shows the short machine name followed by the U.S. number or pound sign sign (`#`).

```
mac#
```

Almost all of the shell examples in this book will use **bold face** to show what you type and plain fixed space characters to show shell output. Items that you need to modify according to your local needs are normally going to be presented in *italics*.

You are likely to see information before the actual command prompt. It may be the current working directory. It may be the current user name. There are ways to change what is presented. For now, don't worry about it, just be aware that you are likely to see some text before the prompt.

example command

You can run a UNIX (or Linux or Mac OS X) command (also called a tool) by typing its name and then the ENTER or RETURN key.

The following example uses the **date** command or tool.

```
$ date  
Wed Nov 10 18:08:33 PST 2010  
$
```

The format is: day of the week, month, day of the month, 24 hour time, time zone, year.

failed command

BASH will let you know when you have typed something it doesn't understand.

Type “asdf” and then the ENTER or RETURN key. You should see a message similar to the following:

```
$ asdf  
-bash: asdf: command not found  
$
```

no news is good news

BASH follows the rule that no news is good news. If a command runs successfully,

it won't generate any output message.

As an example, when you use the `cp` command to copy a file, there will be no special notice on success. You will just be returned to the command prompt (`$`), ready for the next command.

login/logout

chapter 7

sumamry

This chapter looks at `login` and `logout`, a pair of UNIX (and Linux) commands.

On a personal computer or workstation you probably don't need to `login`. You can just start your terminal emulator (see [previous chapter](#)).

On a multi-user UNIX or Linux system, such as a web server, you will need to `login`. This chapter furthers the discussion `login` in more detail than the [previous chapter](#)'s introduction, including special cases and solutions to common problems.

In particular, this chapter discusses choosing the system and terminal type, rare options that you might encounter.

This chapter also discusses the `logout` command and the importance of always logging out from a running system.

NOTE: On a single-user Linux or Mac OS X desktop/laptop computer, you can start the Terminal program and be automatically signed in (no need for account login or password). On a remote server, you will always need to login in with at least account name and password.

always need to login in with at least account name and password.

login

`login` is a UNIX command for logging into a UNIX system.

`login` is a builtin command in `csh`. There is also an external utility with the same name and functionality.

In many modern systems, the functionality of `login` is hidden from the user. The `login` command runs automatically upon connection. In some old computers you may

need to type a special character or even type `login` to bring up the login program.

If you login remotely to a server you will be prompted for your user/account name and password. If you start up a terminal emulator and shell from a graphic user interface you will probably already be authenticated and immediately go to the shell (although some of the startup activity of login will still be done for you).

The activities that login performs at startup of a shell will be covered in a later chapter, because you need more familiarity with the shell before you can understand that material.

Starting a shell is covered in the previous chapter about [shell basics](#).

select system or host

If you are signing into a system that combines multiple computers, you will first need to indicate which computer you are logging into.

You may already be logged in if you are using a terminal emulator on a personal computer or workstation. If so, you don't need this step.

You will see a prompt indicating a choice of computer, such as (only one of these will appear):

```
host:
pad:
request:
system:
```

You will see only one of these (or similar) choices.

If you see `login:` instead, then you don't have to worry about choosing the system.

Enter the identifying name of the computer system you were assigned to use, followed by the ENTER or RETURN key. Your system administrator can provide you with this information.

On some networked systems you can abbreviate with the first two or three characters of the computer name (as long as it is enough to uniquely identify which computer is intended).

If you are successful, you will be presented with the `login:` prompt.

account name

You may already be logged in if you are using a terminal emulator on a personal computer or workstation. If so, you don't need this step.

Ask your system administrator for your account name. If this is your own personal system, then use the account name set up during installation. Many modern install disks include a utility for creating a new account.

At the `login:` prompt, enter your account name, followed by the ENTER or RETURN key.

Type your account name in lower case letters. UNIX assumes that an account name in ALL CAPITAL LETTERS indicates an old input/out device that doesn't support lower case letters (such as an old style teletype, or TTY). Also, if you use upper case letters for the login, then you can not use lower case letters in the password.

If you enter a valid account name, you will be asked for your password. On many computers, you will be asked for a password even if you enter an incorrect account name. This is a security measure to help prevent guessing account names.

```
login: accountname
Password:
```

password

You may already be logged in if you are using a terminal emulator on a personal computer or workstation. If so, you don't need this step.

Ask your system administrator for your password. If this is your own personal system, then use the password set up during installation. Many modern install disks include a utility for changing the password for an existing account or for creating a new account with a new password.

At the `Password:` prompt, enter your password, followed by the ENTER or RETURN key.

```
Password: password
$
```

In some cases, a new account doesn't have a password. Also, it is common for Mac OS X to have no password for the user account.

If your account doesn't have a password, just press the ENTER or RETURN key.

Change your password to a secure password at your earliest opportunity. If you

don't know how to do this yet, the upcoming chapter on [passwd](#) (yes, that is the correct spelling) will tell you how. That same chapter gives advice on how to select a secure password.

Failure will be indicated by an error message. The exact error message varies by system, but will probably be something similar to:

```
Login incorrect
```

The most likely reasons are:

1. Incorrect account name.
2. Incorrect password.
3. You typed the account name in upper case letters (check the CAPS LOCK key).

You should have a new login prompt and can easily start over.

If you logged in in upper case, the shell will display in upper case letters and expect you to type only in upper case letters.

If you accidentally typed the account name in upper case letters, but haven't yet typed in the password, many UNIX systems will display a backslash character in front of the password prompt.

If you realize you made a mistake on the account name and want to start over, hold down the CONTROL key (often marked CTRL) and the D key at the same time. This will stop the login program and start over again from the beginning.

Note that at one time there was a security hole because of the Control-D. A hacker would start the login, type Control-D, and then try to slip in a command to the shell before a new login program could be started. This security hole no longer exists on shell login, but this same type of timing attack is still used for other security holes.

terminal type

On some older UNIX systems you may be asked to provide the terminal type you are using. Some modern terminal emulator programs offer the choice of emulating various different terminals from the early UNIX era. These different terminal types had different specialized capabilities.

Because the early traditional UNIX was created primarily on Digital Equipment Corporation (DEC) computers (first the PDP, followed by the VAX), the default terminal device was the DEC VT100. Most modern terminal emulator programs act

like the VT100.

On older UNIX systems you may see the terminal type prompt:

```
Term:
```

In some cases, the prompt may give the default terminal setting in parenthesis.

```
Term = (VT100)
```

If the default terminal setting is correct, simply press the RETURN or ENTER key.

Otherwise, type in the correct terminal type, followed by the ENTER or RETURN key.

If you are uncertain, try the `vt100` or `UNKNOWN`, followed by ENTER or RETURN.

Some common terminal types:

- `h19`
- `tvi925`
- `vt100`
- `wyse50`

After you are logged in, you can set the terminal type (capitalization matters).

Shell	Command
<code>csh</code> or <code>tcsh</code>	<code>setenv TERM vt100</code>
<code>sh</code>	<code>TERM=vt100; export TERM</code>
<code>ksh</code> , <code>bash</code> , or <code>zsh</code>	<code>export TERM=vt100</code>
VMS	<code>set term/device=vt100</code>

If you do not know your shell type, use the following command (followed by ENTER or RETURN):

```
$ echo $SHELL
```

You will need to enter the appropriate command each time you login.

Alternatively, you can add the appropriate command line to the initialization file in your home directory.

Shell	Login file
csh	.cshrc or .login
tcsh	.cshrc
ksh	.profile .kshrc
zsh	.zshrc
bash	.bash_profile
remote shell	.rhosts

VMS users need to modify the login.com file, adding the line `$set term/device=vt100 .`

logout

When you finish using the shell, type the `exit` or `logout` command. This will either display a new login prompt or close the terminal emulator window. If you are logged in remotely to a server, this will break your connection. If you are logged in physically on a large UNIX system, this will prevent someone else from abusing your account.

When you finish using the shell, type the `exit` or `logout` command. This will either display a new login prompt or close the terminal emulator window. If you are logged in remotely to a server, this will break your connection. If you are logged in physically on a large UNIX system, this will prevent someone else from abusing your account.

Some of the possible variations of this command include: `bye`, `exit`, `lo`, `logout`, and `quit`.

Typing `Ctrl-L-D` (holding down the `CONTROL` key and the `D` key at the same time) will also log you out of most shells. The `Ctrl-D` tells the shell it has reached the end-of-file (EOF). Because the shell is a filter and filters terminate when EOF is reached, the shell terminates and you log off the system or return to the parent process.

While it might not be a big deal to skip this step on a single user computer that you never leave unattended, forgetting to logout from a remote server is a serious security hole. If you leave your computer or terminal unattended, someone else can sit down and gain access to all of your files, including the ability to read, modify, or delete them. The imposter can send spam emails from your user ID. The imposter can even use your computer or account to attempt to hack or damage or break into any system in the world from your user ID. If this occurs from a school or business account, you will be responsible for any damage done.

Most modern systems accept either `logout` or `exit`.

On Mac OS X, typing `logout` produces the following result:

```
$ logout  
[Process completed]
```

On Mac OS X, typing `exit` produces the following result (notice that the shell automatically runs `logout` for you):

```
$ exit  
logout  
[Process completed]
```

A successful `logout` will stop all running foreground or background processes. There is a way to keep processes running, which is useful for things like starting up your Apache web server and MySQL data base, but the method will be discussed later.

```
$ logout  
There are suspended jobs.
```

If you see the message “There are stopped jobs.” it means that you have one or more suspended jobs. The shell is letting you know in case you forgot about them. If you type `logout` again without running the `jobs` in between, the system will go ahead and log you out and terminate all suspended jobs.

`logout` is a builtin command in `csh`.

exit

`exit` is a built-in shell command (for the shells that support it), while `logout` is a program. In the `csh` (C Shell), `logout` is an internal built-in command. `sh` (the

original Bourne shell) and ksh (the Korn Shell) do not officially have the `logout` command, but many modern versions support it.

`exit` can be used by itself as a substitute for `logout` (as mentioned above).

`exit` can also be used to send a return value (often an error code) to the parent process. Simply add an integer following `exit`. This is particularly useful in scripting.

```
$ exit n
```

passwd

chapter 8

summary

This chapter looks at `passwd`, a Unix (and Linux) command.

`passwd` is used to change your password.

This chapter also includes the list of the 100 worst (most commonly used) passwords.

As mentioned in the [previous schapter](#), you should change your password from the original default or assigned password to a secure password that nobody else knows. And please don't leave the new password on a sticky note attached to your computer.

syntax:

```
passwd [options...] [user]
```

shells:	ash	bash	bsh	csH	ksh	sh	tcsh	zsh
File Name:	passwd		Directory:	/usr/bin/			Type:	External

setting your password

Type `passwd` followed by the ENTER or RETURN key.

```
$ passwd
```

You will be prompted to give your current (old) password (to make sure it is really

you) and then prompted to enter your new password twice. For security purposes, the password is typically replaced with asterisks or some other character so that nobody can read your password over your shoulder. To make sure that you have typed what you thought you typed you are asked to type the new password twice. The two copies must match before your new password replaces your old password.

local password

The password set by `passwd` is your *local* password. On a single user system, this is probably your only password.

On Mac OS X the use of the `passwd` may or may not be sufficient to change your password for the entire system. This depends on which version of Mac OS X you are using. It is best to change your password using the install disc. If you do not have a copy of the install disc, there are instructions on the internet on how to manually change the password.

On a large system, there may be multiple passwords spread across multiple computers. The `passwd` command will only change the password on the one server that you are currently logged into (normally through SSH). You may need to use `yppasswd` or a web interface to change your password for the entire system.

You can check for your account or username in `/etc/passwd`. If it's not listed there, then don't use the `passwd`. Check with your system administrator.

periodic changes

Whenever you first login into a new system, the first thing you should do is change your password. In particular, immediately change the initial root password for a new system. Leaving the initial default password is a huge security hole and hackers do try all of the standard default passwords to see if they can find an easy way into a computer. Even with a user account, it is common for initial passwords to be generated poorly and be easy for hackers to guess.

Additionally, you want to change your password on a regular basis. It only takes a few months to figure out a password through brute force attacks. Some systems require that you change your password on a regular basis. Once a month is a good time period. More often if you suspect that someone saw you typing or there is any other possibility that your password might have been compromised.

You can set up your account to remind you to change your password on a regular basis. If you are the system administrator, you can set up these reminders for everyone (and should do so). As system administrator you can even require that users change their passwords on a regular basis (or they become locked out and have to come to you to beg for re-entry). As system administrator you can also set up a system that requires

(or even suggests) secure passwords.

Approximately 4.7% of all users have a password of *password*. 8.5% have one of the top two passwords. 9.8% (nearly one tenth) have one of the three top passwords. 14% have one of the top 10 passwords. 40% have one of the top 100 passwords. 79% have one of the top 500 passwords. 91% have one of the top 1,000 passwords.

secure passwords

It is important to have secure passwords.

The more characters, the more secure. A minimum of six or eight characters is barely adequate.

A strong mixture of characters for a password includes at least one capital letter, at least one lower case letter, at least one digit, and at least one punctuation character. You should avoid repeating any character more than once in the same password. The special character (such as !@#\$%^&*;,;) should not be the first or last character in the password.

Avoid using any word that occurs in your own or any other natural language. Hackers use a **dictionary attack** that tries words from the dictionary. Also avoid spelling words backwards, using common misspellings, or using abbreviations. Avoid using dates that are important to you (someone can easily look up your birthday or

anniversary on the world wide web). Avoid using names of family, friends, or even pets.

secure technique

A technique that generates decent passwords is to use a key phrase and then use the first letter of each word in the keyword. Sprinkle in digits and special characters (punctuation) and make some of the letters upper case and some lower case.

Never use the same password for more than one purpose. People have the tendency to reuse the same password over and over. If a hacker gets your password from one system, the hacker will see if it also works on your bank account and other systems.

superuser

The super user (root) can use the `passwd` command to reset any other user's password. There is no prompt for the current (old) password.

```
$ passwd username
```

The super user (root) can also remove a password for a specific user with the `-d` option. The disable option then allows the specified user to login without a password. This applies to Linux and Solaris only.

```
$ passwd -d username
```

command structure

chapter 9

summary

This chapter looks at simple Unix/Linux commands to get you started with using the shell.

You will learn the basic format or structure of a shell command.

You can run a UNIX (or Linux or Mac OS X) command (also called a tool) by typing its name and then the ENTER or RETURN key.

All commands (and file names) are **case sensitive**. `ls` is a valid command, while `LS` is unrecognized.

commands and utilities

A quick note on the difference between commands and utilities.

A **utility** is a program. `who`, `date`, and `ls` are examples of utility programs.

A **command** is all of the text typed at the command line, the utility name and all of the flags, switches, file names, and other text.

This subtle distinction between utilities and commands is generally ignored and the two terms are often used interchangeably. As I type this, I am pretty sure that I have ignored this distinction elsewhere in this book and dread double-checking every use.

You can probably use the terms interchangeably except in cases like tests, papers, or books.

The kernel is loaded from hard drive (or other storage) when the computer is started and remains running until the computer is turned-off or crashes.

Utilities are also stored on hard drives, but are only loaded into main memory when used.

single command

The most simple form of a UNIX command is just a single command by itself. Many UNIX/Linux commands will do useful work with just the command by itself. The next examples show two commands (`who` and `date`) by themselves.

The output generated by a single command by itself is called the default behavior of that command.

who

The `who` command will tell you all of the users who are currently logged into a computer. This is not particularly informative on a personal computer where you are the only person using the computer, but it can be useful on a server or a large computing system.

Type `who` followed by the ENTER or RETURN key.

```
$ who
admin      console Aug 24 18:47
admin      ttys000  Aug 24 20:09
$
```

The format is the login name of the user, followed by the user's terminal port, followed by the month, day, and time of login.

failed command

The shell will let you know when you have typed something it doesn't understand.

Type "`asdf`" and then the ENTER or RETURN key. You should see a message similar to the following:

```
$ asdf
-bash: asdf: command not found
$
```

date

The following example uses the **date** command or tool.

```
$ date
Wed Nov 10 18:08:33 PST 2010
$
```

The format is: day of the week, month, day of the month, 24 hour time, time zone, year.

options, switches, or flags

A command may optionally be followed by one or more options. The options are also commonly called flags or switches.

Options are usually a single character. Usually the option is preceded by a minus sign or hyphen character.

See the following example.

universal time

Adding the `-u` flag to the command `date` will cause it to report the time and date in UTC (Coordinated Universal) time (also known as Zulu Time and formerly known as Greenwich Mean Time or GMT). The seconds are slightly higher in the second example because of the passage of time.

```
$ date
Sat Aug 25 19:09:19 PDT 2012
$
$ date -u
Sun Aug 26 02:09:27 UTC 2012
$
```

option grouping

You can combine multiple options for a single command.

The following example shows the `ls` command by itself and with two options, first individually, and then combined.

```
$ date
```

```
Sat Aug 25 19:09:19 PDT 2012
$
$ date -u
Sun Aug 26 02:09:27 UTC 2012
$
```

option grouping

You can combine multiple options for a single command.

The following example shows the `ls` command by itself and with two options, first individually, and then combined.

```
$ ls
Desktop      Downloads    Movies      Pictures    scripts
Documents    Library      Music       Public

$ ls -F
Desktop/     Downloads/   Movies/     Pictures/   scripts/
Documents/   Library/     Music/      Public/

$ ls -a
.             .cups        Library      scripts
..            .vminfo      Movies
.DS_Store    Desktop      Music
.Trash        Documents    Pictures
-bash_history Downloads     Public

$ ls -a -F
./            .cups/       Library/     scripts
../           .vminfo      Movies/
.DS_Store     Desktop/     Music/
.Trash/       Documents/   Pictures/
-bash_history Downloads/    Public/
$
```

You can group option by listing them in any order (with a few rare exceptions) and either with their own minus sign or after a single minus sign. All of the following versions of the `ls` command work the same way:

```
$ ls -a -F
$ ls -F -a
$ ls -aF
$ ls -Fa
$
```

arguments

Commands may also optionally have arguments. The most common arguments are the names of files.

Technically, the options just mentioned are also arguments, but in common practice options are separated from other arguments in discussions. Also, technically, the operators mentioned below are also arguments, but again it is useful to separate operators from other arguments in discussions.

The following shows the difference between the default behavior (no arguments) of `who` and a version with arguments `who am i`.

The default behavior of `who` lists all users on the computer.

```
$ who
admin    console Aug 24 18:47
admin    ttys000 Aug 24 20:09
$
```

The use of the arguments with `who am i` causes the command to only lists the one user who typed the command.

The command is `who` and the arguments are `am i`.

```
$ who am i
admin    ttys000 Aug 25 17:30
$
```

one argument

In an [upcoming chapter on `cat`](#) you will use the command `cat` with the file name `file01.txt` to confirm that you correctly entered your sample file.

just observe this example
do *not* type this into your shell

```

two arguments

In the [upcoming chapter on cat](#) you will use the command `cat` with two file names (`file01.txt` and `numberfile.txt`) to confirm that you correctly entered two of your sample files.

just observe this example
do *not* type this into your shell

```
$ cat file01.txt numberfile.txt
This is a line of text in my first file.
This is another line.

options and arguments

You can combine options and arguments on the same command line.

The following example uses the command `cat` with the `-b` option and the file name `file01.txt`.

just observe this example
do *not* type this into your shell

```
$ cat -b file01.txt
 1 This is a line of text in my first
file.
 2 This is another line.

operators and special characters

Command lines may include optional operators or other special characters.

In an [upcoming chapter on cat](#) you will use the command `cat` with the operator `>` and the file name `file01.txt` to enter your sample file.

just observe this example
do *not* type this into your shell

```
$ cat > file01
```

If you accidentally typed in the above command, hold down the CONTROL key and the D key at the same time to return to your shell.

quick tour of shell commands

chapter 10

summary

This chapter gives you a quick tour of shell commands.

You should do each of the exercises and observe what happens.

Do not worry about trying to learn how each of the commands works.

The goal here is to give you a basic idea of how a shell works and the kinds of things that the most common shell commands and operations do.

This quick tour will give you a background to understand the upcoming chapters and their lessons. If you have the need to use anything you observe in this quick tour, you can always jump ahead to the appropriate chapter and learn the details.

failure

Type `asdf` (a non-existent command) into the terminal. Remember to press the

ENTER or RETURN key after this command.

```
$ asdf
-bash: asdf: command not found
$
```

This shows you what it look like when the shell reports mistakes. Note that you will not always see any reports of a particular error. Commands that have no output will just return silently to the prompt.

echo text

Use the `echo` command to send text to the terminal. Remember to press the ENTER or RETURN key after each command. Note that this will be particularly useful in your future UNIX/Linux scripts to report information back from your scripts.

```
$ echo hello world
hello world
$
```

echo text with variable information

Use the `echo` command with an environment variable. it should use your account name.

```
$ echo hello $USER
hello admin
$
```

list director contents

Use the `ls` command to list the contents of the current directory. (Note that your results will be different.)

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures
Library      Public
$
```

create a text file

Use the `cat` command to create a small text file.

Type the command line, followed by RETURN or ENTER, then type each of the six suggested lines, each followed by the RETURN KEY. After having entered each line, make sure you are at the beginning of a new (blank or empty) line and type Ctrl-D (hold down the CONTROL key and the D key at the same time).

```
$ cat > names
James
Mary
John
Patricia
Robert
Linda
CONTROL-D
$
```

The choice of names is based on the most popular names in the United States in the year before this chapter was written. Bribe me if you want your name put into the example.

check the file was created

Use `ls` to make sure the file was created properly. It should be added to your directory listing.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library      Public
$
```

display file contents

Use the `cat` command to show the contents of your new file.

```
$ cat names
James
Mary
John
Patricia
Robert
Linda
$
```

count the number of words

Use the `wc` command to count the number of words in your new file.

```
$ wc names
      6      6     38 names
$
```

The format is the number of lines (6), followed by the number of words (6), followed by the number of characters (38), followed by the name of the file (`names`).

copy a file

Use the `cp` command to make a copy of a file.

```
$ cp names saved_names
$
```

Notice that there is no confirmation of the file copy being made.

This silent behavior is typical of any UNIX shell. The shell will typically report errors, but remain silent on success. While disconcerting to those new to UNIX or Linux, you become accustomed to it. The original purpose was to save paper. When UNIX was first created, the terminals were mostly teletype machines and all output was printed to a roll of paper. It made sense to conserve on paper use to keep costs down.

You can use the `ls` command to confirm that the copy really was made. You won't be using up any paper.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library      Public      saved_names
$
```

rename a file

Use the `mv` command to rename a file.

```
$ mv saved_names old_names
$
```

Notice that the shell is once again silent with success. You can use the `ls` command to confirm that the rename really was made.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library      Public      old_names
$
```

delete a file

Use the `rm` (remove) command to delete a file.

```
$ rm old_names
$
```

You can use the `ls` command to confirm that the file was really deleted.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library
$
```

current directory

Use the `pwd` command to determine the current directory. Your version should give the name of your home directory, which normally matches the name of your user account. The example include the directory as part of the prompt (your system may not include this) and the tilde (`~`) character indicates the home directory.

```
$ pwd
/Users/admin
admins-power-mac-g5:~ admin$
```

make a directory

Use the `mkdir` command to make a new directory (folder).

```
$ mkdir testdir
admins-power-mac-g5:~ admin$
```

change directory

Use the `cd` command to change to your new directory (folder). if your prompt includes the current directory, then you will see your prompt change to show the new location.

```
$ cd testdir  
admins-power-mac-g5:testdir admin$
```

confirm directory change

Use the `pwd` command to confirm that you are now in your new directory.

```
$ pwd  
/Users/admin/testdir  
admins-power-mac-g5:testdir admin$
```

return to home directory

Use the `cd` command without any additional arguments to return to your home directory from anywhere.

```
$ cd  
admins-power-mac-g5:~ admin$
```

confirm directory change

Use the `pwd` command to confirm that you are now back in your home directory.

```
$ pwd  
/Users/admin  
admins-power-mac-g5:~ admin$
```

Now you are ready to dive in and start becoming proficient at using the UNIX or Linux shell.

man

chapter 11

summary

This chapter looks at `man`, a Unix (and Linux) command.

`man` is the Unix equivalent of a help function.

`man` is the command used to view manual pages.

This chapter show you how to use the `man` command to get help. Because of huge variation in the various flavors of Unix and Linux, the `man` installed on your computer or server is the best source of detailed information. If you have trouble with any of the lessons in this book or in general use of your Unix or Linux system, always refer to the local `man` for help.

Unix was the first operating system distributed with online documentation. This included `man` (manual pages for each command, library component, system call, header file, etc.) and `doc` (longer documents detailing major subsystems, such as the `C programming language` and `troff`).

example of man command with options

Most BASH commands accept options. These options follow a space character and are typed before you press RETURN or ENTER.

The format is `man` is followed by the name of the command or tool that you want to view. You will get the manual pages for the named command or tool.

The following example uses the manual page for the **date** command or tool.

```
$ man date
DATE (1)          BSD General Commands
Manual            DATE (1)
```

```

NAME
    date -- display or set date and time

SYNOPSIS
    date [-ju] [-r seconds] [-v [+|-]val[ymwdHMS]] ... [+output_fmt]
    date [-jnu] [[mm]dd]HH]MM[cc]yy][.ss]
    date [-jnu] -f input_fmt new_date [+output_fmt]
    date [-d dst] [-t minutes_west]

DESCRIPTION
    When invoked without arguments, the date utility displays the
    current
    date and time. Otherwise, depending on the options specified,
date will
    set the date and time or print it in a user-defined way.

    The date utility displays the date and time read from the kernel
    clock.
    When used to set the date and time, both the kernel clock and
    the hard-
    ware clock are updated.

    Only the superuser may set the date, and if the system
    securelevel (see
    securelevel(8)) is greater than 1, the time may not be changed
    by more
    than 1 second.
    :

```

Typing the RETURN or ENTER key will bring up the next line of the manual page.

Typing the SPACE-BAR key will bring up the next page of text.

Typing the UP-ARROW or DOWN-ARROW key will move up or down one line.

Typing **q** will end viewing the manual page and return to the BASH prompt (the entire manual page will disappear from view).

The **man** command or tool will be a very useful reference.

A man page is typically organized:

NAME : Command name and brief description.

SYNOPSIS : The syntax for using the command, along with the flags (options) the command takes.

DESCRIPTION : Details about the command.

ENVIRONMENT : The environment variables used by the command.

EXIT STATUS : Information about how the command reports errors or success.

FILES : File related to the command.

SEE ALSO : related commands.

STANDARDS : The international standards, if any.

Some systems might have an **AUTHOR** or other sections.

Type `man man` for information about the local version of `man`.

man sections

The first seven distributions of Unix (called V1 UNIX through V7 UNIX and collectively called traditional Unix) included a two volume printed manual, which was divided into eight sections.

Some manual pages are located in sections. There are generally eight sections:

1. General commands
2. System [kernel] calls
3. C library functions
4. Special files (such as devices) and drivers
5. File formats, conventions, and miscellaneous information
6. games and screensavers
7. Macro packages
8. System administration commands and daemons

Note that on some systems, the system administration commands are in section 1m. This section is also sometimes called the Maintenance commands.

Note that on some systems, section 7 is Miscellaneous.

You can look at a particular section by adding the section number to the command line.

```
$ man SECTION-NUMBER commandname
```

You can use the `whatis` command to find the sections and then look at the particular section of your choice.

```
$ whatis crontab
crontab(1)          - maintain crontab files for individual
users (V3)
crontab(5)          - tables for driving cron

$ man 5 crontab
```

-f option

The `-f` option is used to show all `man` page titles for entries that begin with a particular word. `man -f file` will show all the manual pages that have the word “file” in the title.

```
$ man file
```

-k option

The `-k` option runs a search on all manual pages for any manual page with a particular word anywhere on the page. The `man -k file` will show all the manual pages that have the word “file” anywhere in the manual page. The `-k` option can take a while to run.

```
$ man file
```

other

On November 8, 2010, Ramesh Natarajan named this the number 41 most frequently used Unix/Linux command at this web page [50 Most Frequently Used UNIX / Linux Commands \(With Examples\)](#).

A man page (short for manual page) is a form of software documentation usually found on a Unix or Unix-like operating system. Topics covered include computer programs (including library and system calls), formal standards and conventions, and even abstract concepts. A user may invoke a man page by issuing the `man` command. —[Wikipedia man page](#)

cat

chapter 12

summary

This chapter looks at `cat`, a UNIX (and Linux) command.

The `cat` (as in **concatenate**) utility can be used to concatenate several files into a single file.

`cat` is most often used to obtain the contents of a file for input into a Linux or UNIX shell script.

`cat` was part of the original 1969 version of UNICS (the original name for UNIX).

create names file

If you did not create the names file suggested in the [quick tour chapter](#), please do so now, because you will use this file in future exercises. If you already created the names file, then you can safely skip this step and go to the main body of instruction for this chapter.

Type the command line, followed by RETURN or ENTER, then type each of the six suggested lines, each followed by the RETURN KEY. After having entered each line, make sure you are at the beginning of a new (blank or empty) line and type Ctrl-D (hold down the CONTROL key and the D key at the same time).

```
$ cat > names
James
Mary
John
Patricia
Robert
Linda
CONTROL-D
$
```

The choice of names is based on the most popular names in the United States in the year before this chapter was written. Bribe me if you want your name put into the example.

check the file was created

Use `ls` to make sure the file was created properly. It should be added to your directory listing.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library      Public
$
```

display file contents

Use the `cat` command to show the contents of your new file.

```
$ cat names
James
Mary
John
Patricia
Robert
Linda
$
```

creating files

One simple use of `cat` is to create simple files.

Type `cat > file01`, followed by ENTER or RETURN.

```
$ cat > file01
```

The cursor will be at the beginning of a line that has no prompt. You are no longer in the shell, but instead in the `cat` utility. There is no `cat` prompt.

Type the following lines (by convention, all of the input should be in bold, but to make it easier on the eye, it is in italics here):

```
This is a line of text in my first file.
This is another line.
```

```
To be, or not to be: that is the question:

1234567890
ABC
XYZ
abc
xyz
```

Once you have typed in these lines, press RETURN to make sure you are at the beginning of a new line.

Press Ctrl-D (hold down the CONTROL key and the D key at the same time). This indicates end-of-file (EOF), which informs `cat` that you have no more input. This will return you to the shell.

Note that unlike some operating systems, the “.txt” file extension is *not* required by UNIX or Linux. It is optional, but the file extensions are often used to make it easier for a human to distinguish file types.

Now repeat the process with the following file (by convention, all of the input should be in bold, but to make it easier on the eye, it is in italics here):

There is a lot of typing in this example, but it is important for the upcoming exercises. Type the following lines (by convention, all of the input should be in bold, but to make it easier on the eye, it is in italics here):

Because of the length of this file, you may want to download a copy from the internet. There is a copy at <http://www.osdata.com/programming/shell/file02.txt> — if you know how to download a copy and place it in your home directory, save yourself some typing time.

```
$ cat > file02.txt

This is a line of text in my second file.
This is another line.

To be, or not to be: that is the question:
Whether 'tis nobler in the mind to suffer
The slings and arrows of outrageous fortune,
Or to take arms against a sea of troubles,
And by opposing end them? To die: to sleep;
No more; and by a sleep to say we end
The heart-ache and the thousand natural shocks
That flesh is heir to, 'tis a consummation
Devoutly to be wish'd. To die, to sleep;
To sleep: perchance to dream: ay, there's the rub;
For in that sleep of death what dreams may come
When we have shuffled off this mortal coil,
Must give us pause: there's the respect
That makes calamity of so long life;
```

*For who would bear the whips and scorns of time,
 The oppressor's wrong, the proud man's contumely,
 The pangs of despised love, the law's delay,
 The insolence of office and the spurns
 That patient merit of the unworthy takes,
 When he himself might his quietus make
 With a bare bodkin? who would fardels bear,
 To grunt and sweat under a weary life,
 But that the dread of something after death,
 The undiscover'd country from whose bourn
 No traveller returns, puzzles the will
 And makes us rather bear those ills we have
 Than fly to others that we know not of?
 Thus conscience does make cowards of us all;
 And thus the native hue of resolution
 Is sicklied o'er with the pale cast of thought,
 And enterprises of great pith and moment
 With this regard their currents turn awry,
 And lose the name of action. - Soft you now!
 The fair Ophelia! Nymph, in thy orisons
 Be all my sins remember'd.*

Now repeat the process with the following file (by convention, all of the input should be in bold, but to make it easier on the eye, it is in italics here — note the cheat method below):

```
$ cat > numberfile

Once again, use the RETURN key to enter a new line and then use Ctrl-D to exit

`cat`.

If you want to cheat on making this file, you can use the following command on Mac OS X or BSD systems:

```
$ jot 20 1 > numberfile.txt
$
```

You will use these files in many of the exercises in this book.

PC-DOS equivalent

`cat` is the UNIX equivalent of the MS-DOS or PC-DOS command `TYPE`. You can add the PC-DOS equivalent to your shell session with the `alias` command. To make the change permanent, add the following line to the `.bashrc` file in your home directory. Note that if you add this PC-DOS/MS-DOS equivalent, only add the all upper case version, because the lower case `type` is an important UNIX command that you will also need.

```
$ alias TYPE="cat"
```

view a file with `cat`

Type `cat file 01`, followed by the RETURN or ENTER key. You should see the contents of your first file. The beginning of the file may scroll off the top of your screen (this is normal).

```
$ cat file01
This is a line of text in my first file.
This is another line.

$
```

combine files with `cat`

Type `cat file 02 numberfile`, followed by the RETURN or ENTER key. This will show you the contents of both files, one immediately after the other. This is

the use for which `cat` was named.

```
$ cat file02 numberfile
This is a line of text in my second file.
This is another line.

To be, or not to be: that is the question:
Whether 'tis nobler in the mind to suffer
The slings and arrows of outrageous fortune,
Or to take arms against a sea of troubles,
And by opposing end them? To die: to sleep;

That flesh is heir to, 'tis a consummation
Devoutly to be wish'd. To die, to sleep;

This should list your new file that combines combines two of the files you created. The beginning of the listing will scroll off the top of your screen. Don't worry about it. We'll see how to view long files in the chapter about `less` ([less, more, pg](#)).

display with line numbers

The following example uses the command `cat` with the `-n` option to add line numbers to the listing of the file.

Type `cat -n file01.txt`.

```
$ cat -n file01.txt
 1 This is a line of text in my first file.
 2 This is another line.

 3 To be, or not to be: that is the question:
 4
 5 1234567890
 6 ABC
 7 XYZ
 8 abc
 9 xyz
$
```

Notice that the blank line is numbered. You can use the `-b` option to get line numbers, skipping all blank lines.

Type `cat -b file01.txt`.

```
$ cat -b file01.txt
 1 This is a line of text in my first file.
 2 This is another line.

 3 To be, or not to be: that is the question:

 4 1234567890
 5 ABC

 7 abc
 8 xyz
$
```

empty a file

You can use `cat` to empty a file by sending `/dev/null` to the file to be emptied. The null device is bit nothingness.

Start by making a copy of one of the files you just created so that you don't wipe out your hard work.

```
$ cp file01.txt emptyfile
$
```

Use `cat` to verify that the new file really does exist and has a complete copy of the original file.

```
$ cat emptyfile.txt
This is a line of text in my first file.
This is another line.
```

```
To be, or not to be: that is the question:

1234567890
ABC
XYZ
abc

$
```

Now type `cat /dev/null > emptyfile.txt`. This will leave the file in existence, but empty it of all characters.

```
$ cat /dev/null > emptyfile.txt
$
```

Confirm this by using both `cat` and `wc` (word count). The `cat` will simply return to the prompt because there is nothing to print out. The `wc` will show zero lines, zero words, and zero characters.

```
$ cat file01.txt > emptyfile.txt
$ wc names
      0      0      0 emptyfile.txt
$
```

replacing files

The previous example brings up the point that if you use `cat` to output to an existing file, the previous file will be completely replaced by the new one. There is no warning at all.

appending files

You can append to the end of an existing file by using two greater than signs (no spaces in between) `>>`.

Start by making a copy of an existing file and then confirming the copy is correct.

```
$ cp file01.txt file03.txt
$ cat file03.txt
This is a line of text in my first file.
This is another line.

To be, or not to be: that is the question:

1234567890
ABC
```

```
XYZ
abc
xyz
$
```

Now try the append.

```
$ cat numberfile.txt >>.file03.txt
$
```

And confirm that your append worked.

```
$ cat file03.txt
This is a line of text in my first file.
This is another line.

To be, or not to be: that is the question:

hidden characters and spaces

There are several switches that can be used to view files with non-printable characters, trailing spaces, and other hidden characters that can drive you crazy.

On Linux (*not* on BSD or SYS V or Mac OS X), you can use the `-E` command to place a `$` dollar sign at the end of each line. This will reveal trailing spaces that would

not otherwise be visible.

```
$ cat -E names
James$
Mary$
John$
Patricia$
Robert$
Linda$
$
```

The `-v` switch will display non-printing characters. Control characters are preceded by the `^` caret character, so control-X would be listed as `^X`. The delete character (octal 0177) is displayed as `^?`. The non-ASCII characters (high bit set) are displayed with `M-` (for meta) followed by the character for the low seven bits.

On Linux only, you can combine the `-vE` with the `-e` character (show nonprinting characters and the end of line marker).

On Linux only, you can use the `-T` switch to show tab characters as `^I`.

You can use the `-t` switch to show tab characters as `^I` and non-printing characters in the manner described for the `-v` switch. This is the equivalent of the Linux only `-vT`.

On Linux only, you can use the `-A` switch as a shorter version of the `^vET` combination.

squeeze lines

You can use the `-s` switch to suppress multiple consecutive empty lines. Only one empty line will be displayed.

cat in scripts

While `cat` is a great tool for work from the command line, if you find yourself using `cat` in a script, you should probably rethink your algorithm. It is rare that you are on the right path when you find yourself using `cat` inside a shell script. The use of `cat` in a shell script is a common sign of amateur hacking and the script probably has additional serious beginner mistakes and problems as well.

`cat` can correctly be used in a script, but if you find yourself using `cat` in a script, you might want to stop and think about it. See if you can find a better solution.

other

On November 8, 2010, Ramesh Natarajan named this the number 30 most frequently used UNIX/Linux command at this web page [50 Most Frequently Used UNIX / Linux Commands \(With Examples\)](#).

`cat` is a standard Unix utility that reads files sequentially, writing them to standard output. The name is derived from its function to (con)catenate files (from Latin *catenare*, “to chain”). It has been ported to a number of operating systems.

command separator

chapter 13

summary

This chapter looks at the command separator in UNIX or Linux.

semicolon

The semicolon (;) is used as a command separator.

You can run more than one command on a single line by using the command separator, placing the semicolon between each command.

```
$ date; who am i
Mon Aug 27 19:15:41 PDT 2012
admin    ttys000  Aug 27 17:50
$
```

It does not matter if you have a space before the semicolon or not. Use whichever method is more readable and natural for you.

```
$ date ; who am i
Mon Aug 27 19:15:41 PDT 2012
admin    ttys000  Aug 27 17:50
$
```

Each command is processed in order, as if you had typed each individually, with the exception that the line with the prompt is only displayed once, at the end of the series of commands.

If you forget the semicolon, you will get an error message. The following two examples are from different systems.

```
$ date who am i
date: illegal time format
$
```

```
$ date who am i
date: bad conversion
$
```

The semicolon is a common terminator or separator in many common programming languages, including Ada, C, Java, Pascal, Perl, PHP, and PL/I.

Many programmers automatically place the semicolon at the end of any shell command. The shell is fine with this.

```
$ date;
Mon Aug 27 19:15:41 PDT 2012

less, more, pg

chapter 14

summary

This chapter looks at `less`, `more`, and `pg`, a related family of UNIX (and Linux) commands.

`less`, `more`, and `pg` are utilities for reading a very large text file in small sections at a time.

`pg` is the name of the historical utility on BSD UNIX systems.

`more` is the name of the historical utility on System V UNIX systems.

`pg` and `more` are very similar and have almost the same functionality and are used in almost the exact same manner, except for whether you type `pg` or `more`.

`less` is a more modern version that has the capabilities of `more` along with additional new capabilities.

Mac OS X has all three versions installed. It is common to find both `more` and `less` on Linux systems. The older versions are typically included so that old scripts written before the invention of `less` will still work.

The name `less` is a pun, from the expression “less is more.”

Try using `less` with your test file `file01.txt`.

You are going to try `less` first. Which of the three commands work for you depends on which ones are installed.

```
$ less file01.txt
```

Next, you are going to try `more` next.

```
$ more file01.txt
```

And finally, you are going to try `pg` last.

```
$ pg file01.txt
```

At least one of the three will work. Please try the others to see if they are available on your system, but for this exercise, use `less` if it works, otherwise use the first one that works.

```
$ less file01.txt
This is a line of text in my first file.
This is another line.

To be, or not to be: that is the question:

1234567890

Now we are going to see the real power of `less` with a long file.

```
$ less file02.txt
This is a line of text in my second file.
This is another line.

To be, or not to be: that is the question:

Devoutly to be wish'd. To die, to sleep;
To sleep: perchance to dream: ay, there's the rub;
For in that sleep of death what dreams may come
When we have shuffled off this mortal coil,
Must give us pause: there's the respect
That makes calamity of so long life;
For who would bear the whips and scorns of time,
The oppressor's wrong, the proud man's contumely,
The pangs of despised love, the law's delay,
The insolence of office and the spurns
That patient merit of the unworthy takes,
When he himself might his quietus make
File02.txt
```

Notice that you are not yet back to the shell prompt. You are still in the `less` command. You are only one page into the file. `less` allows you to view long files one page at a time, instead of scrolling them off the top of your screen.

Type the `SPACE` key to see another page of text.

```
That patient merit of the unworthy takes,  
When he himself might his quietus make  
With a bare bodkin? who would fardels bear,  
To grunt and sweat under a weary life,  
But that the dread of something after death,  
The undiscover'd country from whose bourn  
No traveller returns, puzzles the will  
And makes us rather bear those ills we have  
Than fly to others that we know not of?  
Thus conscience does make cowards of us all;  
And thus the native hue of resolution  
Is sicklied o'er with the pale cast of thought,  
And enterprises of great pith and moment  
With this regard their currents turn awry,  
And lose the name of action. - Soft you now!  
The fair Ophelia! Nymph, in thy orisons  
Be all my sins remember'd.
```

```
1234567890  
ABC  
XYZ  
abc  
xyz  
(END)
```

Notice that you are not yet back to the shell prompt. Even though the entire file contents have been listed, you are still in the `less` command.

Typing lower case `q` will quit the `less` (or `more` or `pg`) program.

`less` (and the other two utility commands) displays one page at a time. This is in contrast with `cat`, which displays the entire file at once.

file system basics

chapter 15

summary

This chapter looks at the basics of the file system on UNIX or Linux.

By 1971, many fundamentally important aspects of UNIX were already in place, including file ownership and file access permissions.

graphics exmample

In a graphic user interface, you can see the file system directory structure in some kind of picture version. This varies by system.

The following example is from Mac OS X. If you use Mac OS X, the UNIX directories are kept hidden in Finder. You can see them by using Finder's **Go** menu, Go To Folder..., and type "private".

The following example is from Linux.

Do **not** mess with your system files until you know what you are doing. You can cause your computer to stop working.

Some of the typical UNIX/Linux directories are etc, tmp, var, bin,/sbin, dev, boot, or home.

some basics

Both UNIX and Linux organize the entire file system into a single collection (called the directory tree). This is in sharp contrast to Windows dividing the file system into multiple parts, each based on a particular drive or device.

File names are case sensitive. The file names “File” and “file” are different files. This is in sharp contrast with Windows and Macintosh (where they are alternate names for the same file). Note that this is a Mac OS X variation from the standard UNIX practice.

A file name that starts with a period is a hidden file. In Mac OS X, you can toggle between showing and hiding hidden files in Finder by typing Command-Shift-Period.

Neither UNIX nor Linux enforce or recognize file extensions (such as “.txt”). In some operating systems (such as Windows and traditional Macintosh), the file extensions are recognized by the operating system and are used for such purposes as deciding which program is used to open the file. You can add file extensions UNIX or Linux file names (and this is commonly done to help humans organize their files), but the file extension is ignored by the operating system and has no special meaning.

Most modern Linux and UNIX operating systems support long file names with a wide variety of characters, including the space character. Shells are set up for old school UNIX, which had a limited number of characters in file names and a very limited choice of characters in file names. It is best to use these old school limits for files you manipulate through the UNIX or Linux shell. Mac OS X allows you to put file names inside quotation marks (to allow such things as spaces in file names). You can also access files through their inode numbers (which will let the shell work on any file name). Still, it is wise to use only letters, numbers, period, hyphen, and underscore in UNIX or Linux file names (and particularly to avoid the space character).

directory tree

A directory in UNIX or Linux is the same as a folder in Macintosh or Windows.

Directories may contain any combination of files and subordinate directories.

This structure is called a tree. It branches out from a root.

The **root** is the beginning of the filesystem.

A **branch** is a directory and all of its subdirectories.

When a directory is inside another directory, the one inside is called a **child** and the outer one is the **parent**.

A **leaf** is anything that has no children, such as a file.

Unix and Linux are organized into a single file system tree, under a master directory called root and designated by the forward leaning slash (/). This is in sharp contrast with Windows, where there is a separate file system tree for each drive letter.

In UNIX, everything is is a file. Even a directory is just a special file that stores information about other files.

some important directories

The following is a brief description of some of the major directories. Not all systems will have all of these directories.

/ The root directory of the entire file system.

/bin A collection of binary files, better known as programs.

/boot or **/kernel** The files needed to boot or start your computer.

/dev The devices connected to your computer (remember, everything, even hardware devices, is treated as a file in UNIX or Linux).

/etc System configuration files, startup procedures, and shutdown procedures.

/home or **/users** The home directories for each user.

/lib or **/Library** Library files.

/net Other networked systems (again, treated as files).

/opt Third party software. In older systems this might be **/usr/local**

/private On Mac OS X, this is the location of the UNIX files. It is normally kept

hidden from all users in Finder, but is visible in your terminal emulator and shell. Mac OS X has links to the major UNIX directories at the root level so that UNIX and Linux tools can find their files in the standard locations.

/proc Information about processes and devices.

/sbin System binaries (that is, system programs).

/tmp Space for temporary files. Required by all forms of UNIX.

/usr User binaries (programs), libraries, manuals, and docs.

/var Variable files.

Swap Virtual memory on a hard drive. Allows the memory manager to swap some data and program segments to hard drive to expand the amount of memory available beyond the limits of physical memory.

For a more advanced and complete listing, see [major directories](#).

home and working directory

The home directory is the directory that your system places you in when you first log into your system (start the shell). The home directory is defined in the `/etc/passwd` file. This is your personal space on a UNIX or Linux machine.

The tilde character can be used to name your home directory. `~user-name` (where user-name is your actual user name) indicates your home directory.

The working directory is whatever directory you happen to be working in. The working directory is always the same as the home directory when you start a shell session, but you can change your working directory at any time (and typically do change it). Commands normally are applied to the current working directory.

The working directory may also be called the current directory, current working directory, or present working directory.

parent and child directory

Any directories underneath a particular directory are called child directories. Any directory can have zero, one, or many child directories.

The directory above any particular directory is called the parent directory. Any directory has only one parent (with the exception of root, which has no parent).

absolute paths

Every directory or file can be defined by a complete absolute path. The complete absolute path gives every level of directory, starting from the root. An absolute path name is sometimes called the full path name.

An example might be the `/usr/java/bin`. This would be a directory containing Java binaries. In this example, under the `/` root directory there is a directory called `usr` and inside that directory there is a directory called `java` and inside that directory there is a directory called `bin` and inside that directory there are programs for running Java.

Absolute paths normally start at the root of the file system.

relative paths

Relative paths describe where to find a file or directory from the current working directory.

A single period (or dot) character (`./`) indicates that you are describing the path to a directory or file from the current working directory.

If your current working directory is `www` and that directory is under `/usr`, then the file `index.html` inside the current working directory can be described by the full or absolute path of `/usr/www/index.html` or a relative path name of `./index.html`.

The single period is called “dot”.

Two periods (`../` called “dot dot”) take you up one directory to the parent directory.

You can use a series of two dots (`../..`) to go up more than one directory level.

dots and tildes and slashes

`/` Slash is used as a separator between directory names. When slash is the first character in a path name, it indicates the root directory.

`~` Tilde is used to get to your home directory.

`./` Single dot is used to indicate the current working directory.

`../` Two dots are used to indicate the parent of the current working directory.

`.` A single dot in front of a file name (such as `.Trash`) is used to make a hidden

file. Hidden files are only listed when specifically requested.

hidden files

A file name that starts with a period is a hidden file. In Mac OS X, you can toggle between showing and hiding hidden files in Finder by typing Command-Shift-Period. In MS-DOS, a hidden file can't be written to. In UNIX and Linux a hidden file can be read and written.

Some important hidden files are the files used to configure the working environment, including `.cshrc`, `.login`, and `.profile`.

Some programs keep application-specific resources in hidden files or hidden directories.

moving around

This will all make a bit more sense in the next chapter as you learn how to actually move around your file system.

pwd

chapter 16

summary

This chapter looks at `pwd`, a UNIX (and Linux) command.

`pwd` is used to Print the Working Directory. It provides the full path for the current working directory. and is normally run without any options.

`pwd` is a builtin command in `bash`. There is also an external utility with the same name and functionality.

working directory

The working directory is whatever directory you happen to be working in. The working directory is always the same as the home directory when you start a shell session, but you can change your working directory at any time (and typically do change it). Commands normally are applied to the current working directory.

The working directory may also be called the current directory, current working directory, or present working directory.

using pwd

Type `pwd` from the command line, followed by ENTER or RETURN, and you will see the current working directory.

```
$ pwd
/Users/admin
$
```

There's not much else to tell you about this command, but this is an important one because you will continually have the need to know where you are.

moving around

We will go into more detail about these commands later, but for now you need to know how to move around in your file system.

The `ls` command is used to list the contents of the current directory.

Go ahead and type `ls` followed by ENTER or RETURN and you will see a list of the files and directories in your current working directory (which should still also be your home directory).

The `cd` command is used to change directories.

Go ahead and type `cd directory-name` followed by ENTER or RETURN and you will move to the new directory. You can confirm this by then typing `pwd` followed by ENTER or RETURN. You will see that you have successfully changed working directories.

This example includes a directory that may or may not exist on your machine, `cd Desktop`. Pick one of the directories listed on your machine.

```
$ pwd
/Users/admin
$ ls
Desktop      Movies      Send Registration
Documents    Music       Sites
Downloads    Pictures
Library      Public
$ cd Desktop
$ pwd
/Users/admin/Desktop
$
```

As you move around the directory tree, it is common to forget exactly where you are, especially if you do some other tasks (such as file editing). `pwd` provides an easy way to determine where you are and insure that your next actions are happening in the correct directory.

Use `cd` command all by itself to return to your home directory.

```
$ cd
$ pwd
/Users/admin
$
```

other

On November 8, 2010, Ramesh Natarajan named this the number 13 most frequently used UNIX/Linux command at this web page [50 Most Frequently Used UNIX / Linux Commands \(With Examples\)](#).

advanced topic

The remainder of this chapter covers an advanced topic. I am placing this here so that you will be easily able to find them when you are ready for this information.

Eventually you will make use of symlinks and symlinked directories. There will be times when you need to know the actual physical path to the current working directory, not just the logical symlinked path.

options

`pwd` is almost always used without options and never uses any arguments (such as file names). Anything other than legal options typed after `pwd` are ignored. Some shells ignore anything other than the legal options typed after `pwd` without reporting any errors, while most shells report errors for illegal options. All shells seem to ignore all arguments without reporting any errors.

The two main options for `pwd` are `-L` and `-P`.

The `-L` option displays the logical current working directory. This is the default if no options are listed.

```
$ cd /symlink
$ pwd -L
/symlink
$
```

The `-P` option displays the physical current working directory, with all symbolic links resolved.

```
$ pwd -P
/Users/admin
$
```

You can use the results of the `pwd -P` switch to `cd` to the physical directory.

```
$ cd /Users/admin
$
```

You can also use the `-P` switch directly on the `cd` command to change to the physical directory.

```
$ cd -P /symlink
$ pwd
/Users/admin
$
```

You can use the `help` command to get information about `pwd`.

```
$ help pwd
```

Some early Linux shells allow the `--help` command to get information about `pwd`.

```
$ pwd --help
```

Some early Linux shells allow the `--version` option gives the version number for your copy of `pwd`.

```
$ pwd --version
```

command history

chapter 17

summary

This chapter looks at command history in a UNIX (and Linux) BASH shell.

Command history is used to recall recent commands and repeat them with modifications.

You will find that you are often repeating a few common commands over and over with variations in the options and arguments (such as file names). Having the ability to recall a previous example and make a few changes will greatly save on typing.

arrow keys

Pushing the Up Arrow key will bring back previously typed commands one at a time (from most recently typed to the first typed).

Pushing the Down Arrow key will move from the oldest to the newest commands one at a time.

The commands brought back by the Up Arrow and Down Arrow keys will appear after the current prompt.

You can press the ENTER or RETURN key to immediately run any selected command.

After using the Up Arrow or Down Arrow keys, your cursor is at the end of the line. You can use the DELETE key to remove old arguments and then start typing in new ones.

Note that holding down the CONTROL key and pressing the p key at the same time will take you to the previous command just like the Up Arrow key. This is written ^p.

Holding down the CONTROL key and pressing the n key at the same time will take you to the next command just like the Down Arrow key. This is written ^n.

Pressing the META key (or on some systems pressing the ESCAPE key), then releasing it, then typing the less than < key will take you to the beginning of the command history. Pressing the META key (or on many modern systems pressing the ESCAPE key or ESC key), then releasing it, then typing the greater than > key will also move to the end (most recent) command history. These are written M-< and M->.

editing a line

As mentioned above, when you use command history, the cursor is at the end of the recalled command.

Either the Left Arrow or ^b (CONTROL-B) will go one character backward (towards the beginning of line).

Either the Right Arrow or ^f (CONTROL-F) will go one character forward (towards the end of line).

Typing inside a line will place characters in front of the cursor. The character inside the cursor remains unchanged.

Using the DELETE key will delete the character in front of the cursor. The character inside the cursor remains unchanged.

^k (CONTROL-K) will delete everything from the cursor to the end of the line.

^d (CONTROL-D) will delete the character inside (under) the cursor.

M-b will move you one word back (towards beginning of line). In this case, a word is a collection of characters, usually separated by a space character.

M-f will move you one word forward (towards end of line).

^e (CONTROL-E) will move to the end of the line and ^a (CONTROL-A) will move to the beginning of the line.

Once you have edited your command, use the RETURN or ENTER key to run the

new command. You can use the ENTER or RETURN key from anywhere in the command line. You do not have to be at the end of the command line.

built-in commands

chapter 18

summary

This chapter looks at built-in commands in a UNIX (and Linux) BASH shell.

tools

Most of the commands in the UNIX or Linux shell are actually programs. If you look at the `usr/bin` directory, you will see the actual programs. Most of these programs were written in the C programming language.

There is a common core of tools/commands that will be available on almost every UNIX or Linux machine, but exactly how many and which commands/tools are available varies widely.

The good news is that if a command or tool is missing from your system, you can go out and get the source code and recompile it for your local computer.

built-in

Many of the shells have special built-in commands. These are *not* separate programs, but are part of the code for the shell itself.

One example would be the shell command `cd` that you just saw in the previous [quick tour chapter](#).

There are some built-in commands are only available in selected shells and these can make your scripts shell-dependent.

Some examples of built-in commands include the `history` command in the C shell, and the `export` command in the Bourne shell. The `cd` command is built-in in both `bash` and `csch`.

`echo` is an example of a command that is built into both `bash` and `csch`, but also exists externally as a utility.

overriding built-in commands

You can override any built-in commands by giving the full path name to an external command or utility. If `bash` finds a slash character (`/`) anywhere in a command, the shell will not run the built-in command, even if the last component of the specified command matches the name of a builtin command.

As an example, using the command `echo` will run the version of the command that is built into `bash`, while specifying `/bin/echo` or `./echo` will ignore the built-in command and instead run the designated utility.

Overriding can be used to run alternative versions of commands or to extend the built-in command to add additional features.

determining builtin or external

You can use the `type` command to determine if a particular command is a built-in command or an external utility. If the command is an external utility, you will also be told the path to the external command.

```
$ type echo
echo is a shell builtin
$ type mkdir
mkdir is /bin/mkdir
$
```

You can use the `which` command to locate a program in your path.

```
$ which echo
/bin/echo
$
```

You can use the `whereis` command to locate a program in your path.

```
$ whereis echo
/bin/echo
$
```

In `cs`h and `tc`sh you can use the `where` command to locate a program in your path.

```
% where echo
/bin/echo
%
```

problems

You can use the `type` command to determine if a particular command is a built-in command or an external utility. If the command is an external utility, you will also be told the path to the external command.

If something bad happens to your computer, if the shell is still loaded in memory and running, any of the built-in commands will still work correctly, even if the entire file system (including all hard drives) disappears or becomes unavailable for any reason.

built in command chart

The following chart shows the built-in commands and external utilities for `bash` and `cs`h for Mac OS X. This will be similar for Linux and other UNIXes.

External commands marked `No**` under the External column do exist externally, but are implemented using the built-in command.

ls

chapter 19

summary

This chapter looks at `ls`, a UNIX (and Linux) command.

`ls` is the UNIX (and Linux) list command.

The `ls` command was described in the first UNIX book, *UNIX Programmer's Manual*, by Ken Thompson and Dennis Ritchie, published November 3, 1971.

list directory contents

Use the `ls` command to list the contents of the current working directory (files and directories).

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures
Library      Public
$
```

PC-DOS equivalents

`ls -la` is the UNIX equivalent of the MS-DOS or PC-DOS command `DIR`. You can add the PC-DOS equivalent to your shell session with the `alias` command. To make the change permanent, add the following line to the `.bashrc` file in your home directory. Note that if you add this PC-DOS/MS-DOS equivalent, only add the all upper case version, because the lower case `type` is an important UNIX command that you will also need.

```
$ alias DIR="ls -la"
```

`ls -la` | `less` is the UNIX equivalent of the MS-DOS or PC-DOS command `DIR /P`.

list all

Type `ls` with the `-A` option to get a list of all entries other than `.` (single dot) and `..` (double dot).

```
$ ls -A
```

list with indicators

Type `ls` with the `-F` option to have special indicators for special files.

```
$ ls -F
Desktop/      Music/        file01.txt
Documents/    Pictures/     file02.txt
Downloads/    Public/       names
Library/      Send registration@ numberfile.txt
Movies/       Sites/        testdir/
$
```

A slash `/` will be added after every pathname that is a directory. An asterisk `*` will be added after every file that is executable (including scripts). An at sign `@` will be displayed after each symbolic link. An equals sign `=` will be displayed after each socket. A percent sign `%` will be displayed after each whiteout. A vertical bar `|` will be displayed after each item that is a FIFO.

`ls -F` is a builtin command in `csh`.

hidden files

The `-a` option will give a list of all files, including hidden files.

```
$ ls
Desktop      Downloads    Movies      Pictures    scripts
Documents    Library      Music       Public
$ ls -a
.            .cups        Library     scripts
..           .vminfo      Movies
.DS_Store    Desktop      Music
.Trash        Documents    Pictures
-bash_history Downloads    Public
$
```

The hidden or invisible files are hidden to make it less likely that they are

accidentally corrupted or deleted.

list specific directory

So far all of the examples have been on the current working directory. If you name a specific directory, you will get a listing for that directory. You may use any of the flags you have already learned.

```
$ ls Music
GarageBand      iTunes
$
```

common error

The most common error is attempting to `ls` a directory or file that doesn't exist.

multiple directories

You can list multiple directories, each separated by a space character. This will give the listing for each directory, one at a time.

```
$ ls Movies Music
Movies:
iMovie Projects.localized

Music:
GarageBand      iTunes
$
```

separate lines

The `-l` option will cause each item on its own line. This is useful for scripts that will do further processing.

```
$ ls -l
Desktop
Documents
Downloads
Library
Movies
Music
Pictures
Public
scripts
$
```

option grouping

You can combine multiple options for a single command. For example, if you wanted to show visible and invisible files *and* show the file indicators, you can use both the `-F` and `-a` options together.

```
$ ls -a -F
./          .cups/      Library/    scripts
../         .vminfo     Movies/
.DS_Store   Desktop/    Music/
.Trash/     Documents/  Pictures/
-bash_history Downloads/   Public/
$
```

You can group option by listing them in any order (with a few rare exceptions) and either with their own minus sign or after a single minus sign. All of the following versions of the `ls` command work the same way:

```
$ ls -a -F
$ ls -F -a
$ ls -aF
$ ls -Fa
$
```

list specific file

You can `ls` a specific file or files. This is primarily useful with other options that report additional information.

```
$ ls filename
```

list specific directory

You can `ls` a specific directory. It will list all of the files in the designated directory.

```
$ ls directory
```

You can the `-d` switch to have `ls` list just the named directory. This is pretty much useless by itself, but useful when combined with switches for specific kinds of information.

```
$ ls -d directory
```

list files and directories

You can `ls` a a combined list of specific files and directories.

```
$ ls filename directory
```

common error

The most common error is attempting to `ls` a directory or file that doesn't exist.

colorized

Use the `-G` option to colorize the output of `ls`.

```
$ ls -G
Desktop      Downloads    Movies       Pictures     file01.txt
names        scripts      Documents    Library      Music
Public       forthfunctions numberfile.txt testdir
$
```

You can edit your `.profile` file to set specific colors for directories, sockets, pipes, symlinks, etc. You can also set colors for executable files. You can even set colors for specific file extensions.

The default for Mac OS X (shown above) is royal blue for directories.

Daniel Sandman wrote:

I have this as an alias in my `~/.zshrc`.

```
alias ls="ls --color=auto -FshX"
```

list all subdirectory contents

Use the `-R` switch to show all of the contents of all of the subdirectories. This can be a huge list. The `-R` stands for recursive.

```
$ ls -R
```

long listing

Use the `-l` switch for a long listing. Each file or directory is on its own line. One sample line shown:

```
$ ls -l
drwxr-xr-x  2 admin  staff  68 Aug 20 16:43 testdir
$
```

The order of information

Mode file type (see chart below), file permissions (owner, group, other in the order of read, write, execute), possible special information.

```
b  Block special file
c  Character special file
d  Directory
l  Symbolic link
s  Socket link
p  FIFO (pipe)
-  Regular file
```

If the file or directory has extended attributes the permissions field is followed by the `@` character.

If the file or directory has extended security information (such as an Access Control List), the permissions field is followed by the `+` character.

links The number of links.

user The user name. If the user name is unknown, the numeric ID is shown. Adding the `-n` switch will force the numeric ID instead.

group The group name. If the group name is unknown, the numeric ID is shown. Adding the `-n` switch will force the numeric ID instead.

size The number of bytes. If the file is a character special or block special file, the major and minor device numbers replace the size field.

date and time The abbreviated month, day-of-month, hour and minute the file was last modified. If the modification time is more than six (6) months past or future, then the year replaces the hour and minute fields.

pathname The name of the file or directory. If the file is a symbolic link, the

pathname of the linked-to file is preceded by `->`.

The first line (before the individual file entries) is the number of blocks used by the files in the directory.

list in reverse order

Use the `-r` switch to show the results in reverse order.

```
$ ls -r
```

list by time of modifications

Use the `-t` switch to show the results by time of modification (most recent first).

```
$ ls -t
```

list by time of last access

Use the `-u` switch to show the results by time of last access (most recent first).

```
$ ls -u
```

list by time of file creation

Use the `-U` switch to show the results by time of file creation (most recent first).

```
$ ls -U
```

show time information

Use the `-T` switch to show full time information: month, day, hour, minute, second, year. This switch needs to be combined with the `-l` switch. Sample line below:

```
$ ls -Tl
drwxr-xr-x  2 admin  staff  68 Aug 20 16:43:15 2013 testdir
$
```

show extended information

Use the `-@` switch to show extended attribute keys and sizes. This switch needs to be combined with the `-l` switch.

```
$ ls -@l
```

show Access Control List

Use the `-e` switch to show the Access Control List (ACL) associated with a file when there is an ACL. This switch needs to be combined with the `-l` switch.

```
$ ls -el
```

show number of blocks

Use the `-s` switch to show the size in blocks for each file. The UNIX default block size is 512 bytes, but this can vary different on modern versions of UNIX or Linux.

```
$ ls -s
```

advanced information

scripting gotchas

This is an advanced item, but it is placed in this chapter so that you can easily find where to look it up when you need it.

Do not use the output of `ls` in a BASH `for` loop.

```
$ for i in $(ls *.mp3); do # Wrong!
$     command $i # Wrong!
$ done # Wrong!

$ for i in $(ls *.mp3) # Wrong!
$ for i in `ls *.mp3` # Wrong!
```

If any file name has spaces in it, then it will be word split. So, the MP3 for Alex Clair's "Too Close" (number four song on his "The Lateness of the Hour" album) might be 04 Too Close. In that case, your command would run on the files "04", "Too", and "Close", rather than "04 Too Close". Additional errors likely to follow. Listen to the song "[Too Close](#)" for free.

Double quote won't work either because that will cause the entire output of the `ls` command to be treated as a single item. Your loop will run once on all of the file names concatenated together.

```
$ for i in "$(ls *.mp3)"; # Wrong!
```

The solution is to run your loop without even using `ls`, relying on BASH's filename expansion. Don't forget to check for the possibility that there are no qualifying files in the current directory.

```
$ for i in *.mp3; do  
$   [[ -f "$i" ]] || continue  
$   command "$i"  
$ done
```

Thanks to Daniel Massimillano for a correction.

cd

chapter 20

summary

This chapter looks at `cd`, a UNIX (and Linux) command.

`cd` is used to Change Directory.

`cd` is a builtin command in `bash` and `csh`. There is also an external utility with the same name and functionality.

`cd` is used to change the directory you are working in. You type the command `cd` followed by a space and then the directory (folder) that you want to change to.

The `chdir` (change directory) command, the predecessor of `cd`, was described in the first UNIX book, *UNIX Programmer's Manual*, by Ken Thompson and Dennis Ritchie, published November 3, 1971.

change directory example

For the purposes of an example, we need to first find a directory to change to. Type the command `ls -F`.

```
$ ls -F
Desktop/      Music/        file01.txt
Documents/    Pictures/     file02.txt
Downloads/    Public/       names
Library/      Send registration@ numberfile.txt
Movies/       Sites/        testdir/
$
```

Your listing will be different than this one. Look for any name that has a slash (/) after it and use it as the *directory_name* in the following example. If you created the `testdir` in the [quick tour chapter](#), then use the second example listed here.

```
$ cd directory_name
admins-power-mac-g5:directory_name admin$
```

If you created the testdir in the [quick tour chapter](#), then use the following example:

```
$ cd testdir
admins-power-mac-g5:testdir admin$
```

Use the pwd command to confirm that you are now in your new directory.

```
$ pwd
/Users/admin/testdir
admins-power-mac-g5:testdir admin$
```

Use the cd command without any additional arguments to return to your home directory from anywhere.

```
$ cd
admins-power-mac-g5:~ admin$
```

Use the pwd command to confirm that you are now back in your home directory.

```
$ pwd
/Users/admin
admins-power-mac-g5:~ admin$
```

return to home directory

You can always return to your home directory from anywhere by typing cd command all by itself.

```
$ cd
admins-power-mac-g5:~ admin$
```

If the HOME variable is set (which is normal), then you can use it to return to your home directory.

```
$ cd $HOME
admins-power-mac-g5:~ admin$
```

return to previous directory

To return to the previous directory, type `cd ~-`

```
admins-power-mac-g5:~ admin$ cd testdir
changing to the testdir directory
admins-power-mac-g5:testdir admin$ cd ../Library
changing to the Library directory
admins-power-mac-g5:Library admin$ cd ~-
changing back to the testdir directory, the immediately preceding directory
admins-power-mac-g5:testdir admin$
```

go one level up

Type `cd ../` to go up one directory level. The following example starts in the testdir directory and goes up one level to the home directory.

```
admins-power-mac-g5:testdir admin$ cd ../
changing to the home directory, one level up from the testdir directory
admins-power-mac-g5:~ admin$
```

You can type a series of `../` to go up multiple directories. `cd ../ ../` will go up two levels. `cd ../ ../ ../` will go up three levels. And so on.

common cd errors

The two most common `cd` errors:

- Attempting to `cd` to a file. You can only `cd` to a directory.
- Attempting to `cd` to a directory that doesn't exist. The directory must already exist.

PC-DOS equivalent

`cd ../` is the UNIX equivalent of the MS-DOS or PC-DOS command `CD ..`. You can add the PC-DOS equivalent to your shell session with the `alias` command. To make the change permanent, add the following line to the `.bashrc` file in your home directory.

```
$ alias CD..="cd .."
```

advanced topic

The following is an advanced topic. I am placing it in this chapter so that you can easily find it when you need it in the future.

If you use `cd` to change to a symlinked directory, `pwd` will show the logical symlinked path rather than the actual physical path. You can use the `-P` option to force the change of directory to be resolved to the actual physical path.

```
$ cd -P /symlink
$ pwd
$ /Users/admin
$
```

chapter 21

summary

This chapter looks at `cp`, a UNIX (and Linux) command.

`cp` is used to copy a file.

`cp` was part of the original 1969 version of UNICS (the original name for UNIX).

copy a file

Use the `cp` command to make a copy of a file. This example assumes you created the `names` file in the [quick tour chapter](#).

```
$ cp names saved_names
$
```

Notice that there is no confirmation of the file copy being made.

This silent behavior is typical of any UNIX shell. The shell will typically report errors, but remain silent on success. While disconcerting to those new to UNIX or Linux, you become accustomed to it. The original purpose was to save paper. When UNIX was first created, the terminals were mostly teletype machines and all output was printed to a roll of paper. It made sense to conserve on paper use to keep costs down.

You can use the `ls` command to confirm that the copy really was made. You won't be using up any paper.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library      Public      saved_names
```

```
$
```

`cp` makes an exact copy of a file.

common errors

Common errors:

- the source is a directory
- the source does not exist
- attempt to copy a file to itself

overwriting files

The plain `cp` command will simply replace any existing file with a matching name. No warning.

```
$ cp names saved_names  
$
```

In the above example, if the file `save_names` already existed, it will be replaced with a copy of `names`.

interactive confirmation

You can type `cp -i` to get an interactive confirmation before replacing a file. Enter `n` or just the RETURN key to stop the copy and prevent an overwrite. Enter `y` to go ahead with the copy and replace the old file.

```
$ cp -i names saved_names  
overwrite saved_names? (y/n [n]) n  
not overwritten  
$
```

force overwrites

Use the `-f` option to force the copy to overwrite any file with a matching name. This is the same as the default action of the `cp` command.

```
$ cp -f names saved_names
```

copy to a directory

To copy a file to a different directory, name the directory with a leading slash (/) as the destination:

```
$ cp sourcefilename directory/
```

Try this example:

```
$ cp names testdir/  
$ ls testdir  
names  
$
```

A copy of the file will be stored in the specified directory with the original name. You can add a new file name after the directory if you want to change the name of the copy at the same time you create it in the specified directory.

```
$ cp sourcefilename /directory/newname
```

Try this example:

```
$ cp names testdir/newnames  
$ ls testdir  
names          newnames  
$
```

copying an entire directory

To copy an entire source directory to a different directory, give the names of each directory:

```
$ cp sourcedirectory destinationdirectory/
```

This does not work on all systems without using the `-r` or `-R` switch (see next item).

copying an entire directory and subdirectories

If you want to copy a directory and all of its subdirectories (the directory subtree), then use the recursive switch. The recursive switch will be either `-r` or `-R`. Check the man page for your system.

```
$ cp -r sourcedirectory destinationdirectory/
```

Mac OS X supports both the `-r` and the `-R` switches for compatibility with legacy scripts, but on Mac OS X the `-r` option will not correctly copy special files, symbolic links, or fifos, while the `-R` option will copy them correctly.

Try this example:

```
$ cp -r testdir newdir/  
$ ls newdir  
names          newnames  
$
```

copying multiple items to a directory

You can create a list of sources (both files and directories) that are all put into a single destination directory. The last item listed must be a directory and is the destination. You can optionally use the `-r` or `-R` flag (which ever is appropriate for your system) to recursively copy source directories with all of their subdirectories. Some systems may require the `-r` or `-R` switch if you include directories as well as files into the source list.

```
$ cp sourcedirectory1/ sourcedirectory2/sourcefile  
destinationdirectory/
```

common error

A common error is that the destination folder already exists.

PC-DOS equivalent

`cp -i` is the UNIX equivalent of the MS-DOS or PC-DOS command `COPY`. You can add the PC-DOS equivalent to your shell session with the `alias` command. To make the change permanent, add the following line to the `.bashrc` file in your home directory. Note that this version adds interactive questioning before replacing a file, in a manner similar to PC-DOS. Note also that if you add this PC-DOS/MS-DOS equivalent, only add the all upper case version, because the lower case `type` is an important UNIX command that you will also need.

```
$ alias COPY="cp -i"
```

mv

chapter 22

summary

This chapter looks at `mv`, a UNIX (and Linux) command.

`mv` is used to move or rename a file.

rename a file

Use the `mv` command to rename a file. This example assumes you created the `names` and `saved_name` files in the [quick tour chapter](#).

```
$ mv saved_named old_names
$
```

Notice that the shell is once again silent with success. You can use the `ls` command to confirm that the rename really was made.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library      Public      old_names
$
```

common error

A common error is the source file not existing (often because of a typing or spelling error).

interactive confirmation

Use the `-i` option to have an interactive confirmation before overwriting an

existing file. Note that this does not seem to work on Mac OS X Mountain Lion.

```
$ mv -i names saved_names
overwrite saved_names? (y/n [n]) n
not overwritten
$
```

force overwrites

Use the `-f` option to force rename (`mv`) to overwrite any file with a matching name. This is the same as the default action of the `mv` command.

```
$ mv -f names saved_names
```

prevent overwrites

Use the `-n` option to prevent rename (`mv`) from overwriting any file with a matching name.

```
$ mv -n names saved_names
```

PC-DOS equivalent

`mv` is the UNIX equivalent of the MS-DOS or PC-DOS command `REN`. You can add the PC-DOS equivalent to your shell session with the `alias` command. To make the change permanent, add the following line to the `.bashrc` file in your home directory.

```
$ alias REN="mv"
```

rm

chapter 23

summary

This chapter looks at `rm`, a UNIX (and Linux) command.

`rm` removes or deletes files or directories.

`rm` is used to remove or erase a file.

`rm` was part of the original 1969 version of UNICS (the original name for UNIX).

delete a file

Use the `rm` (remove) command to delete a file. This example assumes you created the `saved_names` and `old_names` files in the [quick tour chapter](#).

```
$ rm old_names
$
```

You can use the `ls` command to confirm that the file was really deleted.

```
$ ls
Desktop      Movies      Send registration
Documents    Music       Sites
Downloads    Pictures    names
Library
$
```

safety

Before using `rm`, especially `rm` with globbing (such as using wild cards), try the same glob with `ls` first to make sure you will be removing the files you intend to remove.

For example, before running `rm foo*.txt`, run `ls foo*.txt`. Read the list and be sure that you are going to delete the files you really intend to delete.

Some UNIX and Linux users modify the `rm` command by aliasing it with the interactive form, `rm -i`. This changes the behavior of `rm` to always ask before deleting files.

```
$ alias rm="rm -i"
```

Unfortunately, this alias can cause some scripts to fail (possibly including system scripts that were provided with your distribution).

An alternative is to alias to a different, non-conflicting name. In this case, `del` might be appropriate.

```
$ alias del="rm -i"
```

PC-DOS equivalent

`rm -i` is the UNIX equivalent of the MS-DOS or PC-DOS command `DEL`. You can add the PC-DOS equivalent to your shell session with the `alias` command. To make the change permanent, add the following line to the `.bashrc` file in your home directory. Note that this version adds interactive questioning before deleting a file, in a manner similar to PC-DOS.

```
$ alias DEL="rm -i"
```

deleting a file name with spaces

Sometimes a file name has space or tab characters in it. This is strongly discouraged on a server, but is fairly common on a desktop Linux system. Enclose the file name in quotation marks.

```
$ rm "sample file"  
$
```

recursive

Type `rm` followed by the option `-r` followed by *directory name* to delete recursively. This means that the directory and all of its subdirectories will be removed,

even for non-empty directories. This is a fast way to remove directories and files in a single command. **This is also a very dangerous command.** Always include the directory name rather than `*` to prevent accidentally destroying the wrong directories.

```
$ rm -r directory-name
$
```

This is also a very dangerous command. You may want to include the `-i` interactive flag to confirm that you are really deleting the correct files.

```
$ rm -ri directory-name
$
```

dangerous command

WARNING! Do not test these examples. They will delete all of the files on your computer.

These commands often appear in cruel internet jokes.

```
$ rm -rf / # WARNING! This will delete all of the files on your
computer.
$ rm -rf * # WARNING! This will delete all of the files on your
computer.
```

advanced information

file won't delete

The following information is rather advanced and requires knowledge of that hasn't yet been introduced in this tutorial. This advanced material is placed here so that you can easily find it when using this nerdary as a reference rather a tutorial. For now, just note that this material is located here.

Sometimes you will attempt to delete a file and the shell will tell you the file can't be deleted.

```
$ rm stubborn_file
rm: cannot remove `stubborn_file': Permission denied
$
```

You can try to `chmod 777` the file or `chown` the file or directory.

The next line of defense is to use `sudo` and delete the file as root or superuser.

```
$ sudo rm stubborn_file
$
```

If you can't remove the file as root, then there are a number of different possibilities to consider. The following is a checklist of some of the possibilities.

It might be a matter of directory permissions. Directory permissions, not file permissions, control who can delete and create files. If you don't have write-permissions for the directory, you can't delete the file.

Interestingly, the converse is also true. A user can delete a file set to 000 and owned by root in a directory that he or she has access to, even though they can't even view the file contents. Of course, the sticky bit on a directory sets files so that they can only be deleted by their owners. It is common to set the sticky bit on certain key directories, such as `/tmp/`.

The root or superuser should be able to override any regular permissions and delete any file anyway, so the you will want to check Access Control Lists (ACLs), extended attributes, and other special features that may be in play. You can try `lsattr` to list the attributes on a Linux second extended file system (ext2) and `chattr` to change the attributes. The `a` attribute is append mode and can be removed with `chattr -a stubborn_file`. The `i` attribute is immutable and can be removed with `chattr -i stubborn_file`. On Mac OS X, you can use the similar `chflags` command (for UFS, HFS+, SMB, AFP, and FAT). See the man pages for details on these commands.

Another possibility is that the file may be on Network File System (NFS). Your local root won't matter. You need root access to the machine running NFS.

```
$ rm stubborn_file
$
```

There may be unusual characters in the file name.

You may be able to use auto-completion to correctly escape the file name. Type the first character of file name, then press the Tab key. The shell should auto-complete the file name with correct escapes for unusual characters.

You can check to see if there are invisible or non-printing characters or spaces or tabs at the beginning or end of the file name by comparing the results of `ls`

`stubborn_file` with the output of `ls *stubborn_file*`. If you get no result from the first command and a result from the second command, then there are extra characters. Try using the inum solution mentioned below.

Another method for checking for the real file name:

```
$ ls -la stubborn_file | sed -n 1
-rw-r--r-- 1 Mac staff 17 Jan 11 02:56 stubborn_file$
$
```

Another method for checking for the real file name is to use the `-B` option to force the printing of non-printable characters. The non-printable characters will be presented as `\xxx` where `xxx` is the numeric character code in octal. The `-b` option is similar, but will use C programming language escape codes whenever possible.

I have read that Linux supports the `-Q` option to place the file names within quotation marks, but I have not tested this on a Linux system.

Once you identify the real file name, you can use quotation marks to give the complete file name.

```
$ rm "stubborn file"
$
```

In some cases you may need to use single quotes. An example would be a file name with the character `$` in it.

```
$ rm 'stubborn $file'
$
```

You can try to remove the file using its inode rather than name. Use the correct inum output from your real session. Note there may be a long delay before success, so you may want to run this command in the background.

```
$ ls -i stubborn_file
3982096 stubborn_file
$ find . -inum 3982096 -exec rm -f {} \;
$
```

shred

chapter 24

summary

This chapter looks at `shred`, a Linux command.

`shred` is a secure method for eliminating data.

```
$ shred filename
```

Files are normally deleted by removing their file table entries. The data remains out on the hard drive (which is how file recovery programs can work).

Writing over the file actually eliminates the data so that nobody can ever read it.

This can take a while for large files or for many files.

Files deleted with `shred` can *not* be recovered (unless you previously stored them in a backup somewhere else).

Be especially careful when using `shred` with any wildcard characters.

You should probably never run `shred` from root or superuser.

Mac OS X

Mac OS X offers secure empty trash from the graphic interface (Finder menu, Secure Empty Trash menu item, which is directly under regular Empty Trash).

Mac OS X also has the `srmm` command, which is the secure equivalent of regular `rm`.

```
$ srm -rfv -s filename
```

The `-z` option will overwrite with zeros. The `-s` option will overwrite in a single pass (one pass) of random data. The `-m` option will perform a Department of Defense seven-pass deletion. No options will result in a 35-pass file erase, which will take a long time.

mkdir

chapter 25

summary

This chapter looks at `mkdir`, a UNIX (and Linux) command.

`mkdir` is used to make a directory.

make a directory

Use the `mkdir` command to make a new directory (folder).

```
$ mkdir testdir
admins-power-mac-g5:~ admin$
```

The example includes an extended prompt that shows the current working directory. Using the `ls` command will confirm that the directory now exists in the current working directory.

common errors

`mkdir` will fail if the directory already exists.

`mkdir` will fail if a file with the same name already exists.

multiple directories

You can name multiple directories with the `mkdir` command. Simply list each of the new directories after the `mkdir` with a space character between each directory name.

```
$ mkdir directory1 directory2 directory3
admins-power-mac-g5:~ admin$
```

create with permissions

Use the `-m` option to create a directory with specific permissions. The old school version of the `-m` switch used octal permissions.

The permission choices are the same as with the `chmod` command. Replace *mode* (`a=rwx` in the following example) with an appropriate mode argument. In the following example, the *mode* is `a=rwx`, which would give all users read, write, and execute permissions.

```
$ mkdir -m mode directory1 directory2 directory3
admins-power-mac-g5:~ admin$
```

This option is often used in shell scripts to lock down temporary directories.

use a path

All of the previous examples involved the current working directory. You can use `cd` to move to a new directory and create a directory there. Or you can give an entire path name to a specific directory, using either a relative or absolute path name to create the directory anywhere in the file system.

```
$ mkdir directory1/directory2/directory3
admins-power-mac-g5:~ admin$
```

common error

The most common error in using `mkdir` with a path is one or more of the intervening directories haven't been made yet. `mkdir` will fail.

creating parent directories

There is a solution to this problem. You can use the `-p` option to create directories along the path. You can therefore, create a series of parent and child directories all at once.

If you use the `-p` option and the directory already exists, the `mkdir` command will continue on through your path and create new directories as needed down to the last one you list.

```
$ mkdir -p directory1/directory2/directory3
admins-power-mac-g5:~ admin$
```

Intermediate directories are created with the permission bits of `rwXrwXrwX` (0777) as modified by the current umask, plus the write and search permission for the owner.

view directories made

You can use the `-v` to get a list of the directories created. This is most often used with the `-p` option, but you can use it by itself.

```
$ mkdir -v directory1/directory2/directory3
$
```

```
$ mkdir -pv directory1/directory2/directory3
$
```

The `-v` option is considered nonstandard and should not be used in shell scripts.

spaces in names

To create a directory with space in the directory name, you need to use quoting for the entire name so that the shell treats it as a single name rather than a series of individual directory names separated by spaces.

```
$ mkdir "directory name"
$
```

While it is common to use spaces in file and directory names in graphic user interfaces (such as Macintosh, OS/2, and Windows, as well as Gnome or KDE), this may cause failure with older scripts or programs. Some programs may convert the spaces in a directory name into `%20`, such as converting "Name with spaces" into "Name%20with%20spaces". This might cause confusion or failure.

long options

The long options are:

<code>-m</code>	<code>--mode=MODE</code>
<code>-p</code>	<code>--parents</code>
<code>-v</code>	<code>-verbose</code>

```
-Z      --context=CONTEXT
        --help
        --version
```

advanced information

The following items are advanced topics. They are included here so that you can easily find them when needed.

scripting mkdir

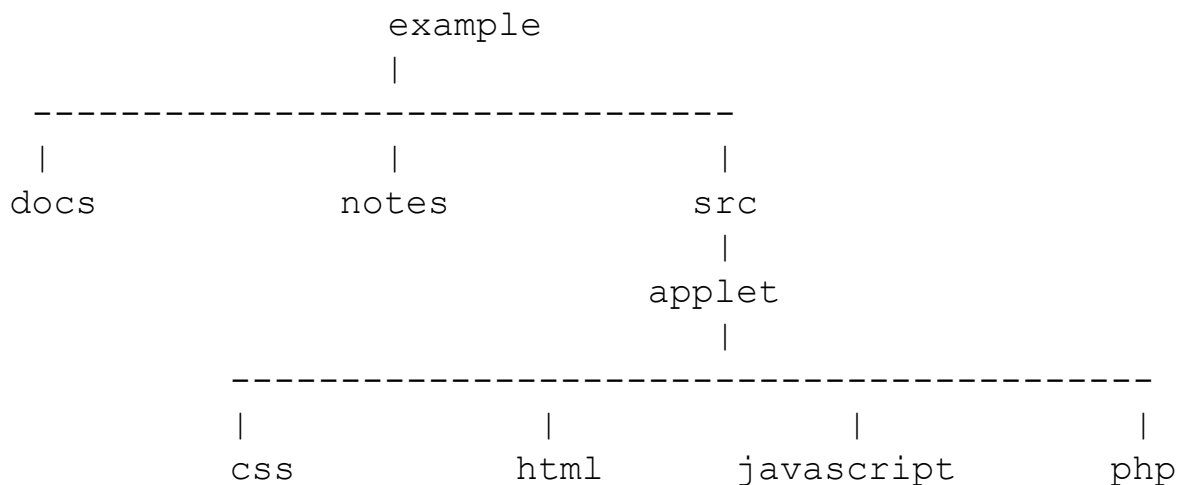

If you create a directory in a script, you will want to check first to see if the script actually exists. The following line of code will create a directory called `tmp`

```
$ test ! -d $HOME/tmp && mkdir $HOME/tmp
```

This line relies on the short circuit evaluation by the `test` statement. The first part of the `test` checks to see if the specified directory does not exist. If the specified directory already exists, the `test` fails and further evaluation stops. If the `test` passes, then the `mkdir` command is run.

create an entire directory tree

ou can create an entire directory tree all at once. The example will create the following directory tree (which will be confirmed with `ls` commands):

```
$ mkdir -p
example/{src/applet/{css,html,php,javascript},docs,notes}
$ ls example
docs    notes  src
```

```
$ ls example/src
applet
$ ls example/src/applet
css      html      javascript  php
$
```

The { } curly braces are used to create directories at the same level and the directories at the same level are separated by the , comma.

create a directory and change to it

You can use the following function to both `mkdir` a new directory and `cd` to the newly created directory, all in one command.

```
$ function mkdircd () { mkdir -p "$@" && eval cd "\"\${$#}\""; }
$
```

This function will work even if the directory name has spaces.

various operating systems

The `mkdir` command appears in the Linux, Mac OS X, OS/2, PC-DOS (also called MS-DOS), UNIX, and Windows operating systems. It also appears in the **PHP** programming language. In OS/2, PC-DOS, and Windows, the command can be abbreviated `md`.

set security context

When running SELinux, you can use the `-Z` or `--context` switch to set the security context. You must give the full context as `user:role:type`.

An example from the CentOS forum:

```
$ mkdir --context=system_u:object_r:httpd_sys_content_t:s0
/var/www/example.org
$
```

history

The `mkdir` command appeared in Version 1 of AT&T UNIX. In early versions of UNIX, the `mkdir` command had to be `setuid root` because the kernel did not yet have a `mkdir` syscall. The `mkdir` command made a directory with the `mknod` syscall, followed by linking in the `.` and `..` directories.

The `mkdir` syscall originated in 4.2 BSD and was added to System V in Release 3.0.

alias

chapter 26

summary

This chapter looks at `alias`, a UNIX (and Linux) command.

`alias` is used to create names for commonly performed commands, scripts, functions, and combinations.

`alias` is a builtin command in `bash` and `csh`. There is also an external utility with the same name and functionality.

example

You can use the `alias` command to modify the `rm` so that it always displays an interactive query before deleting a file.

```
$ alias rm="rm -i"
```

Unfortunately, this alias can cause some scripts to fail (possibly including system scripts that were provided with your distribution). Any scripts that rely on the unmodified version of an aliased `rm` are likely to fail or produce strange results because of your alias.

A better alternative is to use an alias to a different, non-conflicting name. In this case, `del` might be appropriate.

```
$ alias del="rm -i"
```

overriding aliases

If you have set an alias on a command or utility, you can always run the raw

unmodified command or utility by typing the absolute directory path to the command. For example, if you set an alias to have `ls` always show hidden files, you can still run the regular `ls` by typing its full path name.

```
$ alias ls="ls -a" #modify the ls command
$ /bin/ls #run the raw ls command
```

Some system administrators always type out the complete path name for a command when using the root or superuser account to help prevent mistakes.

some common aliases

```
$ alias ls="ls -color=auto"
$ alias dir="ls -color=auto -format=vertical"
$ alias vdir="ls -color=auto -format=long"
$ alias ll="ls -l"
$ alias la="ls -A"
$ alias l="ls -CF"
```

no recursion

`alias` is not recursive.

If you set an alias, it can *not* be used inside the creation of another alias.

listing aliases

You can list current aliases by using the `alias -p` option.

```
$ alias -p
alias TYPE='cat'
alias DIR='ls -la'
alias COPY='cp -i'
alias REN='mv'
alias DEL='rm -i'
$
```

The environmental variable `$BASH_ALIASES` contains an associative array of all existing aliases.

unset an alias

The BASH command `unalias` will unset or delete a specific alias. Using the `-a` option will unset all aliases.

```
$ unalias alias_name  
$  
$ unalias -a  
$
```

pipes

chapter 27

summary

This chapter looks at pipes.

Pipes are most commonly used as a method to chain different utilities together, with the output of one piped to the input of the next.

history

Ken Thompson invented the pipe in 1972.

The pipe is a standard mechanism for allowing the output of one program or process to be used as the input for another program or process.

Pipes allow the UNIX philosophy of having many small programs that each do one function very well and then write scripts that combine these small utility programs to accomplish bigger tasks.

how to pipe

To pipe the output of one UNIX command or utility to the next, simply place the | (vertical bar character) between the two processes:

```
$ cat file01.txt | sort | lp
```

The example obtains the contents of the designated file, sorts the contents, and then sends the result to the printer.

scripts

chapter 28

summary

This chapter looks at scripts.

Scripts are the power tools for system administrators. Scripts allow you to automate tasks.

shell initialization files

When you start Terminal (or, in some cases, run `login`) the shell will run two initialization scripts:

```
/etc/profile  
.profile
```

Note that these are the file names for BASH. See the [login chapter](#) for the default initialization file names for other shells.

The `/etc/profile` initialization script is maintained by the system administrator and is the first initialization script run for all users.

Each user has their own `.profile` script in their home directory.

The `.profile` includes three basic operations (set terminal type, set path to commands, and set path to man pages) and any customization created by the individual user.

Before the initialization scripts are run, the shell is considered to be an *uninitialized shell*.

.profile

The `.profile` initialization script sets the terminal type:

For example: `TERM=vt100`

The `.profile` initialization script sets the path to the directory or directories that contains the commands and utilities.

For example: `PATH=/bin:/usr/bin`

Notice the colon character (:) is used as a separator between directories, allowing commands and utilities to be organized in many directories.

The `.profile` initialization script sets the path to the directory or directories containing the manual (`man`) pages.

For example: `MANPATH=/usr/man:/usr/share/man`

interactive and noninteractive

When you directly enter a command or commands and the shell performs the commands for you, that is the *interactive* mode.

You can also have the shell run scripts or commands in a *noninteractive* or *batch* mode. This is great for a system administrator automating a server or other large scale UNIX/Linux/Mac OS X system.

When an non-interactive shell (or subshell) finishes running a script, it exits.

making a script executable

Scripts are just text files with lists of instructions.

To make a text file into an executable script that you can run, simply type `chmod a+x filename`.

```
$ chmod a+x filename
$
```

Also, add the *magic line* `#!/bin/sh` as the first line in the text file. This special magic line tells the shell which program to use to run the script (in this case, the basic shell program).

Shell Files and Interpreter Invocation
File Extensions
from [Google Shell Style Guide](#)

Executables should have no extension (strongly preferred) or a `.sh` extension. Libraries must have a `.sh` extension and should not be executable.

It is not necessary to know what language a program is written in when executing it and shell doesn't require an extension so we prefer not to use one for executables.

However, for libraries it's important to know what language it is and sometimes there's a need to have similar libraries in different languages. This allows library files with identical purposes but different languages to be identically named except for the language-specific suffix.

scripting languages

Some of the scripting languages available on Linux and Mac OS X are: `sh`, `bash`, `perl`, `PHP`, `python`, and `ruby`.

Examples of running scripts in these languages:

```
$ sh scriptfilename
$ bash scriptfilename
$ perl scriptfilename
$ php scriptfilename
$ python scriptfilename
$ ruby scriptfilename
$
```

shell script example

Create a directory (folder) for your personal scripts called `scripts`:

```
$ mkdir scripts
$
```

Create a shell script called `script.sh` and save it in the new scripts directory (folder):

```
#!/bin/sh
echo "Hello World!"
```

Use the `chmod` command to make the new file an executable script:

```
$ chmod u+x /scripts/script.sh
$
```

Add the scripts directory to your command path:

```
$ export PATH="$PATH:~/scripts"
$
```

Run your new script:

```
$ script.sh
Hello World!
$
```

You can run your script directly in a specific shell:

```
$ rbash script.sh

$ sh script.sh

$ bash -x i
```

php script example

This example assumes that you have created the `scripts` directory.

Create a php script called `script.php` and save it in the new scripts directory (folder):

```
<?php
echo "Hello World!"
?>
```

Notice that we skip the `chmod` step.

Run your new script by running the `php` program with your script as the file to execute:

```
$ php ~/scripts/script.php
Hello World!
$
```

Note that the shell does *not* render HTML, so if you run a web script, you will see

raw HTML, CSS, and JavaScript as plain text in your terminal window.

You can run `perl`, `ruby`, and `python` scripts in the same manner.

There is more complete information in the chapter on [php and shell](#).

When to use Shell

from [Google Shell Style Guide](#)

Shell should only be used for small utilities or simple wrapper scripts.

While shell scripting isn't a development language, it is used for writing various utility scripts throughout Google. This style guide is more a recognition of its use rather than a suggestion that it be used for widespread deployment.

Some guidelines:

- If you're mostly calling other utilities and are doing relatively little data manipulation, shell is an acceptable choice for the task.
- If performance matters, use something other than shell.
- If you find you need to use arrays for anything more than assignment of `${PIPESTATUS}`, you should use `Python`.
- If you are writing a script that is more than 100 lines long, you should probably be writing it in `Python` instead. Bear in mind that scripts grow. Rewrite your script in another language early to avoid a time-consuming rewrite at a later date.

sysadmin and root/superuser

chapter 29

summary

This chapter looks at system administration and the root or superuser account.

As we look at more advanced features and commands, we need to become aware of the root or superuser account and capabilities and how to safely access that power.

sysadmin

In the UNIX world, the system administrator is often called the sysadmin.

root/superuser

The root or superuser account has total authority to do anything on the system. This power is great for fixing problems, but bad because one accidentally mistyped character could be very destructive. Some systems also have admin accounts of similar power.

Because of the potential for destructiveness, system administrators typically login with either a normal user account or a limited admin account for every day work and then switch to superuser or root only when absolutely necessary (and then immediately switch back).

The UNIX command for temporarily switching to root or superuser power is the `sudo` command, discussed in the [next chapter](#).

special powers

The root or superuser account has powers that “mere mortal” accounts don’t have.

The root account has access to commands that effect the entire computer or system, such as the ability to halt or shutdown the system.

The root account is not affected by read and write file access permissions. The root or superuser account can create, remove, read, or write any file anywhere on the system.

Some commands have built-in restrictions that the root or superuser can ignore. For example, the system administrator can change any user’s password without knowing the old password.

sudo

chapter 30

summary

This chapter looks at `sudo`, a UNIX (and Linux) command.

WARNING: Never trust any Terminal/Shell commands you find on the internet. Only run shell commands you understand. In particular, *never* run anything that includes `sudo` anywhere in the command line unless you are absolutely certain what the command does. When you run a command line with `sudo` you are giving permission to have complete (possibly destructive) control of your computer at the root level. And, yes, this advice applies even to this website. Don't run any commands with `sudo` unless you know for sure what you are doing.

sudo

The `sudo` command allows you to run a single command as another user, including at superuser or root level from a normal account. You will be asked for the password before the command will actually run.

This keeps you firmly in a normal account (with less danger of catastrophic failures), while still giving easy access to root or superuser power when really needed.

The `sudo` program was originally written by Bob Coggeshall and Cliff Spencer in 1980 at the Department of Computer Science at SUNY/Buffalo.

`sudo` is a concatenation of `su` (substitute user) and `do` (perform an action).

To run a single command as superuser or root, type `sudo` followed by a command.

```
$ sudo command
```

You will normally be asked for your password (exceptions listed below).

`sudo` can be configured to not require a password (very bad idea other than single user personal systems). `sudo` can also be configured to require the root password (rather than the current user's password).

On Mac OS X the `sudo` command will fail if your account has no password.

On Mac OS X the `sudo` commands password prompt will not display anything (not even bullets or asterisks) while you type your password.

You will not be asked for a password if you use `sudo` from the root or superuser account. You will not be asked for a password if you use `sudo` and the target user is the same as the invoking user.

Some systems have a timer set (usually five minutes). You can run additional `sudo` commands without a password during the time period.

run in root shell

To change to in the root shell, type `sudo` followed by the option `-s`. The following warning is from Mac OS X (entered a root shell and then immediately returned to the normal shell). Note the change to the pound sign (`#`) prompt.

```
$ sudo -s

WARNING: Improper use of the sudo command could lead to data loss
typing when using sudo. Type "man sudo" for more information.

To proceed, enter your password, or type Ctrl-C to abort.

Password:
bash-3.2# exit
$
```

other users

To run a command as another user, type `sudo` followed by the option `-u` followed by the user account name followed by a command.

```
$ sudo -u username command
```

To view the home directory of a particular user:

```
$ sudo -u username ls ~username
```

edit files in www

To edit a file (this example is for `index.html`) as user `www`:

```
$ sudo -u www vim ~www/htdocs/index.html
```

which password

On most systems, you will authenticate with your own password rather than with the root or superuser password. The list of users authorized to run `sudo` are in the file `/usr/local/etc/sudoers` or `/etc/sudoers` (on Mac OS X, `/private/etc/sudoers`). These authorized users are identified in the `sudoers` file as `admin`.

The `sudoers` configuration file offers a wide variety of configuration options, including enabling root commands only from the invoking terminal; not requiring a password for certain commands; requiring a password per user or per group; requiring re-entry of a password every time for particular command lines; never requiring re-entry of a password for a particular command line. The `sudoers` configuration file can also be set support the passing of arguments or multiple commands and also supports commands with regular expressions.

timeout

`sudo` can set timeout limits. This is done with the `timeout` option. This can be configured globally, per user, or per application. The timeout can be retained only per tty or globally per user. The user or application only has root authentication until the timeout occurs.

forgot to use sudo

Sometimes you type a command and forget that you needed to use `sudo` until you see the error message. You can type `sudo !!` to run the previous command with root privileges.

```
$ head /etc/passwd
head: /etc/passwd: Permission denied
$ sudo !!
```

to view unreadable directories

To view unreadable directories:

```
$ sudo ls /usr/local/protected
```

shutdown

To shutdown a server:

```
$ sudo -r +15 "quick reboot"
```

saving system file in vim

The ideal method for editing and saving a system file that can only be saved by the root user is to prepend the `vim` command with `sudo`. Then the `vim` command `:w` will work because the `vim` program was launched with root privileges.

```
$ sudo vim /etc/passwd
$ some editing commands
$ :w
```

So, what do you do if you start editing the file and then remember that you need root permission to save it? Add `!sudo tee %` to the `vim` save command.

```
$ vim /etc/passwd
$ some editing commands
$ :w !sudo tee %
```

usage listing

To make a usage listing of the directories in the `/home` partition (note that this runs the commands in a sub-shell to make the `cd` and file redirection work):

```
$ sudo sh -c "cd /home ; du -s * | sort -rn > USAGE"
```

view sudoers configuration

To view the `sudoers` current configuration settings, type:

```
$ sudo -ll
```

editing sudoers file

Run the `visudo` command line tool to safely edit the sudoers configuration file. You will be presented with the `vi` editing interface (this can be changed by setting the shell `EDITOR` environment variable to a different text editor, such as `emacs`).

Any syntax error in the `sudoers` configuration file will make `sudo` stop working globally. Therefore, always use `visudo` to edit the `sudoers` file. `visudo` also provides security locks to prevent multiple simultaneous edits and other possible security problems.

graphic equivalents

The utilities `kdesudo` (KDE) and `gksudo` (Gnome) provide a graphic user interface version of `sudo` (both are based on `sudo`). Mac OS X Authorization Services provides a graphic user interface with administrative privileges (but is not based on the UNIX `sudo`).

start a shell as root

If you need to do extended work as root, you can start up a root shell from your user account:

```
$ sudo bash
```

running commands as root

`sudo` only works for programs, not for any built-in commands. If you attempt it, you will get an error message stating `command not found`. The solution is to start a root shell:

```
$ sudo bash
```

security

The system can be set up to send a mail to the root informing of unauthorized attempts at using `sudo`.

The system can be set up to log both successful and unsuccessful attempts to `sudo`.

Some programs (such as editors) allow a user to run commands via shell escapes, avoiding `sudo` checks. You can use `sudo`'s `noexec` functionality to prevent shell escapes.

`sudo` never does any validation of the ARGUMENTS passed to a program.

`sudo` defaults to extensive logging, using the `syslogd` system log daemon to log all commands issued with `sudo` into a central host and local host file. This allows a complete audit trail of system access.

A system can be setup so that all machines in a system use the same `sudoers` file, allowing better central administration of a network.

trace

You can't `sudo strace ...` (fill in the rest of the command any way you want) because `sudo` can't gain its privileges while being traced.

polkit alternative

`polkit` (formerly PolicyKit) is an alternative control component for system-wide privileges.

In June 2009, Ken Milberg named this command as one of the Top 50 universal UNIX commands at this web page [Top 50 Universal UNIX commands](#). Note that this web page requires agreeing to be spammed before you can read it.

SUID/SGID

from [Google Shell Style Guide](#)

SUID and SGID are *forbidden* on shell scripts.

There are too many security issues with shell that make it nearly impossible to secure sufficiently to allow SUID/SGID. While bash does make it difficult to run SUID, it's still possible on some platforms which is why we're being explicit about banning it.

Use `sudo` to provide elevated access if you need it.

su

chapter 31

summary

This chapter looks at `su` (switch user), a UNIX (and Linux) command.

switch to another user account

You can use the `su` command to switch another user account. This allows a system administrator to fix things signed in to a particular user's account rather than from the root account, including using the user's settings and privileges and accesses rather than those of root.

who

chapter 32

summary

This chapter looks at `who`, a UNIX (and Linux) command.

The `who` command was described in the first UNIX book, *UNIX Programmer's Manual*, by Ken Thompson and Dennis Ritchie, published November 3, 1971.

list of who is using a system

The `who` command will tell you all of the users who are currently logged into a computer. This is not particularly informative on a personal computer where you are the only person using the computer, but it can be useful on a server or a large computing system.

Type `who` followed by the ENTER or RETURN key.

```
$ who
admin  console Aug 24 18:47
admin  ttys000 Aug 24 20:09
$
```

The format is the login name of the user, followed by the user's terminal port, followed by the month, day, and time of login.

which account is being used

The command is `who` with the arguments `am i` will tell you which account you are currently using. This can be useful for a system administrator if the system administrator is using the `su` command and wants to be sure about which the system administrator is currently using.

```
$ who am i
```

```
admin    ttys000  Aug 25 17:30  
$
```

A related command without any spaces, `whoami`, lets you know which account you are currently logged in with.

```
$ whoami  
admin    ttys000  Aug 25 17:30  
$
```

advanced file systems

chapter 33

summary

This chapter is an advanced look at UNIX (and Linux) file systems.

Some of the information in this chapter is a refresher carried over from previous chapters. Also, see the [chapter](#) on major directories.

Important reminder: Always use the root or superuser account sparingly. Do most of your work with an ordinary user account and switch to the root account only when needed. And then switch back as soon as possible. The `sudo` command can be used for temporarily switching to the root account to run a particular command.

absolute paths

It is common for a system administrator logged in to the root or superuser account to type out the absolute path to a command or utility. This will skip any aliases. This will also skip over any commands in the user's defined search path. This guarantees that the correct command or utility will run.

everything is files

In UNIX, everything is a file, even hardware devices such as printers, hard drives, and other devices. Even UNIX abstractions such as directories, pipes, and file redirection are treated as files.

Because everything is a file, the operating system can provide a common processing and communication interface. This is essential to the UNIX approach of using lots of small programs or utilities that do one job well and connecting these programs with shell scripts to do a wide variety of activities.

Linux takes the idea of everything is files even further than UNIX. Hardware devices have device files in the `/dev` directory on Linux.

man pages

Many forms of UNIX have a `man` page on filesystems.

```
$ man filesystems
```

If your system has this man page, you will find a general overview of UNIX file systems of all types, including CDROMs, floppy disks, and tape drives.

diskless

Almost every UNIX system has a root directory and file system, which is stored on one or more hard drives connected to the computer system.

There are diskless nodes. These are computers that don't have their own local hard drive. Diskless nodes run off a network server. Mac OS X makes it easy to set up a computer to run in this manner. This approach is often used when an organization wants central control of all of the computers in the organization, such as a computer lab at a school.

root directory

You can examine the contents of the root directory with the `ls -F /` command.

```
$ ls -F /
Applications/  Volumes/      mach_kernel.ctfsys
Desktop DB    bin/           net/
Desktop DF    cores/         private/
Developer/    dev/           sbin/
Library/      etc@           tmp@
Network/      home/          usr/
System/       mach-Kernal    var@
Users/
```

The above example is for Mac OS X 10.5.8 Leopard.

On many systems you will find a file called `unix`. This is the main UNIX operating

system kernel.

On some systems you will find `root.home`. This is a temporary file created when running Netscape as root. This would be an example of an application-specific file.

some important directories

The following is a brief description of some of the major directories. Not all systems will have all of these directories. This list has additional information beyond the similar list in the [chapter](#) file system basics.

/ The root directory of the entire file system.

/bin A collection of binary files, better known as programs. Many of the standard system commands are stored here.

/boot or **/kernel** The files needed to boot or start your computer.

/dev The devices connected to your computer (remember, everything, even hardware devices, is treated as a file in UNIX or Linux). Examples are the keyboard, disks, and printers.

/etc System configuration files, startup procedures, and shutdown procedures.

/home or **/users** The home directories for each user.

/lib or **/Library** Library files used by executable programs.

/net Other networked systems (again, treated as files).

/opt Third party software. In older systems this might be **/usr/local**

/private On Mac OS X, this is the location of the UNIX files. It is normally kept hidden from all users in Finder, but is visible in your terminal emulator and shell. Mac OS X has links to the major UNIX directories at the root level so that UNIX and Linux tools can find their files in the standard locations.

/proc Information about processes and devices.

/sbin System binaries (that is, system programs).

/tmp Space for temporary files. Required by all forms of UNIX. This directory is normally erased on bootup.

/usr User binaries (programs), libraries, manuals, and docs. Common subdirectories include online help (`/usr/share`), header files for application development (`/usr/include`), and system configuration files related to low-level

hardware (such as `/usr/cpu` and `/usr/gfx`).

It is rare that a system administrator would even look at the low level hardware directories, such as `/usr/cpu`. The system automatically manages these directories and their contents. It is unwise for a system administrator to modify these directories and their contents. Messing with these will almost certainly bring the system down and may require reinstalling the entire system.

/var Variable files. Some common subdirectories include X Windows files (`/var/X11`), system services files, applications related files (`/var/netcape`), system administration files and data (`/var/adm` or `/var/spool`), a second temporary directory (`/var/tmp`) that is not normally erased on bootup.

Swap Virtual memory on a hard drive. Allows the memory manager to swap some data and program segments to hard drive to expand the amount of memory available beyond the limits of physical memory.

For a more advanced and complete listing, see the [chapter](#) on major directories.

FAQs

You can find a FAQ (Frequently Asked Questions) file for all UNIX variants. Find the appropriate FAQ for your version of UNIX or Linux and look up the details for your system.

/etc

A key directory for new system administrators to learn is the `/etc` directory. The `/etc` directory contains key system administration files.

Because the `/etc` files change system behavior and properties, a system administrator spends a lot of time modifying and updating these files.

A new system administrator can learn a lot about UNIX by studying the files in the `/etc` directory. Do not change these files until you have figured out what you are doing. This is not the place for random experimentation.

A few key `/etc` files a system administrator should know.

`/etc/sys_id` is the name of the system. It may contain the full domain. Not used on Mac OS X.

`/etc/hosts` is the summary of the full host names. A system administrator will add to this standard file.

`/etc/fstab` is a list of file systems to mount on bootup. Mac OS X has

`/etc/fstab`.hd.

`/etc/passwd` is the password file. It includes a number of items of basic information on user accounts.

`/etc/group` is the group file. It contains details of all user groups.

`/var`

Another important directory for system administrators to know is the `/var` directory, which contains configuration files for many system services.

For example, the `/var/named` file configures Domain Name Service and the `/var/yp` file configures Network Information Service.

where to find answers

Surprisingly, there won't be a grand tour of the UNIX file system here.

A UNIX system typically has thousands of files. Maybe tens of thousands of files. A system administrator doesn't normally need to know what these files are or where they are located.

A system administrator should know where to find relevant information when a problem occurs.

Many system administrators keep a handy notebook with information on where to find answers to various problems. It is far more useful to know where to find correct answers than to know try to memorize all answers.

And don't forget popular search engines as a source for answers. There is very little chance that you are the first system administrator in the world to encounter a particular problem. A quick internet search should reveal many others asking for help on the same problem, along with answers.

hidden files and directories

Any file or directory that starts with the period or dot (`.`) character is considered hidden.

In MS-DOS (and Windows) and the original Macintosh, files and directories are hidden by setting a special attribute.

Mac OS X has a hybrid. When using the command line shell, Mac OS X acts exactly like any other version of UNIX. But when using the Finder, Mac OS X also recognizes the invisible bit. This is how the entire UNIX operating system is kept out

of the hands of the typical Mac OS X user.

Access permissions are separate from invisibility. In MS-DOS, a hidden file can not be written to. In UNIX, you can freely read and write and otherwise modify a hidden file.

In UNIX, file access is controlled by access permissions.

As a reminder from the `ls` chapter, the `-a` option will give a list of all files, including hidden files.

```
$ ls -a
```

Each user has a few important hidden files that configure their basic working environment when they login. These include:

- `.cshrc`
- `.login`
- `.profile`

major directories

chapter 34

summary

This chapter looks at some of the major directories (folders) on UNIX/Linux/Mac OS X.

directory listing

The following is a brief description of some of the major directories. Not all systems will have all of these directories.

/ The root directory of the entire file system.

/Applications On Mac OS X, this is the location of the Macintosh programs.

/Applications/Utilities On Mac OS X, this is the location of the graphic user interface based utility programs.

/bin A collection of binary files, better known as programs. These are the programs needed by the operating system that normal users might use. Many of the standard system commands are stored here. Contrast with **/sbin** below.

/boot or **/kernel** The files needed to boot or start your computer. Includes the bootstrap loader, the very first thing loaded when your computer starts. On Linux, it usually includes the Linux kernel in the compressed file `vmlinuz`.

/dev The devices connected to your computer (remember, everything, even hardware devices, is treated as a file in UNIX or Linux). Examples are the keyboard, disks, and printers.

/etc System-wide configuration files, startup procedures, and shutdown procedures.

/home or **/users** The home directories for each user. Contains such things as user settings, customization files, documents, data, mail, and caches. The contents of this directory should be preserved during operating system updates or upgrades.

Every new user account starts with a few basic files such as `.login`, `.cshrc`, and `.profile`. A system administrator may want to add additional customization such as an introductory README file.

/lib or **/Library** Shared library files and kernel modules.

/lost+found Files recovered during filesystem repair.

/mnt Mount points for removable media (floppy disks, CD-ROM, DVD, Zip drives, etc.), partitions for other operating systems, network shares, and anything else temporarily mounted to the file system. Linux and UNIX don't use Windows-style drive letters.

/net Other networked systems (again, treated as files).

/opt Optional large applications and third party software. In older systems this might be **/usr/local**.

/private On Mac OS X, this is the location of the UNIX files. It is normally kept hidden from all users in Finder, but is visible in your terminal emulator and shell. Mac OS X has links to the major UNIX directories at the root level so that UNIX and Linux tools can find their files in the standard locations.

/proc A Linux-only directory. Information about processes and devices. The files are illusionary. The files don't exist on the disk, but are actually stored in memory. Many Linux utilities derive their information from these files.

/sbin System binaries (that is, system programs). These are programs that general users don't normally use (although they can). This directory is not in the PATH for general users. Contrast with **/bin** listed above.

/root The home directory for the system administrator (superuser or root).

/tmp Space for temporary files. Required by all forms of UNIX. This directory may automatically be cleaned on a regular basis. This directory is normally erased on bootup.

/usr User binaries (programs), libraries, manuals, and documentation (docs). Common subdirectories include online help (/usr/share), header files for application development (/usr/include), and system configuration files related to low-level hardware (such as /usr/cpu and /usr/gfx).

/var Files that change, such as spool directories, log files, lock files, temporary files, and formatted (on use) manual pages. Some common subdirectories include X Windows files (/var/X11), system services files, applications related files (/var/netscape), system administration files and data (/var/adm or /var/spool), a second temporary directory (/var/tmp) that is not normally erased on bootup.

Swap Virtual memory on a hard drive. Allows the memory manager to swap some data and program segments to hard drive to expand the amount of memory available beyond the limits of physical memory.

Network File System (NFS)

chapter 35

summary

This chapter looks at Network File System (NFS) on UNIX/Linux/Mac OS X.

Network File System

The Network File System (NFS) allows a directory on one machine to be accessed from another machine. This is an important feature of UNIX.

The procedure for setting up the Network File System is called mounting.

NFS provides a seamless method to merge different file systems from different physical machines into a large shared structure. NFS works across different kinds of UNIX or Linux and even different kinds of processors.

With NFS, a user doesn't need to know or keep track of the actual physical locations of directories and files. The NFS files and directories appear to be a normal part of the file system and are accessed with the exact same methods as any local file or directory.

mount/export

The `mount` command will replace a local directory with a directory from another machine. Anyone viewing the mounted directory will see the remote directory as if it were local.

The `export` command is used to make a directory available for other computers to mount it.

The `/etc/exports` file contains a list of directories to be exported.

`mount` should be run from root.

availability

Network File System (NFS) was developed by Sun Microsystems in 1984 and is based on the Open Network Computing Remote Procedure Call (ONC RPC) system.

NFS runs on most UNIX and UNIX-like systems (including Solaris, AIX, Free BSD, HP-UX, Linux, and Mac OS X), as well as classic Macintosh, Microsoft Windows, Novell NetWare, and IBM AS/400.

Alternative remote file access protocols include Server Message Block (SMB, also called CIFS), Apple Filing Protocol (AFS), NetWare Core Protocol (NCP), and OS/400 File Server file system (QFileSvr.400).

tail

chapter 36

summary

This chapter looks at `tail`, a Unix (and Linux) command.

`tail` is used to report the last lines of a text file.

syntax:

```
tail [options...] [file...]
```

shells:	ash	bash	bsh	cs	ksh	sh	tcsh	zsh
File Name:	tail		Directory:	/usr/bin/			Type:	External

default

The default operation of `tail` is the last 10 lines of a text file to standard output (the example is from a file with less than 10 lines).

```
$ tail class="shellcodeblock"
#
# Configuration file for using the XML library in GNOME
applications
#
XML2_LIBDIR="-L/usr/lib"
XML2_LIBS="-lxml2 -lz -lpthread -licucore -lm "
XML2_INCLUDEDIR="-I/usr/include/libxml2"
MODULE_VERSION="xml2-2.7.3"

$
```

example: most recent user

Here is how to use the `tail` utility to show the last user created on the current system:

```
$ tail -1 /etc/passwd
```

number of files

You can use the `-n` option to set the number of lines, blocks, or bytes to output.

The option `tail -n1 filename` shows the last line.

```
$ tail -n1 xml2Conf.sh
MODULE_VERSION="xml2-2.7.3"
$
```

The `--lines=N` option is equivalent to the `-nN` option.

An obsolete format (still used on Sun Solaris, where the `-n` option is not supported) uses just the number of lines as the option.

```
$ tail -1 xml2Conf.sh
MODULE_VERSION="xml2-2.7.3"
$
```

number of characters

The option `tail -c8 filename` shows the last eight (8) characters (bytes).

```
$ tail -c8 xml2Conf.sh
-2.7.3"
$
```

Notice in the example that you only see seven characters. The newline character is the eighth character.

The `--bytes=N` option is equivalent to the `-cN` option.

An obsolete format (still used on Sun Solaris, where the `-c` option is not supported) uses the number of character followed by a `c` as the option.

```
$ tail -8c xml2Conf.sh
-2.7.3"
$
```

suppressing file names

If you provide `tail` with more than one file name, then it report the file names before the last lines of each file.

```
$ tail -n2 *Conf.sh
==>. xml2Conf.sh <==
XML2_INCLUDEDIR="-I/usr/include/libxml2"
MODULE_VERSION="xml2-2.7.3"

==>. xml1Conf.sh <==
XML2_INCLUDEDIR="-I/usr/include/libxml1"
MODULE_VERSION="xml2-2.7.1"
$
```
